THE COMPACT 72 ACRES on which Seattle's enthusiastic builders have erected the dramatic structures of their Century 21 Exposition comprise an exciting showcase for every conceivable kind of audio and visual display technique. From the ever-changing shapes and sounds of its International Fountain to the floating, three-dimensional "dream world" and on the world's largest projection screen, spread over the planetarium-dome of the U.S. Science Pavilion . . . there's imaginative use of sight sound.

The pre-opening report that concludes in these pages (see adjoining column) gives ample details about the work of producers like Fine Arts, Rarig and others. But what TIME called a "wonderland of color, movement, illusion and eye-popping exhibits," has something more to its credit. Eighty-five percent of its structures will form a permanent $50 million civic center, including the 608-ft. Space Needle, a 3,100 seat opera house, and the clean-lined 3½-acre Washington State Coliseum.

There will be factual films on screens continuously at the Fair, in addition to the journey-through-space-projections in the U.S. Science Pavilion. Nalley's, the Forest Products exhibit and an 800-seat Fair theater among others, will bring the world to the U.S. and abroad to their viewers, as well as the galaxies beyond. They should play to capacity audiences.

Seattle's problem is to accommodate the hordes sure to descend on these comparatively limited facilities. Generous nationwide publicity should easily assure the expected 10 million visitors during the Exposition's comparatively brief six-months' duration.

But Fair builders for New York's big show in 1964 can take a good many cues from Seattle's graceful, soaring arches and towers, her well-timed look into outer space and adroit use of color, dimension and imagination in sight sound techniques worthy of the name: *World's Fair*. See you at Seattle!

Communications Building offers a science show prepared by Bell System companies of Northwest.

Ford Invites Dealers and Salesmen to

Live it up with the Lively Ones!

Company's Ford Division Unveils New Sports Models Via Fast-Paced Wide-Screen Film Shown in 38 Cities

No Stickler for Tradition with a big new market in sight, the Ford Division has been splashing the pages and screens of the nation's mass media in recent months with a lot of "get hep" talk about four new models that emphasize the swing to sports car styling. Aimed at the growing membership of this "bucket seat brigade" are two new Galaxies, a Fairlane 500 Sports Coupe and a Falcon Sports Futura.

For its nationwide family of dealers and their salesmen, long accustomed to the traditional fall unveiling of new product, the Division had a surprise in store. With agility, it gathered these tens of thousands of men along the sales front into deluxe motion picture theatres coast-to-coast, spread the curtains wide to unveil the now familiar campaign theme, *The Lively Ones* in its initial format: a colorful, tuneful wide-screen motion picture produced by Wilding, Inc.

The dealer-salesmen announcement program went off in just two weeks, thanks to the well-synchronized efforts of six presentation crews from Wilding. To assembled, enthusiastic dealer audiences, it must have looked like fun as they viewed the new models in appropriate settings and sequences as sports-minded and fast-moving as the cars themselves.

But this Spring Sales Rally program, interspersed with frequent remarks by meeting leaders at each session, came out of the rich reservoir of manpower, equipment and facilities of the producing company. For this job, *days* had to be counted like the *months* that a show like this ordinarily merits.

Sequences follow daredevil "sky divers" out of their planes high over Florida, take viewers down the step slopes of the high Sierras with skilled skiers and ride the coasters of an amusement park as appropriate settings for the *Lively* new Ford line. Titles and animation are in keeping, the soundtrack's tempo syncopated to the beat of "hot" engines. Ford's sales force came away happy and so will viewers of a new 8mm sound version which dealers will show on their new Fairchild repeater sound projectors now going into showrooms across the land. A special 11-minute 8mm version of *The Lively Ones* has been prepared by Wilding for showroom exhibition to prospects; Ford salesmen will also carry Fairchild 8's for showings in prospects' homes.

Milwaukee Hosts IAVA's Annual Meeting

Well-Attended Sessions Cover Many Fields of Management Interest as Industrial Audio-Visual Executives Exchange Views, Hear Technical Papers, Elect Officers

MEMBERS OF the Industrial Audio-Visual Association were well represented at the Annual Meeting of this organization of leading audio-visual executives within U. S. industry, held at Milwaukee's Hotel Pfister on April 24-26th. Billions of dollars in sales volume were represented by the score or more of companies whose a-v men participated in the well-filled program of reports and talks on many phases of communication media.

James Craig of General Motors was elected president of IAVA for 1962-63, succeeding Ken Penney, 3M, who received the organization's Plaque Award of Merit for his services as retiring chief executive.

Elect Connelly, McCaslin Vice-Presidents

William Connelly, Union Carbide, is the new first vice-president, succeeding Willis Pratt, AT&T, in that post; Robert McCaslin, Caterpillar Tractor, is the new 2nd vice-president and was named to head the Annual Program arrangements for the 1963 Annual Meeting.

Incumbents who will continue in their present offices are: John Hawkinson, Illinois Central Railroad, who is IAVA's vice-president for Illinois (its home state); Harold Daffer, Minneapolis-Honeywell, is secretary, and Don Peterson, Caterpillar Tractor, is assistant secretary. Fred Woldt, accorded a unanimous vote of "thanks" for his exemplary services as treasurer this past year, continues in that position for 1962-63.

Regional Directors for the Year Ahead

Regional directors of IAVA are: Charles Woehrle, 3M Company, for the Northern Region; Jack Flynn, Union Carbide, for the East; Jerry Curto, Santa Fe Railway, Central regional director; Ira Thatcher, United Airlines, Western regional director; and Joseph Stanalind, Southern Bell, is IAVA's regional director for the South.

Milwaukee program arrangements were made by Richard Piasecki and Henry Serdy of Allis-Chalmers; Russell Einwalter, Allis-Chalmers' Tractor Group photographer and Clarence Hansen, Supervisor of Photo Services in the same company photographed the annual meeting proceedings.

New Members Represent Six Companies

Among the new members introduced by IAVA membership chairman, Larry Warnock of Link-Belt, were Herbert DeLong of Pennsylvania Bell and the Diamond State Bell Telephone Companies; Tom Barnidge, Ralston-Purina company; Eugene Frein, Metropolitan Life; Henry Stolte, Chas. Pfizer Co.; Jack Hansen, Johnson & Johnson; and Alan Tulk, Dow Chemical Company.

Ken Penney (left) joins Past Presidents' ranks and receives Association's Plaque Award from another IAVA Past President, O. H. Peterson.

K. W. Haagensen, Director of the Public Relations Division, Allis-Chalmers, made the welcoming address. His remarks were followed by an audio-visual demonstration and film showing (*Just a Foreman*) presented by A. V. Gaulke, Manager, Methods Improvement Service, Allis-Chalmers.

Technical demonstrations on the opening day program included those of John Van Osch, Line Material Co. ("A New Method of Converting Optical Projectors to Play Back Magnastripe Sound Tracks"); and Don Lea[r], Janker Business Machines Corp. ("How [to] Cut Slide Retrieval Time by 600%"). R[o]bert Sogge, Director of Consumer Services, Ma[g]nasync Corp., demonstrated that company's "[Re]Kard" system, involving magnetic playback [of] print material. George T. Keene, Color Tech[-]nology Division, Eastman Kodak Comp[any] explained "Commercial Systems for M[a]gnetic 8mm Prints" and Kodak's Gene Weber [was] also on hand to present company's new [Ma]gnaflex Special 16mm Camera.

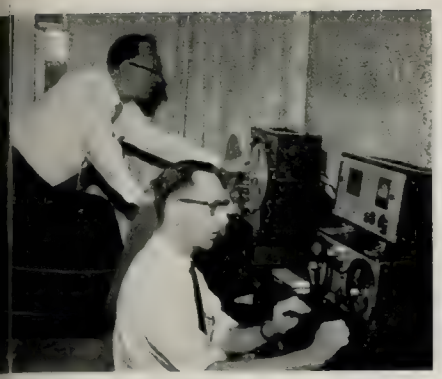
Robinson P. Rigg, IAVA's honored guest, o[n] evening, addresses annual dinner gatherin[g] Jim Craig and Ken Penney pay rapt atte[n]

Local Distributor Cites Film Experienc[e]

A program event that drew conside[r]able floor participation was Jean Larson's il[lu]minating talk on "Film Distribution from th[e] Standpoint of a Local Distributing Age[ncy]." Miss Larson is operational head of [Mo]Films, leading Milwaukee film library [and] sponsored film distributor.

The entire Wednesday afternoon pro[gram] was moderated by O. H. Peterson, an I[AVA] past-president, (American Oil Company). Peterson introduced a "workbook" pre[pared] by ten IAVA members for organization[al] within their respective companies and a[ll] groups to whom informational talks or a-v communication are frequently made. Par[ti]cipants who helped prepare the work-[book] papers are all members of the Central Re[gion].

Outlining A-V Procedures to Managemen[t]



Two key program events on the final [Wed]ing day were Alden Livington's presentati[on] "How to Outline A-V Procedures and A[-V]

Shirtsleeve conclave: IAVA members are picture of concentration during one of many "working sessions" at Association's meeting in Milwaukee.

Speaker's table includes l to r): Dick Piasecki, Bill Connelly, pres[ident] Jim Craig, past pres. Ken Penney, speaker R. P. Rigg, and O. H. Pe[terson]

Hits at Milwaukee (who won deserved plaudits on meeting arrangements) were Henry Serdy (l), & Dick Piasecki (r) shown checking program tapes.

Informal discussion during "breaks" provided members the useful exchanges of experience which are among most useful benefits of membership.

Annual dinner companions (left to right) are Mr. and Mrs. Alden Livingston, of Wilmington, Del. and Mr. and Mrs. Paul Dowty, of Evanston, Illinois.

Another dinner trio — as Mr. and Mrs. Bob McCaslin, of Peoria are pictured at annual banquet with a smiling Frank Rollins, Squibb & Sons, N. Y.

proaches to Your Management" and the presentation by L. T. Adams, Ford Motor Company, of "An Extensive and Intensive Application of 8mm Sound Films as a Direct-to-Consumer Tool. Mr. Adams showed the 8mm sound use of Ford's recent Spring promotional film *The Lively Ones*, which the company's dealers are showing to prospects on the Fairchild 8mm Sound Repeater projectors.

Renew Aid to "Recordings for Recovery"

An event that upheld an IAVA tradition which began last year was the presentation to Alcoa's Ralph Hoy of a contribution from IAVA toward Mr. Hoy's famed "Recordings for Recovery" program. This personal effort by Mr. and Mrs. Hoy brings tape recordings

Alcoa's Ralph Hoy (left) receives contribution from Ken Penney on behalf of Recordings for Recovery, Inc.

of music gathered from around the world to shut-ins in hospitals and other institutions. Through this support program, IAVA has "adopted" this program as one of its annual projects.

Guest of honor at the Annual Banquet and an informal speaker was Robinson P. Rigg, industrial film columnist on the London FINANCIAL TIMES in England and International Correspondent for BUSINESS SCREEN. Peter Rigg's column, written during his extensive U. S. visit, appears elsewhere in this issue.

The next IAVA national meeting will be held this fall (in the East) with Frank S. Rollins, Squibb & Sons, as Program Chairman.

* * *

The Spirit of "Sharing" at IAVA

☆ During the decade and more in which we have enjoyed the privilege of Industrial Audio-Visual Association membership, we have seen a good many of its fellows rise to important posts in the top echelons of their companies. All of these, and every active "worker" in this society, are most heartily agreed that *the unselfish sharing of experiences*, the frank exchanges of "know-how" which highlight both national and regional gatherings, has brought *to them and to their companies* manifold rewards, helping achieve more resultful use of these vital tools of audio and visual communication in which they are truly specialists.—OHC

Retiring president Ken Penney (3M) congratulates incoming president James Craig (General Motors).

Officers-Elect seated, l to r): John Hawkinson, Jim Craig, Bob McCaslin. (Standing, l to r) Joe Stanalind, Harold Daffer, Don Peterson, Bill Connelly, Fred Woldt, and Ira Thatcher.

Greeting new members is Larry Warnock (at left) as representatives of Dow Chemical, Johnson & Johnson, Metropolitan Life, Pennsylvania Bell, Chas. Pfizer and Ralston-Purina joined IAVA.

Make It Worth While proves how a standard approach . . . made by phone or in person . . . can sell the appointment to all types of prospects.

Selling Benefits trains men to see that there are only two types of objections — valid and invalid and just two valid objections.

Prospects for Success come to a man from various sources; qualified lists are the agent's first need. **Below:** Better Selling series tells that organized sales approach can be memorized, yet made to sound natural, spontaneous.

TRAINING MEN TO SELL

New, Basic Audio-Visual Sales Course Created by Better Selling Bureau

Designed to Meet Lag in Insurance Agent Training and to Curb Turnover

PEOPLE ARE INVESTING more heavily than ever before in various forms of life insurance, and the constant need for training more men into effective life underwriters has become a primary problem with most insurance company executives.

Since selling an intangible is the most difficult of all types of selling — calling for exceptional skill — it is generally recognized that teaching the art demands an equal degree of skill, plus infinite patience. To have every detail in the training of agents shown in pictures and on records is a service which trainers have long awaited.

Now it is available — in six sound slidefilms produced in color by Rocket Pictures for the Better Selling Bureau, under the series' title: *How to Sell Life Insurance Successfully.*

Training to Match Streamlined Operation

While insurance companies continue to make great strides in the streamlining of policies, and more effective employment of advertising, one area in which improvement has lagged is in agent-training. Incomplete preparation inadequately applied by agents when they get into the field — leads to heavy turnover and a waste of manpower that all training directors deplore.

Though a few giants in the industry could create Audio-Visual courses for their own use in training, the undertaking was too costly and made demands of a too highly technical nature for most companies to consider.

The prob'em was brought to Dick Westen, President of the Better Selling Bureau — a sales agency specializing in recruiting, training, and consumer-selling slidefilms for insurance. Convinced that a crucial need did indeed exist, Dick accepted the challenge to create a complete agent-training course incorporating the tested methods of the country's top training experts.

On the theory that *"where excellence begins, competition ends,"* over a year was devoted to the scripts and production. Extensive consultations with vice presidents in charge of sales and training in a number of life insurance companies, and with experts noted for their success in building career-type agents, have brought extraordinary vitality to this training course.

Virtues of Clarity, Directness, Brevity

Already in practical daily use in various sections of the country, this new Audio-Visual training is proving its effectiveness. The filmed instruction — with the virtues of clarity, directness, and brevity — gains high mental retention by the trainees. Men readily understand *what* to do, *how* to do it, and *why* it must be done — for resultful selling.

Individual slidefilm titles: *Your Prospects for Success, Make It Worth While, Talk About Money, The End and The Beginning, Selling Benefits,* and *Keep Them Satisfied* . . . parallel the recognized steps to successful selling: prospecting, making the appointment, the presentation, the close, meeting objections, and personal delivery of the policy.

A Complete Blueprint for Success

Trainers who have long adhered to the established P-E-S-O-S principle — *Prepare, Explain, Show, Observe, Supervise* — will endorse the way this course incorporates the method, and provides motivation, participation, application, and a means for measuring progress.

In the graphic Audio-Visual instruction men are motivated to want to learn; the training is so arranged that they take an active part; the films show how the facts learned are to be applied in the field; and the conference-type meetings with questionnaires enable the men — as well as the trainer — to measure the degree of progress achieved.

To keep pace with the sales potential, insurance sales training now requires more intensive programs, if maximum results are to be realized.

Meeting Guides Increase Trainer's Power

Every word and act called for on the part of the trainer is presented in detail in the trainer's manual . . . pre-film-showing comments, ideas for trainee-participation in round-table meetings, follow-up material for additional inspiration . . . to reduce time-consuming preparation yet develop agents thoroughly equipped for effective selling.

The objective is to build underwriters who enjoy their work — because they *know* their work; agents able to earn good commissions that stimulate enthusiasm and represent a comfortable scale of living . . . men who feel a sense of responsible service to their communities.

Training *is* a Rewarding Experience

And, just as the successful underwriter enjoys knowing that his work helps clients meet the uncertainties of life without financial disaster, so the man who trains and supervises such underwriters collects rich satisfactions when he is able to see the benefits men acquire through his conscientious training.

Here is additional evidence that Audio-Visual instruction — when painstakingly developed — brings accuracy, speed, and thoroughness to sales training. In this vivid new series — where every action is pictured, every step is explained — trainees assimilate the essential techniques with the clarity and streamlined accuracy which only Audio-Visuals can provide.

he Purple Turtle" Captures

The Sights and Sounds of rt Among the Very Young

ONSOR: The American Crayon Company

TLE: *The Purple Turtle*, 13½ min, color, produced by ACI Productions, Inc.

The National Kindergarten Association, de-ated to the promotion of kindergartens for the nation's children, has long cherished the a of a film which would capture the in-sity, delight and skill with which four and e-year-olds take to paint and crayon. Its sident, John H. Niemeyer, feels, as do other fessionals in early childhood education, t among the many activities in a good kin-garten program, art is one of the most im-tant means of development.

In response to the need for a film document-children's art, and as a service to art cation, the American Crayon Company has

The faces of these young artists make memor-e scenes in Roccos' "The Purple Turtle."

uplied the funds for production of this ex-rdinarily fresh new film, *The Purple Turtle*, n is now underwriting its distribution na-idally — through Association Films, Inc.

roducer-director-camerman Stelios Roccos, ed of ACI Productions, spent a year in photographing children with their paints and ons in schools in New York and Califor-nia Intercut with his wonderfully impromptu ive action shots are pictures selected from the National Kindergarten Association's col-ecion of some 12,000 pictures, made in kin-dergartens all over the country, for its 50th niversary exhibitions. These are coordinated wi the taped conversations of the children in with rhythm of the musical score, by Richard Werneck.

working for naturalness in the film, Stelios Roccos used no tripods or other bulky equipment that would interupt normal class-room activity. He shot the film with a hand-held Arriflex, and only small floods were mounted in ceiling light sockets in the class-rooms. His introduction to a group of children was as a visitor and they were allowed to play with his camera. Ceiling lights were lit for several days before actual photographing took place, so that the young artists could get used to them. Once the relationship had been established, and the children hard at work, they became too absorbed to notice the camera. That is, most of them. Stelios Roccos says that in every group there was the born mechanic, even at five years, who trailed him with advice and reminders, such as "Hey, Mr. Roccos, you forgot to plug in the light, push the button, etc."

The Purple Turtle should be of interest to PTA and other groups working in communities for kindergartens, early childhood art education classes, etc. The film's entertainment value should also make it suitable for theatre or TV use.

Stelios Roccos is a native of Greece and graduate of the American Junior College there, as well as Cambridge University. His film, *Navajo Silversmith*, won a first prize at the American Festival and represented the United States at the Venice Film Festival. *The Purple Turtle* is also a selection of CINE to be shown at European film festivals this year.

Cruising in excess of 600 miles an hour, American's 707 Astrojet is the fastest airliner in the sky.

Picture of Power: The 707 Astrojet

New Color Film, Destined for Widespread Showing, Documents the Pioneering Efforts of American Airlines, Pratt & Whitney and Boeing in Development of Fast Transport

SPONSORS: American Airlines and Pratt & Whitney Division of United Aircraft Corporation.

TITLE: *The 707 Astrojet*, 12 min, color, produced by Audio Productions, Inc.

☆ The Boeing 707 is a familiar friend to most of today's air travelers. It has provided them with the utmost in speed, comfort and economy. But American Airlines wanted more from its 707's — more power for higher cruising speed to stay on schedule or make up time, if need be; and more power for faster take-offs and landing runs.

Combined Effort of Three Companies

This film documents AA's pioneering project with Pratt & Whitney and Boeing to achieve better air transportation — the 707 Astrojet, which has an increased climb thrust of over thirty per cent, and which cruises at over 600 miles per hour.

The film combines clever studio shots of an artist sketching the operation of the turbojet and the new fan-jet engines with on-the-spot scenes in Pratt & Whitney's East Hartford plant, and the Boeing west coast plant, where the new engines and the modified airframes were finally married into the superb 707 Astrojet.

Design Has the Lines of Powerful Fish

Strangely, the film points out, modern aircraft are modeled less on the birds of the air, more on the fish of the sea. For the new aircraft does look strikingly like a powerful fish with a ventral fin beneath the tail.

American Airlines, and Pratt & Whitney, plan widespread distribution throughout the country.

Scenes in the Health Insurance Institute's realistic documentary film of medical science progress show viewers latest developments in health care which member programs now make attainable to many.

Medical Marvels Within Reach of Millions

MPO Cameras Probe Hospitals, Laboratories to Bring Latest in Medical Science to Screen in This Timely Documentary Sponsored by Health Insurance Iinstitute

SPONSOR: Health Insurance Institute.

TITLE: *Dialogue With Life*, 26 min., b&w, produced by MPO Productions.

IMPROVEMENTS IN HEALTH care during the past 20 or 30 years had a profound effect on the well-being of most of us today. Antibiotics, new surgical techniques and life-saving hospital equipment have added years of health to our life span.

But these improvements in health care are often as expensive as they are efficacious — beyond the capabilities of the uninsured bank balance. *Dialogue With Life*, a new film produced by the Health Insurance Institute, shows how new and more flexible forms of protection have brought the very best medical care within the means of almost all of us.

Scenes of Heart Operation, Betatron Unit

The 26-minute documentary, which features Burgess Meredith as narrator, was produced by MPO Productions and filmed on location in New York and its hospitals. The film is highlighted by scenes of a delicate open heart operation, a cancer-fighting betatron unit in action, and a birth in a modern hospital delivery room.

The picture reflects a fresh approach taken by the MPO producer-director-writer-photographer team of Lloyd Ritter and Murray Lerner.

Taped Interviews Add to Its Realism

To achieve a most realistic quality in the film, the script is built around taped, on-the-spot interviews with segments of the public connected with health care; with physicians comparing health facilities of today with those of 30 years ago; with men-on-the-street defining "good health"; with an eight-year-old boy undergoing treatment, describing his reaction to the hospital.

The result is a very *human* film that shows what the average adult thinks about health, what he expects from modern health care and how he plans to pay for it.

Dialogue With Life has been designed for presentation before all types of public groups and can be booked through all offices of Modern Picture Service, or the Health Insurance Institute, 488 Madison Avenue, New York.

A Palatable Picture Abou "Vitamins and Your Healt

Presented by The Vitamin Foundatio

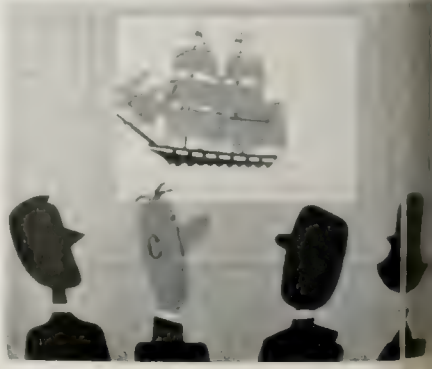
SPONSOR: National Vitamin Foundation

TITLE: *Vitamins and Your Health*, 18 i produced by Visualscope, Inc.

The National Vitamin Foundation, wit membership of pharmaceutical companies manufacture and market vitamin prod often finds it necessary to answer the do objections and general lack of understar of the public toward vitamins.

One means of meeting this need for p education is a new film, *Vitamins and Health*, recently completed for the Found by Visualscope, Inc., New York. This minute motion picture, written by Stan Sobel, and produced in filmagraph techn explains why vitamins are needed by the h body and why the average person should sider the use of a vitamin supplement. The shows the gradual conversion of the av viewer, symbolized by a silhouetted shado the benefits and necessity of vitamin the

He Isn't "With It" as Narrative Begin



The opening sequence finds our ma tempting to beat a hasty retreat from his in the audience as we witness an encoun sea between two ships during the first h the 19th century. Knowing sailors of on help restore health to the other crew foll a scourge of scurvy by offering them vit filled fresh onions and potatoes. This se topic and tone of the film.

A humorous sequence follows in wh professor attempts a pseudo-scientific disc course on vitamins. Our bored and imp viewer, interested simply in knowing wh or not he should take vitamins, cuts the professor short — unable to be restrained b narrator.

Vitamin Facts in Understandable Term

Giving in to the necessity of a "straight proach in understandable language, the rator covers in detail the discovery and tification of vitamins — and their uses. S on by the viewer, the narrator explains th of vitamins. He describes how they not

Opening sequence from "Vitamins and Health" shows how vitamins help overcome

mbat disease, but help the body grow and nction properly, promoting a state of com-ete physical, mental and social well-being by pplementing the diet.

The nature and consequences of a vitamin ficiency and the relationship of such a ficiency to food intake and personal vitamin quirements are also described. The neces-ssity for daily vitamin supplementation is essed along with the wisdom of consulting a ysician on vitamin needs. Vitamins are com-red with insurance-protection for day-to-day alth as well as for future health. All through s, our viewer asks all the questions and rais-all the obvious objections.

He's Sold on Vitamins . . . Asks a Rerun

The film ends on a whimsical note as our old-on-vitamins" viewer asks for a review the film's pointers so he can pass them along his wife. He then asks to see the beginning the film which he had missed while attempt-to walk out. The end comes as we once in watch the encounter of the ships at sea. *Vitamins and Your Health*, is being made ilable through individual member compan-of the National Vitamin Foundation. xperiments demonstrated in the film show CAPLA (Centrally Acting Pressure Low-g Agent) exercises its effect through the ral nervous system, and thus is a truly ue antihypertensive.

he motion picture, *CAPLA*, has aroused h professional interest in the past few ths. It was displayed recently at the Amer-a Society of Internists convention in Phila-hia.

The public health nurse detects an infection hazard during a routine visit and initiates chain of events that lead to its containment . . .

The nurse as a disciplinarian and teacher, warns a lab technician not to take blood test equipment used on infected patient to other hospital areas.

Helping the Hospitals to Fight Infection

Stressing Cleanliness, This Picture Shows "Role of Nursing in Infection Control"

SPONSOR: Armour & Company (Dial Soap)

TITLE: *The Role of Nursing in Infection Control*, 20 min, b w, produced by Dynamic Films, Inc.

☆ Nothing beats good old-fashioned cleanliness for control of common infections. This is the message of a new film made by Armour for the American Nurses Association — American League for Nursing. Completely non-commercial in a brand-name sense, the film explains the importance of thorough hand-washing as the most important method of preventing the spread of infection.

The public health nurse in this dramatic film opens a chain of events which leads to the discovery of a case of staphyloccal pneumonia. Later, in the hospital the patient is placed in an isolation unit, and hospital nurses begin the painstaking job of confining the infection while the cure begins. Linen must be handled with extreme care — everything that goes into or out of the room must be carefully cleansed. Rules must be established and observed without the slightest deviation.

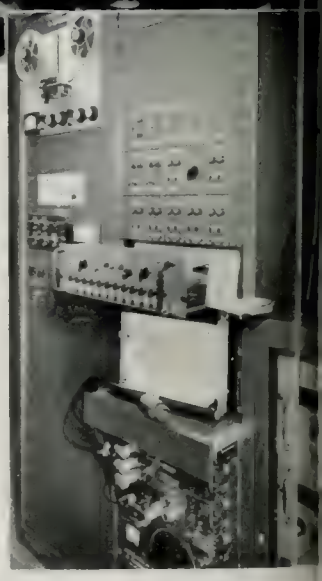
"Staph" infections have been an increasing problem in hospitals — this film is timely in showing the best working methods for treatment and containment.

Marion Cleveland, Director of Nursing Service at Columbia-Presbyterian Hospital, New York (left) served as consultant on hospital nursing content.

In this lecture room scene in picture, the nurse is shown in another of her many roles: as a student.

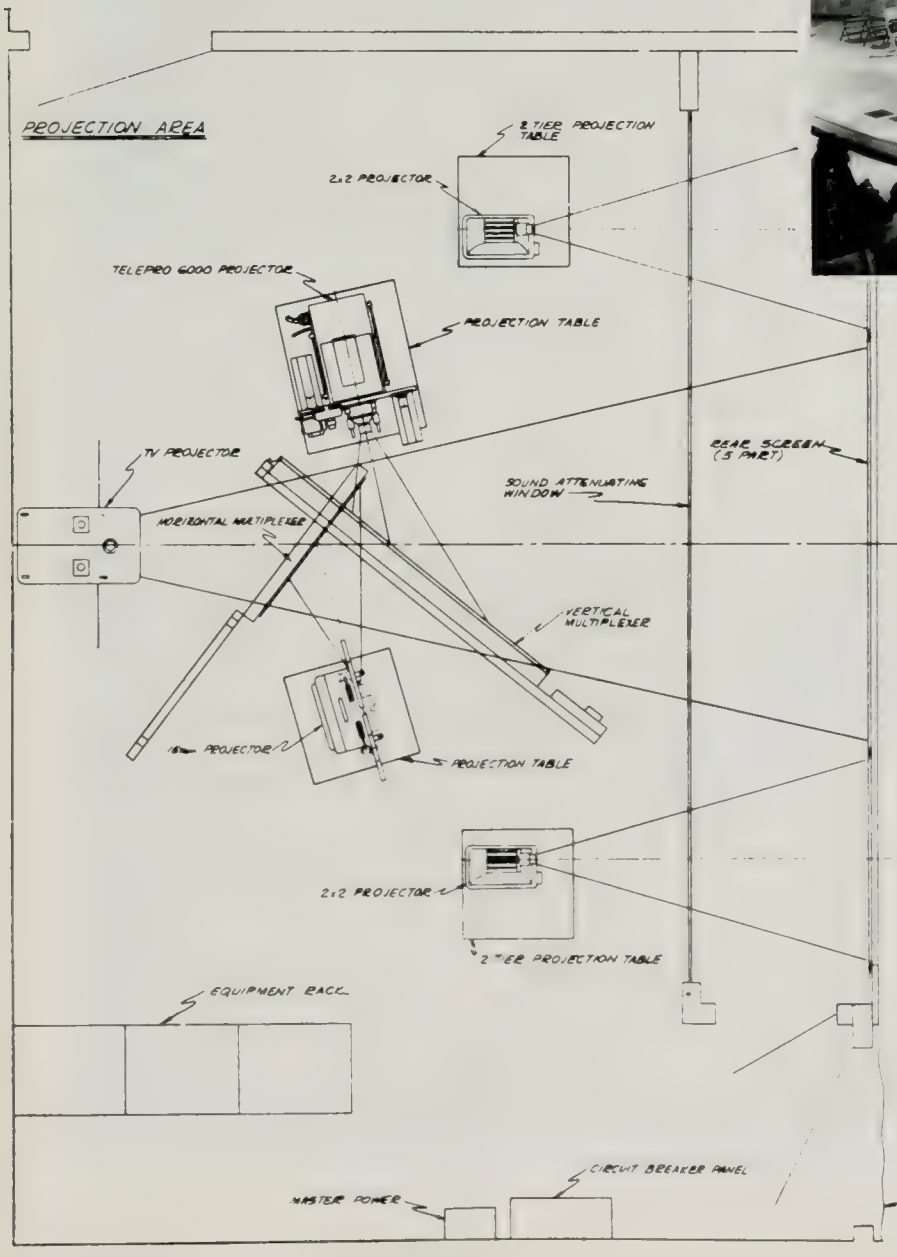
NEW CONCEPTS FOR COMMUNICATION

Integrated Audio-Visual Techniques in "Communitronics" Developed for the Space Age Are Being Carried Over to Help Industry and Schools Meet "Explosion in Information"

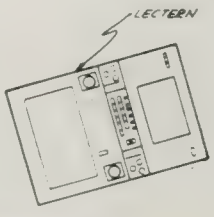


MAJOR BREAKTHROUGHS in the interchange of information, ideas and knowledge began to take shape in World War II. In the first great "laboratory" of audio-visual research and production, synthetic devices, films and a wide range of a-v tools were created to meet the needs of technological warfare, the training of millions for the maintenance and operation of a vehicular war and for the orientation and educational tasks of multi-lingual fighting forces.

This is the time of a "second revolution" in communication. Military urgency remains undiminished as new advances are achieved in modern weapons systems, missiles and rocketry. Dependence on electronic computing devices puts multi-million dollar installations in the hands of buck privates. In a *science*-conceived world of space-age technology, both concepts and devices remain *man*-oriented. The basic problem of person-to-person communication was never more acute, nor more complex.



And the military is not alone in its world of weapon-complexity. Computers are industry built, installed by civilians and the counterpart of the military computer controls the factory production line, supplies inventories and market data, will soon store the nation's taxpayer's records. Inform tion that is the lifeblood of worker, the serviceman and salesman must keep pace with atom, the transistor and beyond



Today's awesome informa explosion must also cope with ploding populations. Classro teaching, where the whole pro of imparting and preparing le

Diagram at right shows floor plan of typical multi-screen, rear projection installation with its ever sion, slide, and motion picture projectors integrated for automatic operation by remote control from buttons on lectern panel at right.

in a space-age must begin, s a tremendous challenge, as he training centers within in- ry itself.

an the civilian profit by recent lopments in commnication nique within the armed forces? ompanies like the TelePromp- Corporation who have been ly engaged in developing and ying electronic communica- equipment and techniques military and government pur- s believe they can. In fact, PrompTer is well along in ing the military-civilian gap what it calls "communitron-

laborate installations for brief- conference and training use in places as the Air Force Com- d Post and the Chief of Naval rations' Flag Plot Room in the agon helped pioneer new prin- s with multi-screen techniques, combinations of projection closed-circuit television.

he Air Force Command Post, example, is one of the most sticated visual display sys- in existence. In three different s, available to various com- d echelons, 20 projectors, screens and a variety of re- controlled random-selection es enable maps, charts, dia- s and background informa- o be called up almost instan- usly for study or reference. I similar installations, like the 's Ordnance Guided Missile ol at the Redstone Arsenal, ama, educators and trainers profit by experience. Faced the necessity of cramming mounts of complicated data embryonic space-age soldiers he shortest possible time, S uses closed-circuit tv, tape, TelePrompTer reading and TeleMation automatic control to achieve reduc- tions of up to 30% in training time.

Carry-over has begun as the University of Wisconsin enters the second year with its "TeleMation Laboratory" program (featured in BUSINESS SCREEN). The new electronic instruction center at Chicago Teachers College North has a 673-seat auditorium that utilizes multi-screen rear projection techniques, digs into student understanding of subject matter through its push-button "classroom responder" system at each seat.

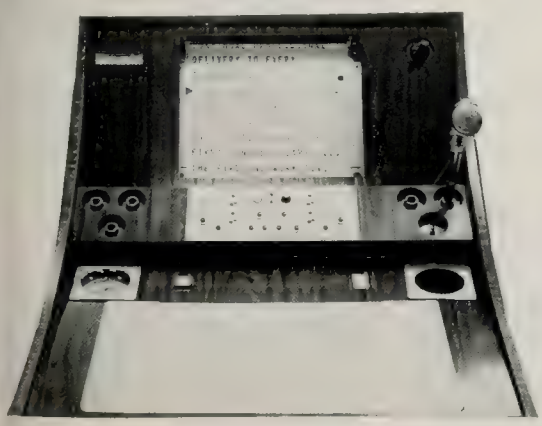
Thus far, application of these techniques in the world of business and industry has taken two main directions. One is the installation of "communications wall" facilities in executive offices and conference rooms, as at American Airlines' recently-completed system in its headquarters board room.

Kaiser Industries, Equitable Life, Humble Oil, Tennessee Gas Transmission Company are among other companies currently utilizing or discussing space and design facilities to accommodate integrated audio-visual systems.

A second type of business application is represented in the project undertaken by Holiday Inns of America, fast-growing motor hotel chain, which provides for installation by the end of 1962 of more than 100 portable, standardized audio-visual "packages" in meeting rooms of key motels. These involve multiplexing of large-screen television, slide and motion picture projectors upon a single screen.

Because of their standard components, these systems can readily be combined into an "instant network" industry closed-circuit telecasts and should prove a boon to organizations who want to "travel" audio-visual presentations without shipping heavy gear from city to city. Business will welcome it.

The Quartermaster General's Room in Washington, with its multi-screen installation, is typical of military briefing, and presentation facilities.



Holiday Inns of America are installing standardized "Communication Center" packages at 100 Inns throughout U.S. System includes slide, motion picture and portable large-screen television projectors (at left above).

Above: this multi-screen installation was recently completed in Board Room at American Airlines' headquarters building. **Below:** the company executive's "office of tomorrow" contains a rear-projection screen for showing slides, motion pictures or television programs when needed.

Speakers or trainers can control their own effects — visuals, sound, curtains or lights — from push-button panel mounted on the lectern.

Aerial scene from "Invitation to Kentucky" shows fast-growing chemical complex at Calvert City.

Films Help Kentucky SELL Travel, Industry

Commonwealth's Department of Public Information Finds "Movies Better Than Ever" as Films Promote Tourism in 42 States; One Picture Aimed to Attract New Industry

VIEWERS ALL OVER the country are learning more and more about Kentucky through motion pictures, and the state's Department of Public Information is rapidly turning to films as a medium for promoting Kentucky's "Vacation Wonderland."

Two travel films distributed by the Department's Division of Tourist and Travel Promotion have been seen in 42 of the 50 states in the past five years. These 16mm color-sound productions, *More Per Mile* and the *Lure of Fishing*, have been sent as far afield as California, New York, and Florida since 1956. Each year the films have been seen in schools, travel shows, and at various club meetings in not less than 27 different states, and in numerous cities and towns throughout Kentucky.

Two new pictures, *Vacation Wonderland*, which describes Kentucky's State Parks, and *The Sun Shines Bright*, which depicts the history and horses of the Bluegrass State, have also been released for distribution. These titles and the earlier title, *Lure of Fishing*, were all produced by Jack Lieb Productions.

The Kentucky films are offered as a public service facility designed to stimulate interest in the Commonwealth's tourist and travel potential. They are loaned free of charge to any group requesting them.

Films Give State "More for the Money"

Although the Division prepares and distributes brochures, booklets, press kits, news releases, and other forms of travel material, it has found that, in the long run, use of the screen medium is an excellent method of advertising the state, both economically and promotionally.

Division officials believe they receive *more for their money* with travel films like these.

There's boating pleasure for visitors on Kentucky Lake as this scene from "Vacational Wonderland" is proving to viewers of the Commonwealth's films.

And what Kentucky picture would be complete without views of one of the state's famed "bluegrass" horse farms? In "The Sun Shines Bright."

"Invitation to Kentucky" Tells Benefits to Industry

The Kentucky Division of Industrial Pro-ion recently produced a film which has red to be an excellent tool in advertising tucky's advantages as a location for new expanded manufacturing industries.

a current color film, *Invitation to Ken-y*, the viewer gets a compact, 27-minute s section of Kentucky's fast-growing in-rial development and the civic, social, ational and recreational advantages found e State.

Direct Showings to Industrial Prospects

ultiple prints of the film have been pre-d for showing at conferences with in-rial prospects, at meetings for develop-organizations and civic groups and ever interest in the subject warrants.

seeking the widest possible audience, the sion of Industrial Promotion has contract-vith a national film distributor for 200 anteed showings on television and at trade ndustry fairs around the country.

ilm Gives "High Return on Investment"

e film, first shown last year, has been received both in Kentucky and other s. Industrial promotion officials feel they etting a very high return on their invest-with this film. They say that in no other — at comparable cost — could Ken-'s advantages to industry be presented to ide an audience. Lieb Productions also uced Kentucky's industrial promotion pic-rounding out a well-planned visual cam-ig which is serving the Blue Grass State effectively.

Left: scene in "Invitation to Kentucky" shows Ford assembly plant at Louisville. **Below:** General Electric line at Owensboro.

"Land of Lincoln" Portrayed and

The Governor of Illinois Has a New Film Favorite

SPONSOR: American Oil Company.
TITLE: *Happy Holidays . . . in the Land of Lincoln*, 28 min., color, produced by Parthenon Pictures.

"THIS IS THE FINEST film made about Illinois," Governor Otto Kerner of that state said, following a Springfield preview of *Happy Holidays . . . in the Land of Lincoln*. Illinois' chief executive went on to write a pretty good review of the American Oil Company's latest addition to its free-loan film library:

"It shows the many opportunities in our own state for travel from the hilly areas in the northwest around Galena, to the many lakes and rivers for water sports and fishing, and the historical sites of Abraham Lincoln." And well he might appreciate this 28-minute color production from the cameras of Parthenon Pictures, for it fits like the veritable glove into the state tourism program the Governor has been stressing the past year.

Weekend Trips to Picturesque Places

Weekend trips for the entire family to such sites as the rugged and picturesque Apple River Canyon country, along the Mississippi bluffs to Palisades Park near Savannah and beyond to the Black Hawk Indian museum at Rock Island are tempting film fare.

But there's historical solemnity, too, as scenes pick up the life of Lincoln through glimpses of his home in Springfield and at New Salem where he grew into young manhood. Historic Nauvoo reminds viewers of its Mormon traditions and Indian graves at Dickson Mounds roll back centuries of time.

Something for Chicago's Mayor Daley, Too

Another pleased previewer of American's picture is Chicago's Mayor Richard Daley. And well he might be for widespread distribution of the film (via Modern Talking Picture Service exchanges) will include a good bit of "See Chicago, too!"

Brookfield Zoo with its performing dolphins, the city's famed art and natural history museums and the hurly-burly of a great metropolis add up to "let's go now" thinking among the many thousands of potential visitors who will see this picture.

Candid Glimpses of State's People

Happy Holidays . . . in the Land of Lincoln captures a lot of candid glimpses as it unwinds . . . of townspeople and tourists . . . parents and children. They're happy Americans, on holiday or at home in a film that's extremely pleasant on the eye and a real lure to the open roads that lead to this state's many tourist attractions.

Pictured right (top to bottom): scenes from "Happy Holidays" show Lincoln's New Salem; the Lincoln tomb on the outskirts of Springfield; a scene in Grant's home at Galena. The sternwheeler "Addie May" travels the Mississippi and a big freighter moves up the Chicago river. Oh yes, those aquatic acrobats are dolphins at Brookfield Zoo!

New England Bell's Distribution Methods Bring Company's Films to Wider Audience

In recent BUSINESS SCREEN articles on the use of public relations films in the Bell System we have seen that the film program has been active for more than 30 years, and that telephone films are now seen by about 127 million people annually in the United States and Canada. Over 250 films have been produced and distributed by the Bell System companies since the inception of the program.

The production of most Bell System films is handled by the American Telephone and Telegraph Company, in New York. However, the Associated Companies operate autonomously and make their *own* decisions on film matters. As each film is completed, each company decides whether or not it will participate in the production cost and thereby have the right to distribute the film in its territory.

Distribution's Higher Budget

Over the past 25 years, one of these companies, New England Telephone and Telegraph, has invested a total of over $750,000 in production and print costs for Bell System films. The New England Company's total cost for film distribution during this same period of time amounted to a little over $1,333,000.

In the New England area, the Company distributes Telephone films to theatres, television stations, clubs, organizations, churches, schools, or to any customers that request them. To reach the various types of audiences, over 40 film distribution agencies are used.

This wide decentralization of distribution is one of two unique practices which the New England Company carries out. The other concerns its disposition of "obsolete" films.

Deposit Prints in Libraries

It is perhaps accountable to the character and size of the area, and its excellent available public distribution facilities for film, that the Company has had considerable success in reaching audiences efficiently through free deposits of prints in public libraries.

In a survey of schools made several years ago the Company found many instances where Bell System films would have been used in classes if they had been quickly available, and had not had to have been booked weeks or months in advance. So, experimentally, blocks of prints were placed in the Boston Public Library.

It was found that these prints, offered only on a 24-hour, pick-up and bring back basis were being booked on an average of 80 times a year, which was about four times as many as centralized booking agencies, largely using mail delivery, had been able to achieve.

It was also evident that, despite the fact that the Library was handling the prints on a free basis as a public service, inspection was regularly carried out, and that print condition remained good.

School and College Outlets

This success led the Company to seek out other local public distribution agencies able and willing to provide prints for public use on an overnight pick-up basis.

In Massachusetts and Rhode Island, where great distances between towns and schools are not such a problem as in less thickly populated areas, it was found that several colleges and libraries were glad to stock prints and thus it was possible to cover most of the two states in this way.

Some of these locations are the Providence and Pawtucket School Systems, the Greenfield State Regional Library, Bridgewater State College, Fitchburg Public Library, Salem State College, and Libraries in Metropolitan Boston, such as Cambridge, Medford and Reading.

In all, 15 school systems, seven public libraries and eight colleges now maintain free deposits of New England Telephone Company films.

Plan to Use Other Locations

These free deposits are by no means the only distribution agencies in the Company's service area. Only selected "documentary" Telephone films are usually placed in these locations. But the success thus far indicates that many other locations will soon be set up in Maine, New Hampshire and Vermont, as well as in Massachusetts and Rhode Island. (Connecticut is served by another company — Southern New England Telephone Company.)

The Company has regularly used independent projection agencies, and most adult groups are served through these sources. In special television situations, Modern Talking Picture Service and Sterling Movies U.S.A. are often used. Association Films, as well, distributes some Telephone films in New England.

"Obsolete" Films in Service

Another unique practice of the New England Company is in its disposition of "obsolete" films. When two recent Telephone films, *Telephone Hour* and *Rehearsal* were declared obsolete and withdrawn from circulation nationally, the New England Company decided that regardless of whether they were obsolete technically or not, it was a shame to scrap such *musically* excellent subjects. Lowell State College, which specializes in training music teachers, was delighted to receive prints of these films, and now uses them regularly in the curriculum.

The Company also has found that obsolete old prints of *Hurricane's Challenge*, about the 1938 hurricane, have been useful to schools for teaching economics or natural history. Many of these prints have been permanently donated to various school systems.

Older Films Are Still Useful

While transistors are often replacing vacuum tubes in tele operations, such old films a *tle of Magic*, on the vacuum long withdrawn from gener culation, are still useful for lar curriculum use in many sc and the Company has pro them for this purpose.

Below: this handsome board stimulates interest in Bell films.

Inflight Motion Pictures, Inc. needed a reliable 16mm projector for TWA, that would run without any operator at all

h got it, using Kodak Pageant 16mm pro-or components.

he projector had to be so automatic and so o pletely reliable that, with the flick of a w h in a TWA SuperJet plane cockpit, the h would start, run uninterrupted for as long s ½ hours, and then stop.

You can imagine how utterly dependable that projector has to be.

TWA SuperJets have them, showing first-run movies in flight.

Using Kodak Pageant 16mm projector components, Inflight Motion Pictures, Inc., worked with Reevesound Company, Inc., to design this motion-picture system. Except for the "on-off" switch in the plane's cockpit, the equipment is hidden in the plane's ceiling.

The Kodak Pageant components used in this system are the same as those being used reliably in educational and business audio-visual training and sales programs everywhere. The reason is simple: *Kodak Pageant projectors work dependably whenever and wherever you want them to, with neither embarrassment to the operator nor distraction to his audience.*

If you need that kind of movie projector, ask your Kodak A-V dealer to demonstrate the new Kodak Pageant 16mm sound projector, AV-126-TR, shown on the left. Or write for specification Bulletin V3-65.

New Pictures for Management and the Public

New Data Processing Concepts Given Unique Film Treatment

☆ The difficult subject of data processing has been covered in a unique film treatment by the Lockheed-California Company, Burbank, California. Titled *The Data Seekers*, this 28-minute color (and part animated) picture introduces management to new concepts and potentials in the computer field. Although designed primarily for use at division and corporate level, the film is expected to see extensive use on other levels and outside of Lockheed.

Basis for filming *The Data Seekers* was the wide acceptance and demand for an earlier status report type picture on Lockheed's computer systems. The new film includes a quick review of existing equipment, techniques and future concepts, and then goes further into the philosophy of scientific business management.

Because of the technical and repetitive nature of the subject, fast pacing interesting transitions, and animation devices were used to keep audience interest. An intricate model of a future management control and display center, complete with stop motion equipment effects, highlight the film. The film has been appropriately sub-titled, "The Story of Management Control Through Data Processing."

The Data Seekers was produced within the Lockheed-California production facilities with the exception of certain animation sequences which were sub-contracted. Doug Muir served as director and Bill Moore was responsible for the cinematography treatment.

Slidefilm Gives 10 Steps to Increased Reading Capacity

☆ Designed to immediately help improve companies' communications, a new sound slidefilm, 10 *Steps to Increased Reading Capacity* provides the ten most effective techniques for improving a person's informational reading habits so he can read more easily and quickly, and retain more useful knowledge.

Finding that lack of reading capacity is one of industry's largest problems, research was conducted among 25,000 companies by the Industrial Education Institute and the results of the ten most practical and effective techniques were produced in the film.

The 20-minute slidefilm is produced in slidefilm technique to gain maximum instructional effectiveness. It is part of a series intended to provide industry with audio-visual aids on successful techniques for reducing costs, increasing productivity and improving quality of performance.

Prints are available at a prerelease price of $35 from Industrial Education Film Library, P.O. Box 564, Princeton, N.J.

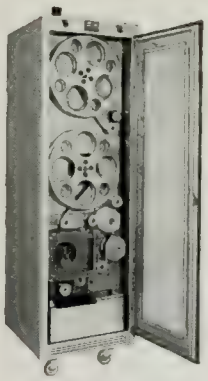
Strictly for Profit CHOOSE the
AURICON PRO-600 SPECIAL
16mm Sound-On-Film Camera

Records either Optical or Magnetic Sound-Track with Picture



If it's profit you're after in the production of 16mm Sound-On-Film Pictures, this all-transistorized filmagnetic Auricon Camera provides ideal working tools for shooting profitable Television Newsreels, film commercials, inserts, and local candid-camera programming. Now you can get Lip-Synchronized Optical or Magnetic Sound WITH your picture using Auricon 16mm Sound-On-Film Cameras. Precision designed and built to "take it." Strictly for Profit—*Choose Auricon!*

- Newly developed Auricon Self Blimped Super-Silent Synchronous Soundrive, designed to meet the most exacting sound recording requirements.
- Weighs only 24 lbs. which is 30% less than the popular Pro-600, for easy portability, yet retains all the superb sound-recording features of the heavier Auricon studio cameras.
- Models available for both Magnetic and Optical single system recording. Can also be used for double system recording.
- New "All Weather" Amplifier, Model MA-11, will perform perfectly under any climatic conditions—0° to 140° F.—at the freezing South Pole or the broiling Sahara Desert, without affecting its temperature compensated 14 transistor circuitry or frequency response of 50 to 12,000 cycles. Weighs only 5 lbs.
- Permanent internal rechargeable battery for complete portability, or A.C. operated when plugged into a 110-volt outlet.
- Film capacity is 400 feet, will also accommodate 100-foot and 200-foot daylight loading spools of 16mm film.

All Auricon Equipment is SOLD WITH A 30-DAY MONEY-BACK GUARANTEE and a 1-year Service Warranty. You must be satisfied!

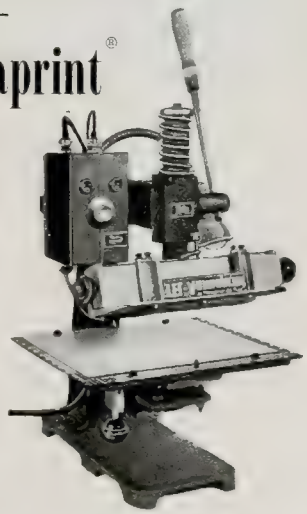
16/35mm Neg/Pos TEL-Amatic® FILM CLEANER

The Ultra Modern Way to Clean Films Safely!

S.O.S. TEL-Amatic 16/35mm Film Cleaning Machine does more work and better than machines twice the price! It has been thoroughly tested under the most exacting laboratory conditions with excellent results. Films with even the softest emulsions emerge scratch-free, crystal clean and clear—safely removes all dirt, grime and smudges from film. TEL-Amatic is a great modern scientific achievement. Foolproof safety factors protect precious negatives.



You cannot damage film with TEL-Amatic—requires no previous experience or skills. The operator simply throws the switch and TEL-Amatic does the rest. Over 1000 feet of film are cleaned every six minutes. One person can operate a battery of these machines—a tremendous labor saver.

Complete only **$3600** *Write for brochure*

- Jet-Spray Film Wash for 16mm and 35mm Film
- Curved Air-Blast Squeegees (pat. applied for)
- Special Non-Scratch Buffers
- Requires Only 15 feet of Leader
- Automatic Operation—Pushbutton Control
- Designed for Originals and Release Prints
- Continuous Air and Solution Filtering
- Electric Solution Level Indicator
- Complete operation VISIBLE at all times
- Variable Speed DC Drive from 110V AC
- Take-Up Torque Motor, Adjustable, Reversible
- 3000 feet Film Capacity, Reels or Cores
- Speed over 10,000 Feet per Hour
- Transmission, Silent Timing Belt

IMPROVE FILM TITLES with TEL-Animaprint®

Greatest dollar for dollar value in the industry!

The first sensibly priced HOT PRESS TITLE MACHINE for high quality, fast, dry lettering—the answer to economy and precision accuracy in film titling. The most intricate and tricky titles in any color or black-&-white are achieved with ease. Acme pegs assure perfect registration on paper or acetate cells. Prints dry from colored foil for instant use. Will produce titles in any language—main titles, subtitles, TV commercials, slide films, super-imposed subtitles, flip cards, trailers, crawls, shadow and third dimensional effects, etc. These may be applied to any kind of art, scenic or live action background, including photographs.

TEL-Animaprint Hot Press is specially designed to produce more attractive titles in less time and at FAR LESS COST. Ideal for Motion Picture Producers, TV Stations, Film Titling and Artwork, Special Effects Laboratories, Animators, Advertising Agencies, Art Studios, Commercial Photographers, Etc.

ALITALIA AIRLINES has released two travel motion pictures, *First Impressions*, an 11½-minute film photographed in various countries served by the airline, and *Variations on an Italian Theme*, a 28-minute picture that shows many of the scenic attractions of Italy not often visited by tourists, to clubs, churches and other adult organizations through Association Films, Inc.

In *First Impressions*, an airline pilot and stewardess describe some of the things they have seen in their air travels to Australia, Thailand, India, Iran and Greece and on return trips to their native Italy. Among the highlights of the film are a boxing match between two kangaroos who use their powerful hind legs when fists fail; a candlelit worship service in a Buddhist temple; views of superb mosaic-inlay minarets and shrines in Teheran; the Parthenon in Athens and the sun-drenched beaches along the Adriatic.

First Impressions was produced and directed by Mel London for Wilding, Inc.; written by Sheryl London; and photographed by Bernard Hirschenson.

Variations on an Italian Theme, produced by Carson Davidson, has won several international film awards and has received considerable acclaim from critics and audiences alike for its unusual treatment of a travel theme. It is not a travelog in the usual sense but a series of vignettes, each a cameo designed to convey an impression of charm, beauty and warmth of Italy and its people.

Bureau of Standards Releases Picture on Dental X-Ray Films

☆ A new instructional film for dental schools, clinics, societies and health service groups has been released by the National Bureau of Standards. *Dental Roentgenographic Film: Characteristics and Use in Radiation Hygiene*, is a 20 minute, 16mm color film co-sponsored by the National Bureau of Standards, the Council on Dental Research of the American Dental Association, and the American Standards Association.

The film compares slow, medium and fast roentgenographic film, pointing out that new high speed films cause less exposure of patient and dentist to radiation. It also shows ways to use roentgenographic film to decrease patient exposure and illustrates that fast films may be used to advantage, even with the older type equipment employing mechanical timers.

The film is available for loan from the Office of Technical Information, National Bureau of Standards, Washington, D.C., or from the American Dental Association, Chicago Illinois.

"Focus on Fitness" Stresses Need for Physical Development

☆ A basic and shocking shortcoming of contemporary American life — the fact that U.S. children lag far behind their European counterparts in tests of physical strength, agility and coordination is pointed up in a new film [illegible] duced by Eastman Kodak [illegible] pany.

Focus on Fitness stresses [illegible] *urgent* need for attention to p[illegible] cal fitness and physical educ[illegible] in general for American youth.

Produced in cooperation [illegible] the President's Council on P[illegible] cal Fitness, the film is nar[illegible] by Charles B. (Bud) Wilki[illegible] the President's special const[illegible] on Physical Fitness. It shows [illegible] physical fitness tests are con[illegible] ed, demonstrates remedial [illegible] cises, and discusses a sugg[illegible] program for long-term imp[illegible] ment of physical education i[illegible] nation's schools.

Additional emphasis is [illegible] the subject at the close of the [illegible] entation with remarks by Pres[illegible] John F. Kennedy. The Pres[illegible] refers to the old Greek conce[illegible] a "sound mind in a sound b[illegible] which he declares is a part [illegible] western heritage that canno[illegible] allowed to escape by default [illegible] modern America.

Coaches will find *Focus on F[illegible] ness* useful for presentation to [illegible] ents of high school children [illegible] should also be of interest to [illegible] ice and youth groups that [illegible] with children.

The 16mm color motion p[illegible] is available free, on a loan ba[illegible] all interested groups from A[illegible] Visual Services, Eastman K[illegible] Company, Rochester 4, New [illegible]

* * *

Optical Documentary Fil[illegible] Released by Bausch & Lo[illegible]

☆ A documentary of optical [illegible] ucts and scientific instrume[illegible] work, *For Eyes To See*, h[illegible] cently been released by Bau[illegible] Lomb, Inc.

The 16mm, 28-minute [illegible] film illustrates the contribu[illegible] Bausch & Lomb products p[illegible] providing health and well-[illegible] Basic optical principles a[illegible] viewed and typical manufac[illegible] operations shown.

Not intended as a *scientifi[illegible]* *For Eyes To See*, offers som[illegible] of interest for almost ever[illegible] dience. The film may be re[illegible] for group programs from th[illegible] Distribution Service, Baus[illegible] Lomb, Rochester, New York

* * *

Business Education Film [illegible]

☆ Business Education Film [illegible] issued a new catalog listing [illegible] than 350 rental motion p[illegible] and sound slidefilms in th[illegible] of business education. Free [illegible] may be obtained by writing [illegible] E. F., 5113 Sixteenth A[illegible] Brooklyn 4.

.D. USA" Is Released for ?blic Service TV Showings

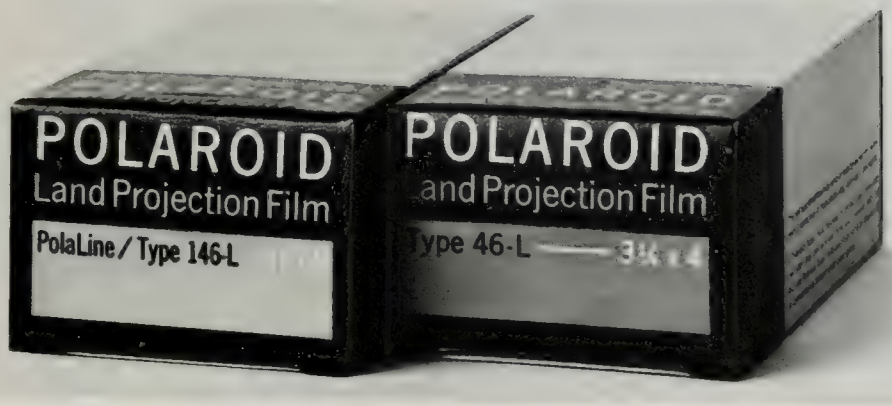
1. D. USA, an hour-long color lcumentary on the day-to-day ◌vities of five American doc- s in widely scattered sections of country, is now available to ions for public affairs telecast- The film, originally on the C-TV *March of Medicine* es, is being distributed by As- iation Telefilms, Inc. It was rduced by Smith, Kline & nch Laboratories in coopera- with the American Medical ociation, and directed by Hen- Rodakiewicz and James B. oon.

he first case study tells of Dr. id Dolese whose territory is ani in the vast Navajo country Arizona. His patients are the 00 Indians served by the Unit- Presbyterian Mission hospital.

Profile of Dr. Dorchester

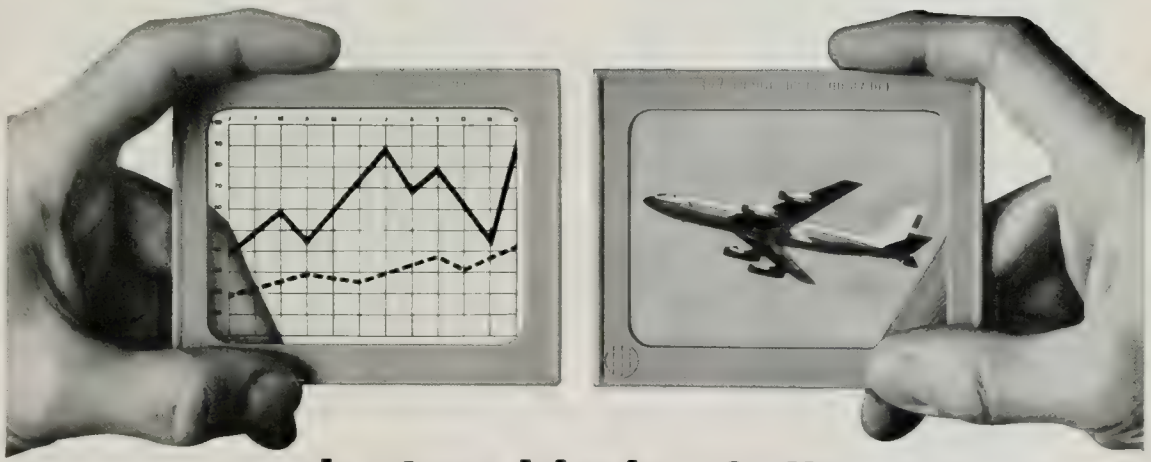
he second physician profiled r. Dan Dorchester of Sturgeon , Wisc., population 8,000, se patients are mainly of Swe- , German, Norwegian and Bel- origin. Every summer Dr. chester takes on a young medi- tudent, as the film shows, who ns about many illnesses during and long days.

r. George Wagnon, medical fficer in charge of the remote U.S. lic Health Service Hospital in el, Alaska, is shown giving medical advice by radio to ted villages whose trappers, ers and fishermen find regular impossible. Others make trips to Dr. Wagnon's hospi- ly snowmobile, dogsled and on



A visit with Dr. Moyer

r its fourth profile, *"M. D. S."* visits Dr. David Moyer, of dale, Pa., whose father and father were also physicians. s an active life: he's a doctor he high school, member of the hospital's speaking team, every day he must minister to ndless procession of patients n to his general practice.



e film concludes with a visit Dr. Julius Fernandez of St. 's parish, La., who serves his munity as doctor, mayor pro- nd hospital administrator. A ght of this sequence is the de- of a baby attended by Dr. randez.

"M. D. USA" is the third hour- color documentary from the ch of Medicine" to be re- for syndication. The pre- films, *"Monganga"* and *D. International"* have been sed a total of 397 times.

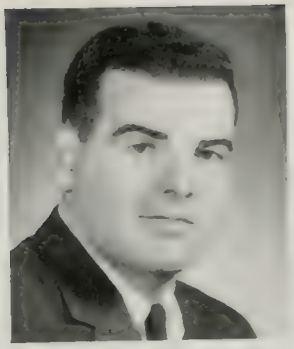
"POLAROID" AND "POLALINE"®

Two kinds of film

make two kinds of slides with a Polaroid Land Camera

Two special transparency films turn a Polaroid Land Camera into an easy, instant slide maker. And the cost is about ⅓ of the average conventional black and white slide.

For line copy work such as charts and printed material, Polaroid PolaLine Land film gives you a fully developed transparency in just ten seconds. It's a very high contrast material specifically designed to make slides from line originals. The blacks are really black, the clear areas really clear.



For continuous tone work, another Polaroid Land transparency film (Type 46-L) produces slides unsurpassed in sharpness, brilliance and full tonal range. It develops in 2 minutes.

You load and shoot the transparency films the same way as standard Polaroid Land film. Push a button, pull a tab, wait a moment and remove the transparency. After a quick hardening you put it in a snap-together frame and it's ready to project with a standard 3¼ x 4 lantern slide projector. You can use both films in any Land Camera that takes 40-series film except the J-66.

Doesn't this make other kinds of slide making kind of old-fashioned?

BUSINESS SCREEN EXECUTIVE

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

Sterling's W. J. Troy

Sterling Appoints W. J. Troy as Midwestern Sales Manager

☆ William J. Troy has been named Midwestern Sales Manager of Sterling Movies U.S.A., Inc. He will be based in Chicago where offices of the company are located at 100 West Monroe Street. bmera views screen as engineer adjusts analog panel with Electrocular.

etronic Headset Viewer Is
eloped by Hughes Aircraft

featherweight electronic-optiiewing device, worn comforon the head, and providing iewer with a picture appearp to eight feet in diameter, been developed by Hughes raft Company, Fullerton, Calira.

Te device, called Electrocular, sables a small L-shaped flashh with a monocle at one end.

erweight Electrocular headset latest in AV communication.

nonocle is a transparent mirpositioned 1½" in front of eye by a tubular L-shaped ng. The housing contains a ture cathode ray tube in the gleg of the "L" and mirror the short leg to reflect the image onto the viewing eye-

cording to Hughes vice-presi-dent, C. Harper Brubaker, "Electrocular is designed for a multitude of situations, both military and civilian, that require a principal decision maker to divide his attention among a number of tasks. The device can furnish him with complex visual information from a number of sources simultaneously meanwhile permitting him to move about freely in performing other necessary work.

Applications of the device in industry are seen in such situations where production workers must assemble or adjust large equipment by consulting instruments beyond their area of vision. In such a case, the job may be handled by one man wearing an Electrocular device, thus freeing skilled personnel for other work. Also, assembly workers equipped with the device can receive visual instructions on how to wire and install complex components, eliminating blueprints and printed instructions. The device will also be applicable in the fields of space exploration, military, medicine and aviation.

The image provided to the Electrocular observer is superimposed on whatever background is in his immediate line of sight. The eyepiece selectively filters the background illumination by means of dichroic filters giving a sharp picture, and allows changing the size of the picture from one to eight feet in diameter. The headset is designed to support both an earphone and microphone and the unit may be installed on either side of the headset according to individual preference.

New AUDIO-VISUAL Equipment

Recent Product Developments for Projection and Production

Film Makers' Compact Slate Designed as All-One Unit

☆ A new compact slate for film makers, called the CECO "quick-slate" was announced recently by Frank C. Zucker, president of Camera Equipment Co., Inc.

Using white lucite as the writing surface, this new compact slate is an "all in one" unit. A black grease pencil is attached to the slate with a pull-out chain with automatic return.

A clip on the back holds the pencil when not in use. An eraser is also clipped on the back for quick use. To prevent the stick from flopping open during use, magnets have been inserted in each of the sticks to keep them in a closed position.

The back of the slate also features a clip board for holding instructions and notes. This quick-slate measures 9½" by 11". Price is $24.95 list. For additional data, use Request Form NP-=1.

* * *

New Da-Lite Projection Screen Rolls Up into Small Package

☆ A new portable projection screen easily adaptable as an aid to sales presentation has been introduced by the Da-Lite Screen Co., Inc.

Featuring Da-Lite silver lenticular screen surface, the new screen gives excellent results in reproduction of slides, film strips and movies even in offices with unfavorable lighting conditions.

The screen provides a 22" by 22" viewing surface for office or conference room presentations, yet rolls up to a small package about 1" by 2" by 22" for easy carrying. The screen also is ideal for previewing and editing movies and slides. For additional data, use Request Form NP-=2.

* * *

Buhl Has New Wide-Angle Lens

☆ The new Buhl Optical Co. wide angle lenses when used with the Bell & Howell Tandematic improves projection in small rooms. Ideal for rear screen projection, Buhl wide angle lenses will reduce projection distances by more than 45 percent, Buhl announces.

The company reports that big screen pictures retain all the fine features built into the Tandematic. Price of two matched lenses with adapter rings is $99.50. For additional data, use Request Form NP-=3.

Speedry Applicator Developed For Visual Aid Projection

☆ A new felt-nib color applicator developed especially for use on films, transparencies and acetate overlays in visual aid projectors has been introduced by Speedry Chemical Products.

Called Speedry "Pro-Jek" applicator, this new applicator enables the user to draw, mark or highlight directly on projection sheets, slides, plastic map and chart shields. It uses a completely new ink formula. Markers are available in four transparent color inks, red, blue, green and black. The new Speedry "Pro-Jek" applicators sell for 99 cents each. For additional data, use Request Form NP-=4.

* * *

Allied Unveils New Soligor High Transmisison Lenses

☆ A new line of high transmission Soligor C-mount lenses for 16mm movie cameras and 1-inch Vidicon TV cameras has been announced by Allied Impex Corp.

Embodying the latest in lens engineering, these lenses are ideal for photographing sports events and for closed circuit television, Allied announced.

The new Soligor lenses include a 12 1/2mm fl.4 lens retailing at $129.50; 15.8mm fl.4 at $149.50; 25mm fl.4 at $79.50; 50mm fl.4 at $99.50; 75mm fl.4 at $119.50 and a 150mm fl4.5 at $99.50. For additional data, use Request Form NP-=5.

Battery or AC Current Powers New McClure Slide Projector

☆ A new inexpensive, battery-powered slide projector which can also be powered by conventional 110 v. AC current was announced recently by McClure Projectors, Inc.

The projector comes with an Airequipt slide changer that accomodates 36 standard slides in a single loading. It has the advantage of providing instantaneous projection without the need to hunt for an AC outlet.

Constructed of aluminum, the projector is combined with rechargeable battery and charger. Total weight is 8 pounds. It utilizes rear-screen viewing principle, but can also be used for wall projection. For additional data and sources, Request Form NP-=6.

LAKE CENTRAL AIRLINES

Visual Exhibit Techniques at the Seattle World's Fair:

(CONTINUED FROM PREVIOUS PAGE THIRTY-SIX)

is occupied by a Science Theater, set up adjacent to Area II. This will be an auditorium for the presentation of special demonstrations as materials become available. The theater is equipped for both 16mm and 35mm motion picture showings. Staff members of USSE have been scouring the country to find suitable film subjects which will supplement the fare served in regular exhibit areas. Programs for these special film offerings will be published and posted periodically. It is hoped by USSE officials that these films will serve as temptations to bring some of the really interested visitors back for a second, or third, look.

Films in the "World of Century 21"

Another of the "Worlds" of the Seattle Fair which is now featuring films prominently is the new "World of Century 21." This section is housed in the Coliseum, a modernistic structure which boasts four acres of open, pillar-free space under one roof.

A series of exhibits planned for the Coliseum will depict the potential for the working and living environments after the year 2,000. Underlying these presentations will be the question of whether the world wants this glowing, modernistic future or the havoc of "the bomb." In its presentations, the alternative of life in the future, the walk-through show in the Coliseum is making prominent use of motion pictures.

An 800-Seat Theater for Exhibitors

An automatically — important role has also been assigned to movies in the "World of Entertainment." One of the facilities in the Performing Arts section of the Fair grounds is now in continuous use for special motion picture presentations. This is the 800-seat Little Theater, equipped to handle both 16mm and 35mm exhibitions.

One of the primary uses of the Little Theater will be to present motion pictures which tie in with commemorative events during the Fair. Each of the 35 participating nations will be honored with days set aside for special observances and programs honoring its people and its traditions. At these times, selected motion pictures will be presented as keynotes in the programs. These movies will cover the full gamut from educational films, to institutional and industrial presentations, winding up with the best entertainment motion pictures available in the country.

Daily Showings of Factual Pictures

Typically, there will be shows during the day depicting the life and development of the country. Then, in the evening, there will be a theatrical film. In the use of the Little Theater, Fair officials are counting heavily on the flexibility of the film medium to provide important entertainment on short notice. They reason that it is easier to adjust times of film showings than to build firm schedules for visiting dignitaries who will spark special events at the Fair. So, libraries of top film product are being accumulated for presentation in schedules which will be adjusted on a c day basis.

Among the commercial exhibitors World's Fair, the use of motion pictures a big potential psychological advantage: wandering around the 74 acre Fair site while, a good portion of the visitors v inclined to favor exhibits where they chance to sit down. Movies offer onc way of capitalizing on this potential.

Of much more importance has been th ity of motion pictures to tell the story significance of two vital consumer-o industries. The industries: food and products. The exhibitors: Nalley's, T Tacoma, Wash., a major food packe distributor in the Northwest, and the

Forest Products Shows Rarig's Picture

The Forest Products Industry show is using the element of fantasy to drive home its theme — the importance of wood and wood products in our everyday life. The reasoning behind this film, developed for the Forest Products Industry by Rarig's, Inc., Seattle, is that most people tend to take the wood products they use in everyday life for granted. The film, therefore, moves to illustrate the importance of wood by depicting a hypothetical living situation in which there is no wood. In keeping with the Century 21 theme of the Fair itself, the action takes place on a distant planet.

In a laboratory on a planet which has existed without wood, scientists are trying to create a mysterious new material which will be apparent to Earth audiences as possessing some of the best properties of wood. Background light and sound devices indicate a space ship landing outside the laboratory.

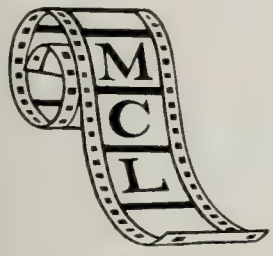
Miracles of Wood We Take for Granted

A pulchritudinous Earth lady soon enters, clad in a futuristic-but-form-fitting rayon outfit. Being scientists, the planet people show particular interest in things like the rayon fabric, the wood frame for the attache case the lady carries, the facial tissue used in applying makeup, and so on.

Through a series of dissolves, the Earth lady describes the everyday uses of wood products on her planet. The listeners are astounded. Then, in a friendly farewell scene, the Earth lady leaves samples of paper and other wood products with which the interplanetary neighbors can start their own wood technology.

Produced in 16mm Wide-Screen Color

For maximum dimension and impact in the Forest Products Industry's 115-seat theater and within available budgets, Rarig has produced this film in 16mm CinemaScope. This is probably one of the few times an anamorphic production has been undertaken in 16mm color. Release prints were made from Eastman Color Internegative materials. Later, the film will be optically printed in a standard aspect ratio for regular 16mm presentation by individual member companies of the Forest Products Industry.



In their total effect, the exhibitions which will be featured at the Seattle World's Fair probably represent a high point in creative, non-entertainment applications of motion picture techniques. In this respect alone, the World's Fair will make a major contribution to progress in the non-theatrical film field.

Where to Buy Production Review Copies

☆ Copies of the 12th Annual Production Review are currently available (at $2.00 each) at the following nationwide outlets:

In New York: Florman & Babb, Inc., 68 W. 45th St.; The Camera Mart, Inc., 1845 Broadway (at 60th); and the Magazine Center of New York, 253 Seventh Avenue.

In Chicago: at Post Office News, 72 W. Monroe. In Los Angeles: from H. L. Mitchell, 1450 Lorain Road, San Marino. San Francisco: Jim Stevenson at 420 Market Street.

AFTER A BULK PLANT FIRE...

how do you pick up the pieces?

It happened. Kansas City, Kansas, 1959. TV news coverage resulted in a somber, spectacular record of a rare occurrence.

It happened. So *you analyze* circumstances preceding it. *You learn.* And then *you teach,* with a motion picture which uses the TV footage for emphasis and explanation — recommending methods of fire prevention and control.

You help it not to happen again! "Analysis of a Bulk Plant Fire," was sponsored by American Petroleum Institute for the benefit of the entire oil industry.

How Government Can Help Export Your Fi

If It Meets "Educational" Criteria, U.S. Certification Can Ease Film Proble

ONE OF THE BEST WAYS to export an idea is to wrap it up in a film.

Today when many of the doors of foreign policy seem to turn on the pivot of international trade, it may be useful again to examine how instructional and informational films from business and industry may be helped to go abroad.

When films produced by business and industrial sponsors meet certain criteria, they are eligible to go to many countries without payment of customs duties, without import licenses, and with relative freedom from other kinds of paperwork and costly fees.

"Wouldn't it be simpler just to hurl it across, like a discus?" one understandably harassed businessman inquired, looking with some dismay at a 16mm film can and the papers usually needed to get it abroad.

Canada Requires a Single Certification

Much, but not all, of the paperwork has been eliminated. For some countries, Canada among them, it is necessary to establish only once the educational character of a film — or for that matter a kinescope, sound recording, filmstrip, set of slides, wall map, chart, or model — to insure that all subsequent shipments of the same title will move across the international boundary with relative ease. A file number assigned to the item is its passport, regardless of its consignee or port of entry.

The arrangement does not apply for all countries. For more than a quarter of a century various plans have been formulated to move visual and auditory materials across national boundaries. The one which has proved the most generally practicable is a system by which the Government of the exporting country certifies that the material meets internationally accepted criteria to be classed as educational, and, subject to review by the importing Government, the certificate is recognized and the shipment and all subsequent shipments of the same titles are automatically accepted for duty-free and other special treatment.

During its operation of such a certification program for materials originating in the United States, the Attestation and Review Staff of the U. S. Information Agency (before 1953, of the Department of State) has issued more than 18,000 certificates, covering more than 100,000 titles in all classes of audio-visual material.* It is estimated that some $2.5 to $3 million worth of non-theatrical are helped to go abroad each year und program. Some thirty-five governments nize the Agency's certificates or "find helpful" in making their own determi of the eligibility of certified materials.

Most of the films of business and in which are intended to inform the public personnel, present the results of scienti search, or for instructional use are eligit certification. Material which contains for superiority or exclusivity, or whic the primary purpose of direct advertis a product is not eligible.

Congress Considers an International Co

Internationally accepted criteria are se in the Agreement for Facilitating the I tional Circulation of Visual and Auditor terials of an Educational, Scientific an tural Character. In 1960 the Senate advice and consent to its ratification, a abling legislation was introduced to the gress in the current year.

United States participation in the Agre would help Americans to import instru films from abroad, and would increa number of countries which now rec United States certificates. Under the of the Agreement an international list all certified materials would be made av to all participating countries, to make i cation of eligible materials easier.

Some additional ways in which busine industry films may be helped to go through assistance from United States G ment agencies are the following:

The Library of Congress Cooperative Cataloging Program

The Library of Congress has an ex program for cataloging motion pictur filmstrips, which results in the distribu descriptive catalog cards to subscrib home and abroad interested in films.

It should be noted that registering for copyright does not automatically

* Applicants must be American owners of basic rights to the materials. Certificates have been issued to more than 2,700 such applicants. Information may be obtained from the Attestation and Review Staff, U. S. Information Agency, 1750 New York Avenue, Washington 25, D. C.

About the Author:

In addition to his duties in the U.S. Information Agency, Mr. Pearson is Chairman of Interdepartmental Committee on Visual & Auditory Materials for Distribution Abroad

year after year, MPO consistently receives more awards and citations than any other film producer. 8mm Sound Film: New Tool for World Tra

U.S. Commercial Attaches Abroad Would Show Product Films to Potential B

LET A FILM TELL your company's product story abroad. A new motion picture tool has become available during the past year which can materially assist United States manufacturers' export expansion. This is the low-cost 8mm magnetic striped motion picture film and the newly developed 8mm sound motion picture projector.

This new development makes it simpler to show, in full color, American products, services, and know-how to prospective overseas agents, in their native languages, at a fraction of the cost of film heretofore used to stimulate American exports.

Many Industries Have Used the Medium

Businessmen are aware that the motion picture is a powerful selling, advertising, and public relations medium. Office equipment, machine tool, petroleum, pharmaceutical, and material handling firms have long made effective use of films to stimulate their export trade.

Businessmen are now expected to redouble their use of the medium, with substantial savings in cost of 8mm sound film and projectors, capable of rendering 16mm quality at half the size and weight of 16mm. Cost of prints, at the outset, will be at a saving of about one-half the price of their 16mm equivalents and, as developments come about, these costs, too, will come down.

American firms desiring to utilize the above medium to expand their foreign trade, by seeking agents for their products in markets where they do not have an outlet, would make available to the Business and Defense Services Administration an 8mm sound print of their product. This film should be delivered to Washington in the language of the country or countries in which the firms desire to expand their foreign trade, at their complete expense.

8mm Projectors at 50 Strategic Spots

It is visualized that this U.S. Government Export Expansion Program might be activated by providing about 50 selected Embassies and Consulates with 8mm sound projectors, small screens, and film storage cabinets.

It is felt that many American firms, anxious to expand their foreign sales — especially those products which would be cumbersome to be carried by a salesman or not too descriptive with literature — will be in a position to provide copies of 8mm sound and color films for use by our Commercial Attaches, on Embassy projectors.

These films would provide our commercial people at the Embassies and Consulates with a comprehensive, technically accurate e ence collection of films, for use in con local overseas importers and businessm stimulating their interest in United State ducts. Later on, after an agency has established, U.S. consumer-type films wi up U.S. products with needed custom doctrination for the product.

Attaches to Contact Import Prospect

Films would first be screened in Washi prior to being sent to a given country, certain if the film met pre-established c If it were acceptable, it would be sent a and, upon receipt of the film, the Comm Attache's office would determine, from mation at hand, who in his area might most competent to import such a produ

If the potential agent were in close mity to the Embassy or Consulate, the could be invited to visit the office to the potential agency representation. prospective agent were located some d away from the Commercial Attache, person could be notified that someone the Embassy would be calling upon hi visually show him a new American pro interest him in becoming the importer product. It is quite likely that the Emba ficer may be able to see half a dozen o potentials, for different products, on planned field trip.

Bringing Buyer and Seller Together

Should interest be evidenced by t porter, the Commercial Attache woul report to Washington, submitting the na address of the potential agent, his credit banking affiliations, and any other usef mercial data necessary for an America to evaluate the desired representation. On this is done, we, as Government, step ou the picture, and negotiations take pl tween the interested firms. We have a our purpose to bring seller and buyer to

We do, however, maintain a continu terest until an agency is firmly establis negotiations break off. If the firms a get together, then the Commercial A office attempts to find another import when this is done, the routine is repeate

With this program in mind, our fi was to find out to what extent busines be interested in joining the BDSA in ta taking such a program. We set out to t this interest by using a mailing list of a mately 1,000 known American firms were known to have made a sound fil

THE EDITORIAL VIEWPOINT

Films' Important Role in World Trade Reflected in Current Editorial Features

WORLD TRADE is a *two-way* street. As the United States reaches the hour of decision on liberalized trade legislation, the Common Market countries move aggressively forward. At this decisive period in world trade affairs, we bring our readers background on several international film programs which conclusively point to the film medium as the one "universal language" which can prove a decisive means of communication among all nations.

The films of the California Texas Oil Corporation (see pages 35-36); the continuing film success of Volkswagen of America; IBM's visualization of World Trade; Remington Rand's recent marketing film success abroad are prefaced by valuable background ideas from the U.S. Department of State's Bill Pearson (page six) and the Department of Commerce's Nate Golden (page ten). Recognizing the importance of this subject to the free world's economies, we plan to continue features like these throughout the months ahead.

* * *

Midwest Studio Managements Can Uphold Standards and Status of Screen Directors

☆ The truly-qualified, *experienced* screen director has long been recognized (though sometimes too little appreciated) as *a key member of the management team* in the studio where he is permanently employed. But the current efforts of a Screen Directors International Guild representative (out of its New York headquarters office) to "help" Chicago members of that group negotiate an "industry-wide" agreement between midwest studios and the Guild has raised some important questions.

The Directors' contract now in effect among New York studios has recently been challenged on some basic working provisions. Has it also increased the *permanent* employment of directors? Has it encouraged a further trend toward the *free-lance* director? Why do the screen directors in Los Angeles, a group with exceptionally high standards and pay scales to match, remain aloof from the SDIG?

In some useful ways, the Guild has lived up to the *ideal of a true guild* of craftsmen but its membership standards, insofar as Chicago is concerned, would seem to equalize the status of inexperienced members with those of really qualified men. The president of the Chicago chapter, for example, is an outstanding cameraman — but is *he* a director?

Has the Guild ambitions toward a kind of "mass union" with equal status for all of its skilled and less-skilled members? If not, then let it define the *qualifications* of a screen director and drop the unqualified from its rolls!

As supervisory employees, screen directors have *primary* management responsibilities dio managements and their directors dispose of a few obvious "abuses" w sacrificing the vital liaison and permanen ployment status which is so desirable real craftsman and to his company. C has a great opportunity for real leadersl meeting its good men on equal footing, out proposals of mutual advantage and these into immediate effect.

Or will there soon be more *perma employed business agents* serving the m of splinter unions in New York, Chicag Angeles, etc., than there are animators. eramen, electricians, or screen directors larly employed in the nation's organize studios? Let's think it over!

* * *

New York's School Children Learn Ab City Sanitation Via Award-Winning Pic

☆ School children in New York are ing how the big city keeps its streets through a new prize-winning film (Am Film Festival Blue Ribbon winner) — *Litter, Will Travel,* sponsored by the Department of Sanitation and produc Dynamic Films, New York.

The 13-minute color film, written b starring comedian Roger Price, is widel by Sanitation Department and Citizens'

N. Y. Sanitation Commissioner Frank J. Lu right) shares Blue Ribbon award for "Have Will Travel" with comedian Roger Price.

mittee "clean city" missionaries who vis lic and parochial schools and civic grou

As part of the continuing education gram, Sanitation Department speakers w ploy *Have Litter, Will Travel* in schoo elsewhere in the same fashion as th other films which depict Sanitation ment activities and practical litter- measures.

In these programs, young New York movies, hear "clean-city" talks, particip question and answer sessions, and are instructional literature to take home.

"We believe that this picture will h to accomplish two important civic obje Sanitation Commissioner Frank J. Luc said. "It will educate young citizens ways of municipal cleanliness, and at th time, get these "clean city" missiona carry the message home to discuss wit parents."

Busch Sues Former Employee, Charges Use of Trade Secrets on Competitive Equipment

☆ The rights of an employer and proprietor to protect his trade secrets and proprietory rights against their invasion by a former employee were defended in Saginaw, Michigan courts during May when Edwin Busch, head of Busch Film & Equipment Co. of that city brought suit against a former salesman, Elmer Lange, also of Saginaw, charging that Lange used trade secrets to build and offer for sale projection equipment similar to that manufactured and sold by Busch.

Circuit Judge Fred J. Borchard took action on the suit on May 11, issuing a temporary injunction against the former employee to prohibit him from representing himself as still affiliated with the firm. Busch asked injunctions and $25,000 in damages in his suit. He charged that Lange had access to company records, parts and trade secrets and that he built the machine while working for the firm.

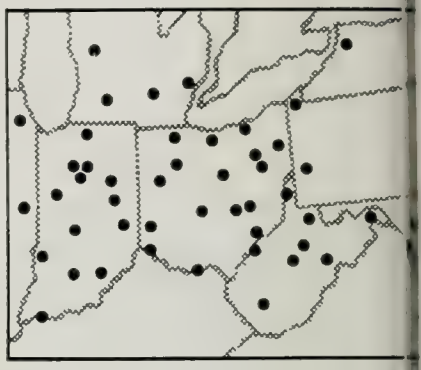
Pharmaceutical Manufacturers Film Kit Offers A-V Help to Prescription Druggists

☆ Kudos to the Pharmaceutical Manufacturers Association, Washington, D. C. and to LIFE Magazine for an excellent kit entitled "Pharmacy's Motion Pictures and How to Use Them" which is currently going to the nation's prescription pharmacists.

BUSINESS SCREEN cooperated with Hill & Knowlton, Inc. (who created the kit for the Association), furnishing instructional material for the package. A 54-page catalog of the "Prescription Drug Industry's Motion Pictures" is included, together with individual pieces on "How to Book a Film Showing," "Answering Audience Questions," and "How to Operate a Sound Projector."



The film catalog is especially interesting. It is divided into sections, listing films relevant to "The Anatomy of the U. S. Drug Industry," "Films About Medical and Allied Professions," "Agriculture," "Understanding and Helping Older People," and "The Medical Team and the Treatment of Specific Conditions."

Screen Directors Host at Evening of Fil

Five Pictures Shown at Donnell Library Center in N.Y.

An evening program of five films was presented by the Screen Directors International Guild and the New York Public Library at the Donnell Library Center, New York, May 23.

Featured were *Jazz After Hours*, directed by Shepard Traube, a TV pilot program; *A Publisher Is Known by the Company He Keeps*, directed by Jules Schwerin and produced by Louis De Rochemont Associates for Alfred A. Knopf, Publisher; *Litho*, directed by Cliff Roberts, produced by Robert Yung of Elektra Studios for Amalgamated Lithographers of America; *Dialogue With Life*, directed by Lloyd Ritter and Murray Lerner, produced by MPO Productions for the Health Insurance Institute; and *West Point*, directed by Daniel Klugherz and produced by and for the U.S. Army Pictorial Service.

Theater Filled to Capacity

New York needs more of this kind of showcase for specialized films. The Donnell Center has an excellent auditorium, and the house was filled to capacity on this occasion.

It might be suggested that future programs could be more diversified. Four of the films shown were in black-and-white to one in color, while a reverse proportion would probably be more typical of Guild members' output of 20 to 30 minute films. Also, the four b/w films seen tended to be low-key throughout. While this, no doubt, was an effective technique for the subjects at hand, a more balanced choice of films would make for a more sprightly evening.

Among Year's Best Pictures

Litho and *Dialogue with Life* have been reviewed in past issues. Both are among the best of the 1962 crop of films. *Litho* received the most vociferous and spontaneous applause of the evening. New and interesting was the De R mont film for Knopf. Mr. K a home movie fan for 30 or years, commissioned this m picture to be made from a 6000 feet of his badly-worn, h shrunk film which was mould in his closet. Not only was the stock, itself, in poor shape, but Knopf could never be called a passable photographer. Yet- picture comes off beautifully.

Seen in typical home-m style are such great literary n as Thomas Mann, Warwick D ing, Max Beerbohm, Willa C and others. Mr. Knopf is or the last of the great individu — and he knows it. Despite difficulties of working with man — perhaps even becau them—director Schwerin has a very fine job in preparing material, intercut with ultra c ups of Knopf and made a first film.

West Point, Dan Klugherz's ture for the U.S. Army Pict Service, uses an unobtrusive perceptive camera techniqu show the moral and intelle aims and accomplishments o Academy through the live ac and words of typical cadets.

Jazz After Hours was not the high standards of the four films on the program. hard to put down such a gia Coleman Hawkins but this fil most manages to do just that. Eldridge, Johnny Guarnieri Cozy Cole are also seen and h

Acorn Films Relocates Due Building of Boston Toll R

☆ Progress in the form of a toll road into Boston has c the relocation of Acorn Film New England. Formerly locat 465 Stuart Street, Boston, A Films is now located at 88 E Street, Boston, Mass., adjace the Prudential Center. The p number remains the same.

CAN YOU USE THIS RECORD-MAKING IDEA?

You can use an LP record to deliver that special sales or product story to dealers, distributors or other trade outlets, — or to important prospects or customers. You can be sure of getting your story across. The people who get an LP record from you are bound to listen to it. If you like, we can put your message on one side and captivating music of your selection on the other.

We make custom records from your tapes — for sales promotion, training, slide films — any use. Starting from your tapes we do the mastering, plating and pressing all in our own factory, can guarantee highest quality and offer lowest prices plus fast service. Small orders and re-orders filled economically, thereby reducing inventory need and eliminating over-ordering. Check our low prices. SEND FOR FREE MANUAL OF RECORDING & CUSTOM PRESSING.

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

IN THE FUTURE, a brand new agency will be handling film activities in the Office of International Trade Fairs. Reg Keniston will be in charge of the Graphics Division, Office of Information, Bureau of International Business Operations, Department of Commerce, Washington 25, D. C.

* * *

Pilgrim Readies New 3-Story Plant for Expanding Operation

. . . A three-story building, with complete screening facilities, is being handsomely redecorated for Pilgrim Film Service's expanding operations in northwest Washington.

According to Bob Pilgrim, an increasing number of out-of-town clients, plus government and association business and the NBC-TV *Brinkley Journal* titles, made the move to new quarters essential. Four animation stands and new optical equipment for both 16 and 35mm operation are being installed at the new Georgetown-type plant at 1252 20th St., N. W.

* * *

Office of Civil Defense Puts New Vigor in Audio-Visuals

. . . As a followup to last month's blast for new civil defense films, we're glad to announce that a vigorous audio-visual program has been launched in the Office of Civil Defense, now within the Department of Defense.

Harald Kirn, Director of Audio-Visual Planning in OCD's Public Affairs Office, says that *Protection Factor* 100, a report on the nation's shelter survey, is now in distribution to TV stations. Eventually, 1,100 prints will be circulated through Army Film Exchanges. The film was produced by the Audio-Visual Office at Norwood Studios, Inc.

In addition, Wilding, Inc. is producing a new public information film which will show what happens when a small town faces the issue of school shelters. This 27½-minute picture is being shot in White Plains, N. Y. Wilding is also producing an OCD package of clever one-minute animated TV spots.

Ten half-hour training films on home care of the sick and injured will be produced jointly with the OCD and the American National Red Cross. These films are intended for school showings, at training classes, for television release and for Red Cross certification.

Motion Pictures, Slidefilms Aid Peace Corps' Recruitment

. . . Although still a baby, though a growing one, among government agencies, the Peace Corps has started rolling on audio-visuals as a means of recruiting more young people for the international project. At the Seattle World's Fair, for example, a new five-minute 16mm color film has been set up on a continuous projector in the Peace Corps' Pavilion to supplement dramatic action stills. The film was made from USIA newsreel footage shot in four countries for overseas use.

With other existing footage, a 27-minute general information, recruiting film has been prepared for public viewing in July. Dave Garroway has contributed his services as narrator and the documentary will feature interview sequences with Sargent Shriver.

A 12-minute slidefilm series for recruiting "in the field" is already available for use by civic speakers, schools, etc. And in the near future, filmstrips aimed at specific audiences (e.g. agriculture, nursing, etc.) will be completed.

Three Pictures "In Production" for Air Force-Sponsor Program

. . . Three new industry-sponsored films are in production for the U. S. Air Force Sponsored Film Program. Pratt-Whitney Aircraft Corporation has awarded National Film Studios a contract for a 27-minute color film which will develop the tactical warfare concept from World War II until the present. Working title on this production is *F 105D*.

United (Insurance) of Omaha and the Air Force Association will sponsor *The Greatest Gift*. RCA will start lensing *Sentinel for Survival*, dealing with the nation's Ballistic Early Warning System (BMEWS).

* * *

"The Eagle's Talon" Receives Citation from Headliner's Club

. . . *The Eagle's Talon*, Secretary of Defense McNamara's strong film report on the state of the nation's defenses (reviewed in a recent issue) has received a Special Citation from the National Headliner's Club in Atlantic City, N. J. It reads: "To the U. S. Dept. of Defense, Office of Public Affairs, Audio-Visual Division, for the film *The Eagle's Talon*, which graphically fulfills the public's need to know on Defense matters as well as alerting to Communist agression."

Col. Bertram Kalisch, Executive Producer, accepted the award for the Department.

* * *

Critics Applaud Jazz Album as Norwood Debuts in Music Field

. . . To the surprise of a few, Norwood Studios, Inc., producers and new distributors of government

Norwood's music man, Ray Han

films, has branched out even ther to include a new music cor ation. And for their latest re album, "Jazz Toccata and Fug a buffet luncheon and "review session was held in Norwo Washington studios.

Music critics, TV and r personalities and members of press were on hand to app composer Ray Haney, music rector at Norwood, and the fo soulful, soft-spoken "Tall Te of TV fame. Haney has also c posed, scored and directed background music for Norwo 52 AFL-CIO *Americans at W* films, as well as a sweet new record titled, "Rockin' and Dr in' Music."

Marian McPartland to Serve as W.V.P.'s Director of Music

. . . Internationally-known composer and jazz pianist Marian McPartland, who wrote the original score for WVP's charming *Mark*, will serve as music director and consultant to Washington Video Productions, Inc., according to word from president George F. Johnston. *Mark*, incidentally, is going abroad as one of America's honored CINE selections this year.

AA's Award-Winning "Flight" Gives Public Facts on Safety

E'RE BENEATH THE smooth belly of the jet airliner when uge wheels start to roll. The w-striped runway slips be- h us, faster, faster, and sud- y we're airborne. The wheels w up in the belly. And we're *Flight* — which is the title he new, award-winning, pub- affairs film sponsored by the ral Aviation Agency.

ith probably the most com- mission in the history of sportation, the FAA has a big, ieldy story to tell the pub- 28½ minutes is hardly time gh, and yet this film drives e its message: namely, "safe al is routine."

A Little Girl's Viewpoint

he viewer of *Flight* is drawn the story by the chubby, com- nt hand of one of the most itching little six year old girls it the screen in years. She's g across the U. S. in a trans- inental jet — and right from start we *care* that her life is he hands of hundreds of peo- whom she'll never know. We t, for instance, the pilot and f his crew, the FAA controller, a flight inspector, the lineman on a radar tower, and dozens of others of the thousands of employees who make flying safe and swift; we are shown, in some detail, how these men are trained and their machines are tested. Gradually, it dawns on us that the picture is drawing together the many pieces of a new era in history.

Produced by Vision Associates

Vision Associates, Inc. produced the film — and some exceptionally outstanding Ektachrome interior, exterior, day and night shots. Tension is sustained nicely throughout the film with solid musical editing. Lee Bobker wrote and directed, and it was photographed by Ray Long.

In the final analysis, this motion picture presents a brisk, positive picture of a well-knit government agency which, paradoxically, employs thousands of workers in "unrelated" jobs, divides them into many services, and spreads them all over the map. This film portrays their interest in their job, and is bound to promote public confidence and goodwill. It is sure to convert a lot of borderline pas-

FAA controllers on the job in a scene from FAA's new film, "Flight."

Federal Aviation Agency Has Long List of Films in Work

. . . Tony Jowitt, Chief of FAA's motion picture and photographic section, has a shop full of other films in script or in production.

Training films include: *ATC Radar-Enroute Procedures*, a film for aircraft controllers, written by Harry Muheim and in production with De Frenes Co. in Philadelphia; *ATC Radar-High Altitude Services*, written and produced by Horizon Productions in Kansas City; *Aeromedical Research for Controllers*, will be produced in FAA's motion picture section; *The Supervisor*, an on-the-job-training film for instructors, written by Harry Muheim; *The Aviation Medical Examiner*, written by Earl Pierce of New York; *Revised Holding Pattern Criteria*, produced by Ralph Lopatin of Philadelphia.

A briefing film, directed at all pilots and explaining air traffic controls, titled *What's My Traffic?*, has been written by William Simon and will be produced by Atlas Film Corp. of Chicago; *One Eye on the Instruments*, a film which will explain the value of understanding and using aircraft instruments is out on bid; *Private Pilot*, written by Coe-Peacock, will be a public affairs film for private aviators; and to specifically develop certain portions of the film *Flight*, FAA will produce two separate motion pictures about "air traffic service", written by Coe-Peacock, and "flight standards service", written by William Simon.

Safe Travel for Boating Fans Is Pictured in "People Afloat"

. . . If you're one of the millions operating a small pleasure boat — and if you're smart — there are certain things you'll always check before you hit the water. And there are lots of smart *People Afloat*, according to Phillips Petroleum, sponsors of a 14½-minute picture of that title for use by the American Red Cross.

The film has been designed to motivate more boat-owners into enrolling in the small-craft training courses of the Red Cross. The Coast Guard and the Outboard Boating Club of America are also cooperating in this program.

National Film Studios, Inc. produced *People Afloat* in Chesapeake Bay Area and in

KALART VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

The Dependable One

There's something very comforting about the way a Kalart/Victor projector runs. Whisper quiet. Almost without effort. And above all, dependably. It's *always* ready to put on your program.

One reason is the lubrication system designed exclusively for Kalart/Victor projectors. Oil is metered from a large reservoir on "demand feeding" by means of a wick. Parts are given only the amount of oil they actually require. There can be no leakage because the oil travels *upward* through the wick by capillary action. One filling of this oil reservoir keeps the projector running smoothly for some 1,200 hours, or a full year of heavy use. What efficiency!

Of course, there are a score of other features that contribute to Kalart/Victor's reputation as the *dependable* 16mm sound projector. Your authorized Victor Audio-Visual Dealer will be more than pleased to point them out to you.

Free — "How Industry Profits from Films." Booklet is packed with information on use of audio-visuals in every phase of business, from training to sales. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 12V.

KALART VICTOR

Social Security Procedures Explained in New Color Film

☆ What happens to reports of earnings employers send in on Social Security; how are earnings records kept; and, what happens when a claim for payments is made?

These and many other questions are answered in *The Social Security Story*, a new 14 min., color motion picture produced by Milner-Fenwick, Inc., for the Social Security Administration.

Nancy Carroll, a young newspaper reporter is assigned to do a feature story on the new social security building near Baltimore, Maryland. She persuades her grandfather to accompany her in order to get an older person's viewpoint.

Together they learn the basic idea of old-age, survivors and disability insurance program, and are shown, how, when earnings stop because of the worker's retirement in old age, disability or death, payments are made to him or his dependents to replace lost earnings.

Filled with interesting aspects of social security information and procedure, the film is able to present many not-so-well-known facts about social security that will be of value to both young and old. In addition, the viewer receives a beautiful color tour of the mo headquarters and central rec keeping headquarters.

Prints are available in both and 35mm. Showings can be ranged through the nation district offices of the Social curity Administration.

Atomic Power in Space Effort Is Subject of Latest AEC Film

☆ First use of atomic power in the nation's space effort is featured in a new Atomic Energy Commission film entitled, *Atoms For Peace*.

Produced for non-technical audiences, this 16mm color film describes the development and use of compact nuclear power sources for space under the Commission's Systems for Nuclear Auxiliary Power (SNAP) program.

The 28 minute film shows the two basic concepts of the SNAP program. In one approach, the energy of decay from radioactive isotopes is used to generate electricity directly, without moving parts. This method is being developed by the Martin Marietta Corp.

The other SNAP approach uses the heat from a compact nuclear fission reactor to generate electricity by a turbo-generator system, or by direct conversion. Atomics International, a division of North American Aviation is developing nuclear reactor systems which will provide from 500 to 3,000 watts of electricity in space for one year.

Prints of *Atoms For Space* are available on a free-loan basis from Atomic Energy Commission libraries in the U. S. and through U. S Embassies abroad.

Announce Winners of Canadian Film Awards

Crawley, Meridian Share Honors With National Film Board

TWO CANADIAN FILM producing companies shared honors with the National Film Board in taking six out of eight top prizes in the 14th Annual Canadian Film Awards presented in Toronto on May 26th.

Crawley Films Limited won both top awards in the Public Relations' film group, with honors to *Campus on the Move* and to *Abitibi*, the latter sponsored by Abitibi Power & Paper Company. Crawley received a third first prize for *Project Sentinel*, sponsored by B. A. Oil, and selected as Canada's best Sales & Promotion picture of the year.

A First Award for Training

Meridian Films Limited won top honors among Training & Instruction films for *You Can Go a Long Way*, cited "for imagination in design and excellence in execution."

The Film Board was the Theatrical film winner with *Morning on the Lievre* and was also honored for the best Children's Film. *Dance Squared* was cited in that group for "its gay rhythmic flow of well integrated music and design." The other Film Board winner in motion pictures was *Circle of the Sun* which was judged best among General Information films "for its superb photography, effective editing, and convincing narration.

Judges Cite Crawley Films

In citing Crawley's *Campus on the Move*, the judges noted its "compact, tightly edited story done with technical excellence." The award to *Abitibi* was based on "excellence in photography, lighting and composition; *Project Sentinel* was honored "for excellent realization of purpose, visuals and sound."

The first prize winner among Travel & Recreation films was *Glooscap Country*, produced for the Nova Scotia Information Service, and noted as "an excellent combination of the beauty and Indian folklore of the Bay of Fundy shore in a travelogue of great subtlety."

O. J. Silverthorne, chairman of the Ontario Board of Censors for more than 25 years, received a Special Award "in recognition of his generous interest in the problems of film makers, film users, and film viewers, and particularly his continued helpfulness to the Canadian Film Awards and to the film society movement."

Omega Commercial Is "Best"

Filmed television commercials were included in the Awards program again this year. Chosen best of entries in that field were *Molson's, Fishing*, produced for Cockfield, Brown & Company advertising by Omega Productions, Inc. and *Potpourri*, produced by the National Film Board.

The Canadian Broadcasting Company's film *Word Games* was judged best of entertainment television programs submitted. The first prize winner among Informational Television films was *A Friend to His Country: William Lyon MacKenzie*, also produced by the National Film Board.

Wins the Association Trophy

Awards were also given to the "five best" amateur motion pictures produced in the Dominion last year with the special trophy of the Association of Motion Pictures and Laboratories of Canada going to *Au Temps Des Ombres Blanches*, produced by Claude Savard of Montreal.

Dr. Andrew Stewart, chairman of the Board of Broadcast Governors, presented all seventeen trophies before a luncheon crowd gathered in the Crystal Ballroom of the King Edward Hotel in Toronto on May 26th.

It was noted that more films than in any previous year were entered with 137 films submitted by 39 Canadian film producers in twelve categories. The greatest increase in entries was in the Training and Instruction group which increased from five to 13.

NOW—IMMEDIATE DELIVERY on ACMADE

Heavy volume of sales has resulted in stepped-up production and increased production facilities by the Acmade plant in England. All Acmade models are now available for immediate delivery.

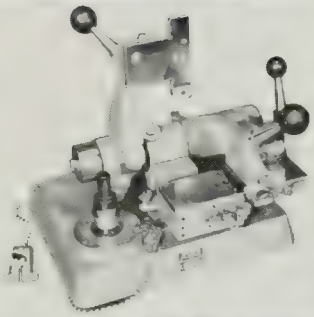
FLORMAN & BABB, Inc.

Proudly Announce
the Appointment of

GORDON ENTERPRISES

5362 N. Cahuenga, N. Hollywood, Cal.
as Exclusive Western Distributor

BEHREND CINE CORP.



161 E. Grand Ave., Chicago 11
as Exclusive
Mid-Western Distributor

These outstanding dealers will carry the complete Acmade line for demonstration and are fully equipped to supply complete maintenance and service.

NEW FROM ACMADE

ACMADE TUNGSTEN PRECISION SPLICER

This moderately priced splicer incorporates new precision features which insure absolute accuracy and safety in splicing. Three models are available: Model 16-16mm., Model 35-35mm., Model 35-16 combination 35mm. and 16mm.

1. The combination 35mm.-16mm. Model features retractable 35mm. **and** 16mm. pins. This permits center placement of the 16mm. pins for A and B roll splicing.

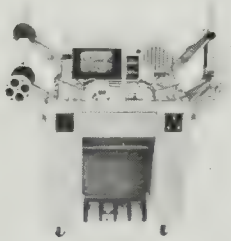
4. Specially designed right-hand pressure block permits easy and accurate back-scraping on all models.

5. Tempered steel springs provide perfect pressure, positioning film firmly during scraping and splicing processes.

6. Thermostatically controlled heater maintains constant 100° temperature.

2. Stainless steel blocks are precision fitted with Tungsten-Carbide inserts for cutting. Cutting edges will remain sharp and last forever.

3. Attached scraper adjustable for depth — fitting jig incorporated on splicer base.



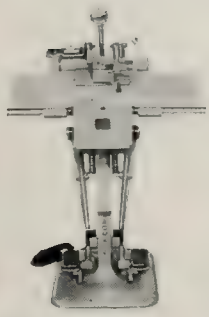
Model 16 — $299

Model 35 — $299

Model 35-16 — $399

ACMADE MARK II EDITING TABLE

Makes Editing Easy!



$2975

f.o.b. New York

Operation of this simple, efficient editing machine can be mastered in minutes. Continuous (non-intermittent) movement provides absolute protection for your film. Instant controls and declutching allows up to 50% greater speed for pic & sound editing. All combinations of 16mm and or 35mm channels, plus magnetic and optical sound available.

WRITE FOR DETAILED BROCHURE

Acmade Foot-Operated Splicer with Tungsten Tipped Blades

Combination
16mm-35mm
Model . . .
$1495

This splicer is constructed, as is usual with ACMADE products, of the finest materials and workmanship. All castings are of the best quality and the top body and cutter arms are seasoned to prevent distortion after machining. The machining is carried out to limits of ± .0005" in order that the cutter blades shall close in a dead parallel manner. The cutter blades are made from stainless steel with Tungsten Carbide inserts, and afterwards ground lapped and polished to a limit of ± .0002" thickness and the cutting edges relieved by 1°. The Tungsten Carbide inserts will have indefinite life and will not require sharpening as with other types. A heater unit is installed in the top body of the machine. The top light in a well glass fitting is attached to the body of the machine and also an inspection light in the waste bin together with cement bottle and brush. A scraper block is supplied and also a scraper block setting jib and support shelf rubber-covered. The whole machine is finished in first quality grey hammer and all metal parts other than cutter blades are hard flash chromed.

Pictures and People in the Month's News

Xerox Theater at Seattle Fair Features a Multi-Screen Show

☆ Final stop for visitors touring the automated "Library of the Future" display offered by the American Library Association at the Seattle World's Fair is the Xerox Theater. Show-stopper at that vantage point is a 10-minute motion picture presentation, utilizing six screens, summarizing the history of man's visual communication since prehistoric days. The show is presented by the Xerox Corporation and was produced by Visualscope, Inc., New York, under the direction of Bob Taylor.

But it's more than just a multiple-screen movie that is holding throngs of visitors at Seattle! The Xerox Theater features a battery of six synchronized projectors and a high-fidelity transistorized sound system developed and manufactured for Xerox and Visualscope

Ed Busch is pictured with Cinesalesman equipment used at Seattle.

by Busch Film & Equipment Company of Saginaw, Michigan.

Features of the projection setup include a mechanical interlock developed by Busch to hold the six projectors in perfect synchronization during the show; each of the six projection units contains one of the Busch patented continous film cartridges, designed to handle its film content during its entire life without rewind or rethreading.

A special sound sensitive amplifier device was developed by the same company for automatic shut-off of all projectors at the end of each showing. Six pictures are projected simultaneously . . . three on one wall of the circular theater and three on the opposite wall but only one projector is used to reproduce sound for all six screens. Six 12" speakers are built into the theater ceiling, one above each screen.

Other Seattle exhibits featuring Busch Cinesalesman projectors include: Standard Oil of California, C & H Sugar Co., Ford Motor Co., and the Washington State Apple Growers Assn.

Don Hershey Elected President of the Screen Directors Guild

☆ Don Hershey has been elected President of the Screen Directors International Guild at the annual election meeting in New York City on May 2. Mr. Hershey succeeds Willard Van Dyke, who served SDIG for two one-year terms.

Other officers elected were: Jack Glenn, 1st Vice President; Joseph Lerner, 2nd Vice President; Howard T. Magwood, Secretary; and Robert J. Kingsley, Treasurer. In addition to these officers, the following were chosen to serve on the Executive Board: Robert Braverman, Shirley Clarke, Charles S. Dubin, Herman J. Engel, Leo Hurwitz, Lewis Jacobs, George Jacobson, Robert K. Sharpe, Willard Van Dyke, Albert Wasserman, Nicholas Webster and, as Alternates, Robert Anderson, William Buckley, Peter H. Cooper, Les Gladman and Charles H. Green.

Elected as Auditing Committee members were: Marc S. Asch, John G. T. Gilmour, Bert Lawrence.

Shirley Clarke is the first woman to become a member of the Executive Board.

George L. George continues as Executive Secretary, Robert Edmonds as his assistant and Business Representative, and Erwin Feldman as General Counsel.

The Guild represents more than 500 motion picture, tape and television directors in the New York area and other parts of the country, as well as directors in Canada, Latin America and Europe.

General Film Lab Complete Key Move in Expansion

☆ The key move in a qua million-dollar expansion of Hollywood plant of General Laboratories has been compl with the opening of a new which houses thirteen cu rooms and a new reception are

A fifth projection room i construction and orders place nearly $140,000 worth of printing equipment for additi production rooms to be op shortly.

William E. Gephart, presi of General Film stated, "Con to some beliefs, the use of is increasing, especially in the cational and industrial fields. current expansion is based on need for greater total produc in both black-and-white and film.

"The new types of equip we are installing will enabl to maintain uniform quality higher processing speeds, speed is a necessity in the mo picture business."

* * *

Show Philadelphia Renewal "Form, Design and the City"

☆ A documentary film de ing Philadelphia's successful of a *comprehensive* urban d program in renewal of its d town area has been produce Reynolds Metals Company.

Form, Design and the City, produced in association with the American Institute of Archit and offers basic guidelines on a city can succeed in the tremendous task of renewing its ce area and achieving high stand of urban design.

Of special interest is a sequ showing how modern Rome developed over the centuries under a central design theme cre by Pope Sixtus V during the pe 1585-1590. Old paintings illustrate the ancient city and its gradual rebuilding, while recent m pictures dramatically highlight the results achieved through Pope Sixtus' design theme.

The 57-minute color film was produced by the De Frenes Company, Philadelphia, in associ with Film Counselors, Inc., New York. It will be used by the AIA in urban design seminars throughout the country and will be available for local showings from AIA chapters.

Home Is Wherever a Volkswagen Can Travel

An Enterprising Trader, Volks Expounds New Opportunities in "A Time Like This"

SPONSOR: Volkswagen of America, Inc.

TITLE: *A Time Like This*, 27 min, color, produced by Marathon International Productions, Inc.

☆ There are few traders in the world's economy with more conspicuous success than Volkswagen. Of course, the car is sound and built well enough to be almost unique, but Volkswagen is more than a maker of good automobiles, it is a living example of the real benefits of free world trade to buyer and seller alike.

Volkswagen expounds its philosophy of international marketing with motion pictures — most notably, recently, with *Five Miles West*, which related the company's home town, Wolfsburg, Germany, to its world-wide trading partners.

The film also drew the comparison of Volkswagen's and Wolfsburg's activities with those just down the road on the other side of the iron curtain. *Five Miles West* has been one of the most popular sponsored motion pictures ever made — with almost 20,000 group showings and over 900 telecasts to date.

Worldwide Showings in Eight Languages

Topping such a whopping success is a difficult proposition but Volkswagen may have done it with a new film for 1962 called *A Time Like This*. This picture — made by Marathon International Productions (as was *Five Miles West*) is sponsored by Volkswagen of America, Inc. — distributor of the car in this country — but the film will be used all over the world in eight different language versions.

A Time Like This is a handsome pictorial treatment of the opportunites for man in free trade. It says that "Once men begin to create, they must exchange. Men must move because goods must move, and then, through the same channels, ideas move."

Shoot Sequences on Four Continents

Marathon producer-director Konstantin Kalser and photographer Karl Malkames traveled to Ireland, Brazil, South Africa and Aust for major sections of the film. It is consta exciting, with much movement, and many o ple doing things.

What this picture says is that traders k Volks are a natural part of all these envi ments. It seems to liken the idea of the u versality of the little beetle-shaped car with e most basic elements of trade — such as c tions of cattle in Ireland, horses in Brazi o wool in Australia.

Distribution in U.S. Via Modern

A Time Like This was written by Re Frank, edited by James Woolley, with pro tion supervision by Kenneth Baldwin. It be distributed by the nationwide exchange o Modern Talking Picture Service, Inc.

Annual Films Unite IBM's World Family

Showing to 40,000 Serving in 92 Lands, Latest Films Emphasize the Human Factor

NHERENTLY A GLOBAL ENTERPRISE embracing 92 countries and 298 sales locations, employing approximately 40,000 persons, ost exclusively nationals of the countries in ch they work, is faced with an unusual task employee relations and orientation.

To relate each individual to the total operan of the company and to increase his indivil effectiveness, development and contribon has been the primary interest of the M World Trade Corporation.

Overseas Film Program Began in 1958

The company has long recognized the effecness of motion pictures in telling a corate story, not only to customers but also to ployees. Beginning in 1958 a film program instituted, designed to leap over language riers and to drive home to employees, in the most remote areas of the world that h of them was playing a vital role in achievthe objective of the company, "World ce Through World Trade".

As it developed, this program has consisted ne annual, 27-minute, b w motion picture ng the first three years since 1958. Each ual film presented a cross-section of IBM rld Trade Corporation's accomplishments significant activities during the preceding

y illustrating a single worker's initiative as nefit to the entire corporation, by showing the company's many plants and laboras are interrelated, and that they draw upon other, by portraying different nationalities cing together for the common good, the three films, *Teamwork for Tomorrow* 58), *Partner in Progress* (1959) and *A Dee of Promise* (1960) helped make each ployee more aware of the importance of his contribution to the overall success story he IBM World Trade Corporation.

Re-Evaluate Activity During Past Year

aving completed this first cycle of annual lis early in 1961, the question arose as to ther the continued use of motion pictures mployee information was desirable, and if sable what new form might be considered he film program which would not only sustin the level of employee interest already cleved, but also would illustrate more subcts and activities with which employees would more local identification within each of five areas in which IBM World Trade ptates.

hese considerations were faced by J. M. holly, Manager of Special Projects, IBM rld Trade Headquarters, New York. One f Mr. Connolly's major responsibilities is to rcide direction, guidance and supervision for BM World Trade motion picture projects.

Decide on a New Format for Past Year

continuing review of the film program, inluding a comprehensive study of world-wide uence reactions, prompted IBM World rade, early in 1961, to stand back momenarily and take stock of the value of conning the use of motion pictures. The decito was made to continue the program. Howve it was recognized that a new format was esable.

In reaching this decision, Mr. Connolly ald Bill Bryant and Jim Handley of Film Enterprises, Inc., New York, with whom he had been engaged in production of the films since their inauguration.

A series of discussions resulted in a program consisting of an annual 15-minute, color, "corporate" motion picture to embrace all of World Trade's areas of operation, which would be supported by four separate 12½-minute, color, "area" films, each covering the specific activities of World Trade in four geographical areas of the world — Europe, Latin America, Asia Pacific and Canada.

People, *Not* Machines, Are Most Important

To inaugurate the new program in early 1961, it was decided that a strong central theme be adopted for the "corporate" film to emphasize the company's awareness that while the world at large very often thinks of IBM in terms only of machines performing all functions in all fields, the reality is that the individual people of IBM are the most important part of the corporation because of their creativity, productivity and service. Without the people there would be no machines. To convey that premise was the objective of the "corporate" film.

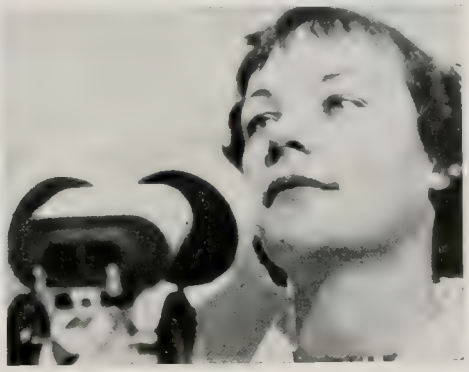
Supporting the "corporate" film, the "area" films would continue to feature highlights of the company's operations in each of the four geographical areas, in terms of what IBM World Trade people had accomplished in each specific area.

Area Films Round Out "Tailored" Program

Distribution was planned for presentation of the "corporate" film joined by its appropriate "area" film, thus tailoring the film program, with a balanced emphasis on the company's world-wide operations with direct interrelation to each area's achievements and activities.

With the new program format defined, the method of financing the five different films had to be resolved equitably within World Trade. It was decided by management that IBM World Trade Corporation Headquarters in New York would assume all production costs of the "corporate" film which embraced all areas.

However, it was decided that each "area film would be the financial responsibility of the management of each of the areas concerned. Film Enterprises, in consultation with Mr. Connolly, therefore negotiated separate contracts with final approval authority by the IBM general managers for each of the four trading areas.



As an accomodation to the producer, with accompanying internal IBM accounting procedures, the four production contracts with IBM World Trade permitted Film Enterprises to draw local currency from the IBM companies in each country in which location costs were to be incurred.

Assign Location Work in 37 Countries

Final payment to the producer was made in U.S. dollars with all such advanced funds deducted in accordance with prevailing exchange rates for each currency involved. Upon agreement with IBM World Trade of the specifications, and financial arrangements, Film Enterprises undertook to establish working relationships with reliable motion picture photographic units to cover in excess of 100 location assignment in 62 cities in 37 countries for which production was planned. Several Film

Films Unite IBM's Family:

(CONTINUED FROM THE PRECEDING PAGE)
Enterprises representatives traveled throughout the world to supervise location photography.

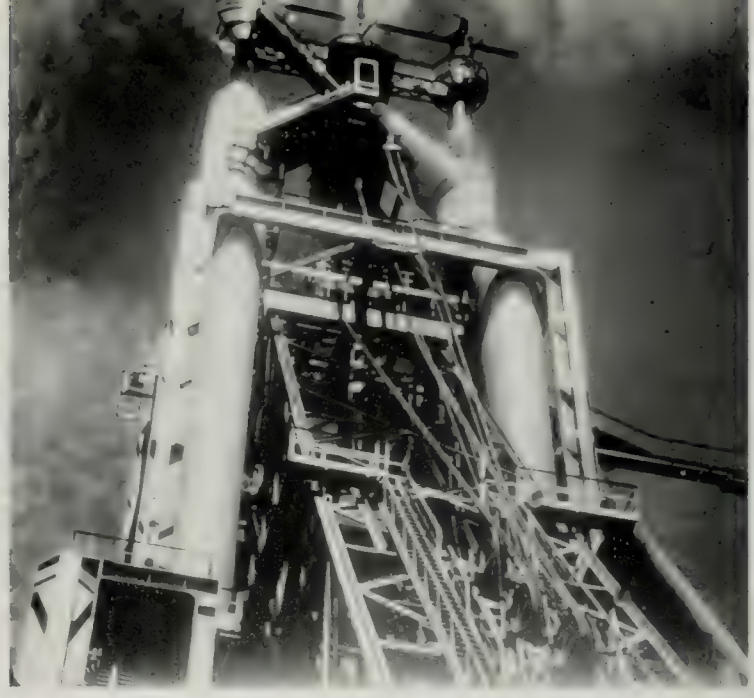
All scripts for the projects were written by Film Enterprises in New York. Production was undertaken in 16mm Ektachrome with all processing to be accomplished in New York. Since photography took place at various times of the year, and not on a continuing or consecutive schedule, accurate planning and careful coordination with film units, IBM World Trade and its customers around the world was essential.

Also necessary to the successful completion of photography was the establishment of professional procedures for film shipment, customs clearances, processing and review of all elements for final production. All editorial and finishing phases of the five films were completed in New York by Film Enterprises.

From One to Seven Language Versions

The completion of the "corporate" film, *IBM Means People*, and the "area" films did not end the job. It was necessary to produce each of the five films in from one to seven language versons. This required English script translation and adaptation to French, German, Italian, Spanish, Portuguese and Japanese, as well as the selection of narrative voices which would be acceptable in the countries concerned.

For the language program, Film Enterprises called upon John Gres, Director, Round Hill International Productions, as a language consultant, to provide the necessary language services to the producer for the successful completion of the program.



Hold Premier Showings Around the Globe

Completion of the productions for release in 1962 also entailed delivery of prints, in appropriate area combinations and languages to various cities and countries around the globe to meet scheduled screening dates. Premier screenings were scheduled by IBM World Trade in Sydney, Hong Kong, Tokyo, Acapulco, Caracas, Toronto, Paris, Vienna and Salisbury, and Southern Rhodesia.

The IBM World Trade employee film program is a good example of the sponsored motion picture communicating effectively to an international audience. Evidence of the success of the 1961 effort is that production is now under way for a similar program in 1962.

Japan Rolls Steel on Mills from the U.S.A

SPONSOR: Yawata Iron & Steel Company

TITLE: *Creation of New Wealth*, 28½ min., color, produced by Iwanami Productions (Japan) and Allegro Productions (New York).

☆ The sea is boldly pushed back from the land to make room for a giant new steel plant in this new film released by its steel manufacturing sponsor in Japan to American audiences through Sterling Movies U.S.A.

A great part of the film's drama lies in these scenes which show how the offshore land is recovered to provide the foundation for the largest blast furnace in the Orient.

What is unusual and impressive about the film is in its concentration on thousands of skillful, hard-working men *working* at a rough job for real men. These guys in their baggy pants are really sweating and putting all out to do the job. It makes your back ache just to watch them.

This is very different from almost all new American films. We stress so much our shiny new machines, our levers and dials and the crisp white-coated men who twist them. While this is all to the good, it is a thrill for a change to see men really work as hard as they do in this picture — and we feel the triumph of a job well-done as the big blast furnace finally goes into operation after three hard years of construction work.

Animated scenes are used to describe clearly important aspects of this giant construction as well as to show the complex processes used to produce quality steel.

For American audiences, *Creation of New Wealth* clearly demonstrates the importance of Japan's economic well-being to the rest of the free world. It also shows how much trade is a two-way street: many of the machines seen are American — big Mesta rolling mills from Pittsburgh, and many others.

Creation of New Wealth has won many prizes, and seems destined to win many more. Originally produced as an hour-long motion picture by Iwanami Productions, one of Japan's largest industrial film firms, it features fine photography and a superb musical score. For American audiences the film was completely re-edited and narrated from a new script before using the Japanese musical effects. The excellent work was done by Allegro Productions, New York.

Renault Salesmen Learn About "Prospecting by Phone"

SPONSOR: Renault, Inc.

TITLE: *Prospecting By Phone*, (SSF) produced by Gotham Film Productions.

☆ Renault, Inc., is currently using this sound slidefilm to encourage dealers' salesmen to devote part of each day to "cold" prospecting by phone.

This "hard sell" technique might seem to be an adoption of American methods, yet, the film, *Prospecting By Phone*, is based on methods used successfully by Renault worldwide, not only in France, but also in South Africa, Canada, Australia and other countries.

The film suggests that Renault salesmen make ten phone contacts a day and provides hints on how to catch and hold a prospect's interests in the first ten seconds of the call.

Other points of advice: the best times to call are 10-12 A.M., 1:30-4:30 P.M. and 6:30-9:30 P.M.; talk with a real smile on your face as well as in your voice; don't be afraid to call a businessman at his office — be a real eager beaver; keep control of the call — don't let the prospect off the hook for a second.

Prospecting By Phone is colorful and well-mounted. It is part of a series of films Renault plans to make available for dealer use. Producer is Gotham Film Productions, N. Y.

Caltex Bridges Language Barrier

—Library of 24 Pictures With One Objective: Show How the Other Half Lives

ALIFORNIA TEXAS OIL CORPORATION is a leading petroleum company operating in over 70 countries of the Eastern Hemi-ere. Its business involves making friends customers of over a billion of the world's ple. Caltex works at this job by operating tly in accordance with local laws, customs practices, and by helping to contribute to economic development of the countries in h it serves.

significant contribution to the economic lopment of Caltex's host countries is an nsive series of motion pictures which the pany and its affiliates have been producing distributing for the past eight years.

. . . a Climate for Constructive Progress"

ccording to William F. Bramdstedt, Chair- of the Board, Caltex uses these films, dealing with one of the countries where orks, because " we feel that international erstanding will be furthered through the eased knowledge of one country by other ntries. This understanding provides the ssary climate for constructive progress in onal welfare, in science and the arts, as as in business."

We hope," Mr. Bramstedt has said, "that ugh our Caltex International films which cross the formidable barriers posed by nuage, we are making a definite contribu- to the increased understanding among peo- that is important to all of us."

,000 Prints in Dozens of Languages . . .

altex now has 24 films in circulation, cov- g countries from Ireland, through Europe, ca and Asia to Australia and the Philip- s.

pecial films have been made on such sub- as oil tankers and New York's Metropoli- Museum of Art. Six thousand prints, in ns of different languages, are currently ulating around the world.

charge of the Caltex activity is the com- 's Public Relations Manager, Robert E. Gibbon, whose office is in New York. FitzGibbon says that although Caltex's are non-commercial, the company is not ing them for any altruistic purposes. It es them because the films, in tangible fits received, are very much worth the ey they cost.

ach operating company orders its own its of any films it wants to use. Orders each new film subject have remained high the inception of the program, and are tantly increasing. This is excellent proof he films' usefulness in the operating areas.

Films Travel by Camel-Back and Dog Sled

hink of almost any film distribution sys- ever devised — and Caltex has probably it — transporting prints by camel-back dogsled — and showing them in plush run theaters and frigid snowed-in shacks e the Arctic Circle.

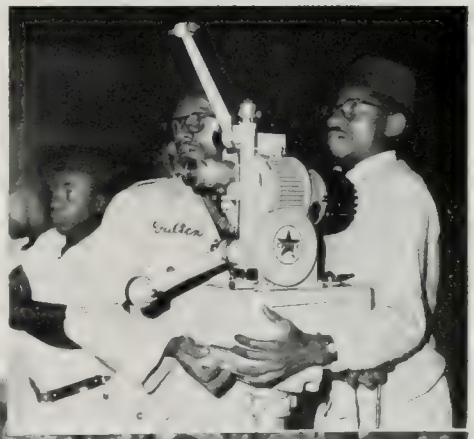
altex films are regularly seen on television in 15 countries, and on theatre screens in seven countries.

Twelve governments distribute Caltex films through their own official channels. In eigh countries, films are travelled about in "film vans" for open air showings to townspeople and to groups of wayside campers, through rear projection screens built into the sides of the vans.

Besides informing and entertaining several million viewers each year, Caltex films achieve hundreds of favorable comments in newspapers and magazines around the world. They have recently been praised by a King (of Denmark) and a Queen (of Thailand), as well as by thousands of "men on the street."

Scene in "Crossroads Europe" shows casting of mountain rye near Vispeerterminen, Switzerland.

These Episodes Show Effect of Program



. . . In Delft, Holland, last year, 5,000 burghers saw a new Caltex film in the town square. In the Philippines, motorized barges travel inland waterways showing films for audiences on bankside, or on other barges. (This is very good for marine business, Caltex has found.)

* * *

. . . A recent issue of Caltex's magazine, Oil Progress, tells how films are brought to a Northern Norway power project, Ovre Vinstra, via a Muskeg Tractor which hauls films and projector once a month and often through deep snows in weather sometimes at 30 degrees below zero. The films, it is said, contribute as much, in their way, to the morale of the construction workers as the company's fuels and lubricants do to the smooth running of vehicles and machines operated at the site.

Mobile cinema vans, like this unit in Tanganyika, bring Caltex films to loneliest villages . . .

At left: uniformed projectionists with Caltex' projector have eager, appreciative audience among the villagers pictured in scene below.

Dancers of the Royal Danish Ballet are featured in scene from Caltex film, "Delightful Denmark."

Caltex Pictures Span World:

(CONTINUED FROM PRECEDING PAGE 35)

. . . In Sweden, Caltex films are shown as part of road safety meetings held all over the country. In Ponkoping, for instance, the meetings were announced by loud speakers on police cars. 800 people saw Caltex and safety films that night, and 1,100 more viewed nonstop showings of Caltex films at the local cinema next day.

* * *

. . . In East Africa, Caltex films in the Koasa language are shown to audiences of up to a thousand people at a time. It is said that this might have something to do with leading place of Start Kerosene, a Caltex product, in this market.

* * *

. . . The film, *France Is a Garden*, has reached an audience of 25 million people thus far.

* * *

. . . The United States Information Agency office in Beirut has made 96 showings of Caltex films in the past seven months.

* * *

. . . *Art Heritage*, the Caltex film on the Metropolitan Museum of Art, was the first, and thus far only, sponsored film ever to be shown on the Norwegian television network. It received the highest praise from all Oslo newspapers. In addition, the United States Information Agency has produced 321 prints of this title in both 16mm and 35mm. The agency is making arrangements to distribute these prints in 21 different languages to USIS posts in 72 countries all over the world.

* * *

. . . In the United States, as a service to the governments of the countries in which Caltex operates, films have been released to television stations (through Sterling Movies U.S.A.).

* * *

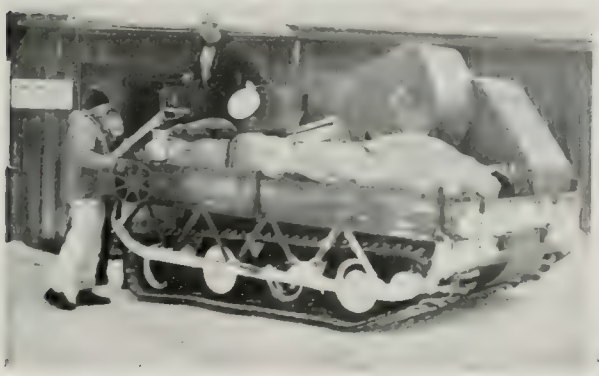
. . . The Army, Navy and Air Force have used the Caltex films worldwide as a means of orienting servicemen who are called upon to visit or serve in some of the 70 countries.

Select Producer in the Featured Locale

Caltex motion pictures are usually made by the professional production company which is closest to the film's locale, providing this producer is thoroughly competent and has adequate facilities. Where possible, this will be a producer from the country being filmed, but it may be one from a nearby country. Mr. FitzGibbon controls all details of the work in progress from New York. He has retained Film Counselors, Inc., New York, to undertake a good deal of the technical supervision of the films. Musical backgrounds of a distinct national character are used, often composed and performed by leading musicians of the country being filmed.

This picturesque Shiek is seen in the Caltex picture on Bahrain, titled "Pearl of the Gulf."

The content of each film is based on a theme which captures the spirit of the people's national character. Caltex works closely with cultural representatives of the governments involved, checking customs, taste, history, culture and tradition shown in the film for accuracy. This has resulted in a long string of endorsements by government officials of countries portrayed.



Linda Lacson and Ben Reyes are the handson pictured in a scene from "Voyage of Disco the Caltex film on life in the Philippines.

The only credits to Caltex are visual in the titles or occasionally integrated log unobtrusively and tastefully in the story.

"Talk in Friendly Way to Millions . .

Caltex now has about two million d invested in motion picture production an tribution activities. As films become dat perhaps in five or ten years — many of will be replaced with new subjects, f overall program is a continuing one an placeable in the company's plans.

As Board Chairman Bramstedt pu "These films can talk in a very friendl to millions of people that we otherwise never reach. The program is a cultu vestment that we owe to the nations in we do business. We believe it is a goo service that we, as members of an intern industry, owe to our neighbors, to ou country, and to American interests in th ern Hemisphere."

Pictured at left is the Muskeg Tractor which carries projector and Caltex' prints once a month to isolated construction crews at a Northern Norway construction project near Ovre Vinstra. The tractor makes its journey over deep snows in weather that drops to 30 degrees below zero. But films are welcomed by the men; are said to make an important contribution to their morale.

Judge International Ad Films

☆ Widely popular throughout Europe brief advertising playlets for the screen presentation. These commer films and their television counterparts being currently judged for award ho at the 9th International Advertising F Festival at Venice, Italy, in June.

Out of the total of 920 entries in groups, Great Britain leads with 80 ema entries and a total of 189 televi spots. 79 theater playlets and 30 spots represent France; Italy has 67 tries in the Cinema group; 43 TV s West Germany submitted 34 the films; 44 TV commercials. The U.S. only six in the Cinema group but tered 45 television spots.

Here's your chance to see the new motion picture . . .

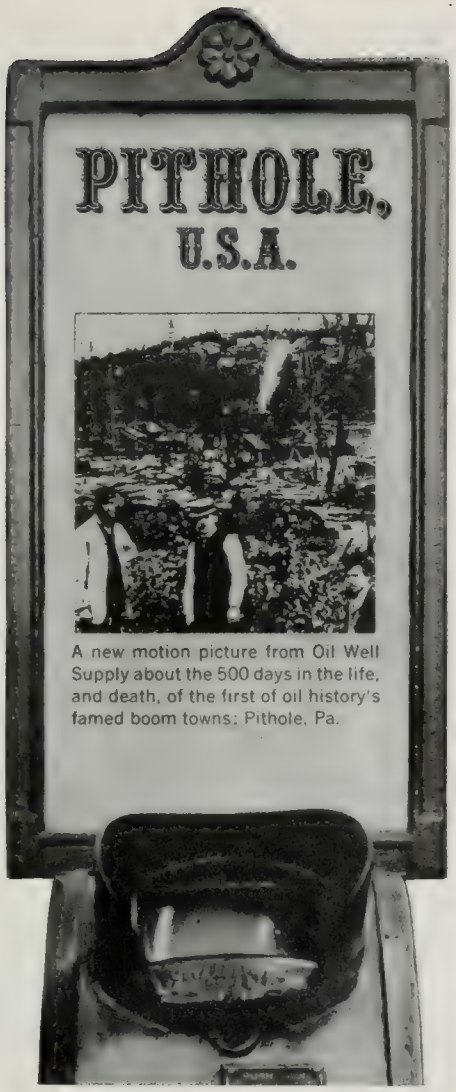
PITHOLE, U.S.A.

marking the 100th Anniversary of
Oil Well Supply Division of United States Steel

Screen Magic Re-Creates History from Stills of 1860's

THESE MATURING YEARS of U. S. history corporate "birthdays" marking 25, 50 and years of business existence are becoming re frequent. Often, there's an "anniversary " involved in the observance and the film's ker is challenged to re-create the past with lity, while still retaining audience appeal screen interest.

For the 100th Anniversary Year of the Oil ll Supply Division of United States Steel, ding, Inc., has turned out a 13-minute the- cal short titled, *Pithole, U. S. A.* The picture re than meets the first requirement in its olute fidelity to the subject and its popularity h theater managers and patrons across the ntry indicates that it has more than fulfilled premise of genuine audience appeal.



Pithole, Pa., the oil boom town that was n, boomed and died within a span of 500 s in the early 1860's, was the site of the ld's first oil pipeline and a fitting subject Oil Well Supply's sponsorship. But not a e of the town remains on the site. Without ding expensive sets, the producer has skill- y used the still-pictures-in-motion technique bring the town to life on the screen.

The miracle was made possible through ac- to thousands of pictures taken by a pioneer tographer, John Mather, who recorded the entire saga of Pithole on the fine glass negatives of his day. Many of these were lost in a fire but thousands remain at the historic Drake Well site in Titusville, Pa., and it was to this collection that Wilding turned for the story of *Pithole*.

Through the cooperation of the Historical and Museum Commission of the Commonwealth of Pennsylvania, these 97-year-old negatives were borrowed and their images transferred to present acetate negatives. The final result was the 13-minute film applauded by premiere audiences at Titusville last February and at Dallas, Texas, home of Oil Well Supply, later that same month.

D. S. Stevens, executive director of the Pennsylvania Historical and Museum Commission, said, "Oil Well Supply Division of United States Steel is to be complimented for the authenticity with which they have recaptured the exciting flavor of the life and times of Pithole — in fact, those earliest days of the oil industry. Anyone interested in the history of America or the oil industry will enjoy the film."

Pithole's boom was short-lived but its memory is being recreated nightly on theater screens across the land to graphically illustrate the risk and daring so characteristic of the world's continuing, dramatic search for oil.

A new motion picture from Oil Well Supply about the 500 days in the life, and death, of the first of oil history's famed boom towns: Pithole, Pa.

date was January 7, 1865, in Venango nty, Cornplanter Township, Pennsylvania on this sleepy hillside farm . . .

. . . when the Frazier Well came in. It took only weeks to give one of oil history's wildest boom towns a name . . .

Pithole, U. S. A., where the main street was soon jammed with hotels, saloons and boarding houses, thronged with boomers!

e were many who built their futures by g on the spot with things oilmen had to b: lumber, rope, engines, tools.

Drinking water sold for more than oil . . . but that soon ran dry, too, and Pithole was actually on its way into history.

Today, there is no Pithole City . . . not even a ghost town! These ruins, since erased by time, were mindful of those 500 hectic days!

Gas Helps to Make This a "Wonderful Age!"

Consolidated Natural Gas System Has a Tuneful New Picture to Prove Its Point

SPONSOR: Consolidated Natural Gas System.

TITLE: *This Wonderful Age*, 28 min., color, produced by MPO Productions.

☆ Taking a picture of something you can't see can be a tricky kind of business — like making a movie about natural gas. But it can be done — as exemplified by this pretty and tuneful new film which is as gay as a kitchen full of teen-agers — cooking with gas.

When Consolidated's Motion Picture Committee, under Chairman John S. McElwain, came to MPO to talk about making a film they had a library of facts to be included in it. And yet they didn't want the usual kind of nuts and bolts and pontifical prexies of some industrial films — they wanted something different and "off-beat". The result is a film that gives its viewers hundreds of facts about natural gas and a whale of a good time learning them.

Its Musical Background is Memorable

An original score by Sol Kaplan and lyrics by Joe March provide a sound track that vibrates with the rhythmic beat of New Orleans jazz and the slow swing of old spirituals and folk ballads. Much of the full color location photography is used with an off-screen singing narrative. Featured narrator is pretty actress and vocalist Louise O'Brien. Blues singer Rosette LeNoir sings a show-stopper blues number about an old lamplighter.

Viewers will be surprised by the vast number of facts that are easily picked up during the film, facts that cover every aspect of the industry from its tax structure to the technical operation of a compressor station. And above all — the film makes us aware of the important part played by natural gas in helping to make the *Wonderful Age* we live in. Shown are the everyday uses of natural gas, in kitchens and heating — and in industry, too.

This Picture Could Also Serve Others

Consolidated Natural Gas System is formed by five separate companies which serve all or parts of Ohio, Western Pennsylvania, West Virginia and Upper New York state. The film, while covering this area in general, could easily be adapted to be useful to marketing situations of many other natural gas companies.

Top credits on the film go to MPO staff people Marvin Rothenberg, producer-director; Lewis Jacobs, associate producer; and Tony Brooke, cinematographer.

The Interchangeable Filmakers

☆ Marvin Rothenberg, a leading producer-director of TV commercials for many years, returned to the industrial film field for this picture and enjoyed the project greatly. He pointed out recently that people in the often-separated industrial field and the commercial field have talents which should be used interchangeably more often.

Right now, such MPO "long-film" specialists as Victor Solow and the Lerner-Ritter team are working on commercials, while other MPO commercials people are getting and welcoming public relations and industrial film assignments.

Rothenberg believes that there will be even more of this in the future. Commercials are getting to be more and more "documentary" and industrial films, he thinks, are seeking the slickness and modernity of the up-to-date prize-winning commercials.

This Masonite Film Help Salesmen Build the Orde

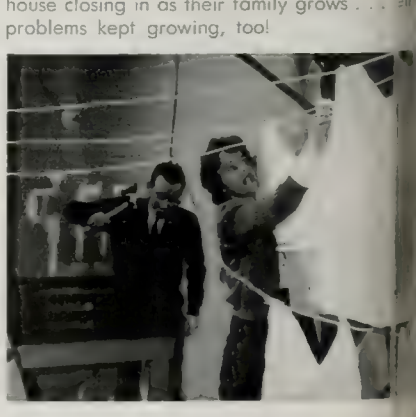
"The Incredible Shrinking House"

SPONSOR: The Masonite Corporation.

TITLE: *The Incredible Shrinking House* [illegible] min. b&w *and* color, produced by Holl[illegible] Wegman Productions.

☆ A major producer of building materials [illegible] Chicago-based Masonite Corporation has [illegible] ed to the screen media from time to time [illegible] most recent motion picture, *The Incred[illegible] Shrinking House*, is a noteworthy 22-mi[illegible] subject that was originally intended to [illegible] introduce dealer salesmen to the broad a[illegible] cations of the company's hardboard line.

Because it also has a lot of consumer [illegible] peal, *The Shrinking House* will also shortl[illegible] viewed in a new 13½-minute television [illegible] sion in which sales pointers have been [illegible] emphasized. Behind all this is the fascin[illegible] background of technique employed by the [illegible] ducer, Holland-Wegman, to develop both [illegible] "Shrinking House" idea and to build audi[illegible] interest.



Stylized Action of the Early Cinema

The old "silent-movie" techniques were l[illegible] ally utilized as the story introduces n[illegible] weds, John and Mary, as they come out o[illegible] period of wedded bliss and begin their [illegible] family. Although they appear in modern c[illegible] all their actions are in the stylized, dra[illegible] cliches of the early cinema. Sub-titles are s[illegible] in the florid style of the period.

As the family grows larger, their walls sli[illegible] to closet proportions. Action is speeded u[illegible] the screen to the kaleidoscopic pace of a ey[illegible] stone comedy. Piano background music chan[illegible] from "hearts and flowers" to a frantic "cl[illegible]" theme. The problems, arguments and dra[illegible] of John and Mary are finally climaxed [illegible] trip to their lumber dealer, who introdu[illegible] them to versatile Masonite panels.

At this point, scenes dissolve from blac[illegible] white to color and the audience (as we [illegible] the players) is treated to a demonstrati[illegible] all the uses and applications of the pro[illegible] John and Mary begin to remodel their "shr[illegible]

John and Mary find the walls of their [illegible] house closing in as their family grows . . . [illegible] problems kept growing, too!

n house" and as the workmen ict the first sheet of Masonite, h scene again reverts to full een color.

.ogic Behind the Story Line

The success of retail building terial sales hinges on satisfy- customer needs, which the *esman* must uncover. A man o comes in to buy some nails iously needs a hammer.

Masonite produces a large va- ty of hardboard panels suit- le for both exterior and interior . A story line was necessary t would enable the producer to lict as many "needs" as pos- le, thus reminding the salesman all the potential uses of Mason- t boards. Naturally, all these

After remodeling, rooms are spa- ious, modern, bright with color.

eeds and uses" are seldom found hin one home. A situation was ded that would permit some ht exaggeration. The old fash- ed silent movie technique was h perfect solution.

The film was written and ected by Norman Tolson; pho- raphy was handled by John es and Hans Ueckeroth.

TV Distribution by Sterling

A whopping success along the as front, *The Shrinking House* uld do well as a public-service evision offering. Sterling Movies A will handle the TV version.

As the first panels of Masonite ardboard begin to rise, film's rges resume their color hues.

By Selecting a new and "honest" brand of commercial as tops in almost every category this year, the advertising-industry jurors of the American TV Commercials Festival have given good indication that TV's next cycle of spots will probably be documentary low-sell and natural-looking. Animation fared poorly this year, and optical effects were used only moderately, though sometimes with telling impact.

Award winners were screened last month in New York (May 4) at a luncheon in the Grand Ballroom of the Waldorf Astoria Hotel. Later Festival screenings were presented in Chicago, Toronto, Dallas and Los Angeles.

Edie Adams and Stan Freberg

New York's gala affair— a full house — heard featured speaker Edie Adams ("best spokesman") say that commercials were a real challenge for an actress because the performances were often seen over and over again — and had to be perfect. She said the pay was fine, however. Stan Freberg (Best: Packaged Foods, and a Special Citation, to boot) took more pot shots at the "hard sell" practicioners — his long-time favorite target.

The American TV Commercials Festival — the third annual event directed by Wallace A. Ross — awards gold satuettes to 30 "Best of Product Category" winners plus seven citations for Advertising Achievement in specific areas or markets, plus Citations for Craftsmanship in 14 categories. Several of the awards were made in the name of prominent industry suppliers — Eastman Kodak Company, Minnesota Mining & Manufacturing, the Motion Picture Editors Union, the Screen Directors International Guild, and others.

Judged by Leading Ad Execs

Winners were selected by a TV Commercials Council of prominent advertising executives voting in five regional advertising centers (East, Midwest, Southwest, West Coast and Canada), who judged 1254 entries.

Videotape producers withdrew en masse from the Festival two weeks before awards day. They protested that while their product would be shown on small-screen TV sets, film winners (some in color) would be projected on a large screen, and the comparison would be unfavorable to the taped winners and finalists. 160 of the entries (out of 1254) were on tape. Tape winners were shown on

Coast-to-coast American TV Commercials' ceremonies followed the N.Y. program. Here director Wally Ross addresses luncheon at Chicago.

The Year's Best Television Commercials

Jurors Cite 51 at Third American TV Commercials Festival

TV monitors — as scheduled — despite the disagreement.

In the morning, prior to the Awards luncheon, a workshop on techniques — part of the Festival activities — featured members of the Film Producers Association of New York, and informative talks by Stockton Helffrich, Manager of the National Association

Marc Asch is introduced at N.Y. Workshop by Robert Bergmann.

of Broadcasters New York Code Office, and TV Consultant Harry MacMahan.

Robert Bergmann (Filmex), FPA Public Relations Chairman, conducted the producers' seminar, and introduced speakers who described such technically complex commercials as Maxwell House's *Cup-and-a-Half* (TV Graphics), a Sweetheart Soap spot (Robert Lawrence), Ford's *Seascape* (Filmways), Chevrolet's *City* (EUE), United Brewer's Foundation's *I Like Beer* (MPO), Carter's Pills' *Butterfly* (Filmex), and Sinclair's *Dinosaur* (Van Praag).

Most fascinating was Bob Bergmann's own entry in the seminar discussion. The Carter's Pills' commercial called for a butterfly to fly in a window, land on a pill bottle and fly out again. Production had to be live, and shooting had to be done in November, well past the local season for butterflies.

Van Praag Productions' Marc Asch demonstrated two of his own creations — dinosaurs — which play an important part in Sinclair Oil's TV campaign for Dino gasoline. These small beasts were originally commissioned to the best model makers in New York — with no success.

With deadlines zooming up, Asch finally turned model-maker himself — constructed a dinosaur that is self-powered, walks realistically, swings its head and tail, and lights up its eyes. On television, this realistic creature is seen walking down Times Square and on the Grand Central overpass. Filming was done with the blue matte process.

These demonstrations illustrate the dedication of skilled film producers in carrying out the fanciful demands of imaginative copywriters.

Kellogg's Howard List receives a trophy for best Cereal spot from Festival Director Wallace Ross.

WINNERS OF AMERICAN TV COMMERCIAL AWARDS

"Best of Category" Winners

Series: Alcoa, "Qualities of Aluminum." Producer: On Film. Agency: Fuller & Smith & Ross, N.Y.

Apparel: DuPont, "Sweaters of Orlon." Producer: Elliot, Unger & Elliot. Agency: BBD&O, N.Y.

GE Coffeemaker's "Peek-a-Brew" (by Elektra) was judged best of the Home Appliance entries.

Appliances (Home): GE Coffeemaker, "Peek-a-Brew." Producer: Elektra Studios. Agency: Maxon, N.Y.

Appliances (Office): Xerox 914 Copier, "Little Girl." Producer: Elliot, Unger & Elliot. Agency: Papert, Koenig & Lois, N.Y.

Automobiles: Chevrolet Corvair, "Swamp." Producer: Woodburn & Walsh. Agency: Campbell-Ewald, Detroit.

Auto Accessories: Autolite Batteries, "Micro-Interior." Producer: Sarra, N.Y. Agency: BBD&O, N.Y.

Baked Goods & Confections: Oreos, "Little Girls Have Pretty Curls." Producer: Morris Engel. Agency: McCann-Erickson, N.Y.

Baking Mixes: Pillsbury Yellow Cake Mix, "Fun." Producer: On Film. Agency: Leo Burnett, Chicago.

Banks: Bankamericard, "Symphony." Producer: Filmfair. Agency: Johnson & Lewis, San Francisco.

Beers & Wines: Piel's, "Beach." Producer: Screen Gems. Agency: Young & Rubicam, N.Y.

Kellogg's intriguing "Package Reader" garnered top award for MPO in the Cereals category.

Cereals: Kellogg's Corn Flakes, "Package Reader. Producer: MPO, Hollywood. Agency: Leo Burnett, Chicago.

Cigars & Cigarettes: Winston, "Match Folders." Producer: Pelican Films. Agency: William Esty, N. Y.

Cleansers & Waxes: Windex, "John, Mary & George." Producer: MPO, N.Y. Agency: Young & Rubicam, N.Y.

Coffee & Tea: Instant Maxwell House Coffee, "Cup and a Half." Producer: TV Graphics. Agency: Benton & Bowles, N.Y.

Cosmetics & Toiletries: Factor Nail Polish & Lipstick, "Ooh La California." Producer: Filmfair. Agency: Carson Roberts, LA.

Dairy & Margerines: American Dairy, "Butter Crust Pie." Producer: Sarra, N.Y. Agency: Campbell-Mithun, Chicago.

The many and varied shapes, sizes of cushions fashioned out of Urethane are pictured in this scene.

Facts About Urethane Aid Furniture Sales

A DuPont Picture, Showing Urethane Foam's Benefits, Gets to "The Heart of Comfort"

SPONSOR: E. I. DuPont de Nemours & Company, Elastomer Chemicals Department.

TITLE: *Urethane Foam: The Heart of Comfort*, 15 min, color. Produced by Audio Productions, Inc.

☆ In this film DuPont is about as far away from the ultimate consumer as possible. DuPont makes a chemical called Hylene; sells it to manufacturers of Urethane foam; the foam people sell to furniture manufacturers; the furniture makers sell to their dealers and the dealer sells to you and me.

Customers Seen and Heard in Key Roles

Consumers have an important role in the picture, however. They are shown — candidly — and overheard, while voicing typical demands and complaints. They want mattresses that won't sag and will stand up to the deadly assault of four active kids. They insist on longevity, something softer (or firmer), noncrumbling, light weight and resistant to mildew. Of course, the whole point of the film is that new Urethane foam made with DuPont Hylene provides all of these things.

The Heart of Comfort is designed to be used principally by furniture manufacturers and dealers to show their salespeople the fine points of the new product. It will tell them that Urethane foam is not at all a "substitute" for foam rubber but a substance with a dozen or more unique qualities not possessed by foam rubber, plus having just about all the good characteristics that have made foam furniture and bedding so popular.

Limbo Backgrounds Painted With Light

The film is not elaborate in the sense of opulent sets, but it is most attractive and appropriate to its purpose. Limbo backgrounds are skillfully painted with pastel lights to remove all sense of emptiness. Good technical animation and effects sequences serve to equate Hylene with such other DuPont discoveries as Nylon, Orlon and Dacron.

(CASE HISTORIES CONTINUED ON NEXT PAGE)

AN OUTSTANDING PICTURE JOINS THE AIR FORCE SPONSORED FILM PROGRAM

The New Propellants: Key to Outer Space?

"Out of This World" Documents Story of Propulsion; Hercules Role in Prologue

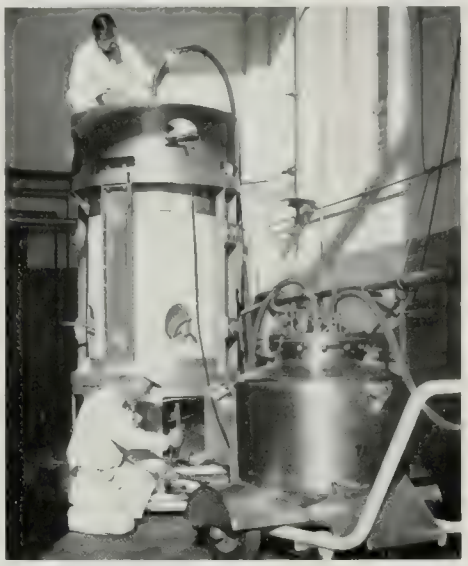
SPONSOR: Hercules Powder Company

TITLE: *Out of This World*, 15 min, color, produced by Farrell & Gage Films.

☆ Day after day, month after month, the heavens lose more of their mysteries to the inquiring mind of man. It will be only a matter of ever lessening time before man moves in — to explore — to build — even to live on the threshold of the universe. And the means are at hand — the key? Chemical propulsion.

So says this new motion picture recently released as a part of the United States Air Force's sponsored film program. *Out of This World* is a thoroughly workmanlike document of propulsion, beginning with animated historical notes on early man's experiences with propulsion — foot power, to get away from that hungry tyrannosaur! — through bicycles, automobiles and piston engine planes to jets and rockets.

Remember the Skyrockets on the Fourth?



Of course, man has known of rocket propulsion for hundreds of years — as witness the Fourth of July skyrocket, of ancient heritage. The film shows examples of liquid (V-2, etc.) and solid-chemical (Thor, Minuteman, etc.) rockets. It explains advantages of liquid propellants (easy valve control, liquid cooling) and disadvantages (extremely high volatility, elaborate "hardware").

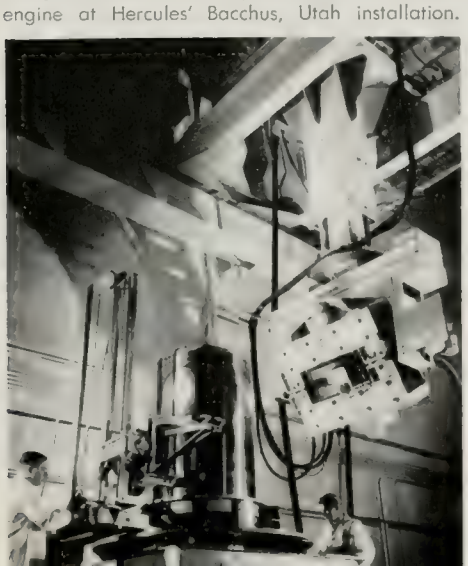
Solid propellants now offer most of the working qualities of liquid, and have other advantages — they are easily manufactured and stockpiled — can be controlled with less elaborate mechanisms.

Chemical Propellants Hold Today's Key

New kinds of propulsion are now in research — nuclear and ion engines may be perfected in the future, but for now and some time to come, chemical propulsion is the keystone to experiments and practical work in astronautics.

Hercules Powder Company is a leading producer of solid propellants. But in keeping with the standards of the Air Force sponsored film program, *Out of This World* is entirely non-commercial, and several hundred prints are now in use for this purpose.

Technician adds a plasticizer to gel the grain during the solid propellant casting operation.



Hercules, however, will also use the film internally for employee information showings, and, accompanied with a *Prologue* film, as a selling tool to use with its customers and prospective customers.

A Prologue on Hercules' Contributions

The prologue shows exactly what Hercules has done in the field — power for war-time bazookas, and for Polaris, Minuteman, Mighty Mouse, Snark, Terrier, Honest John, Nike, and the big new Antares.

Out of This World, a film of outstanding technical and artistic quality, and its five-minute companion *Prologue* are a good example of how industry can contribute greatly to the Armed Forces informational programs, yet give full service to the corporation's own needs as well.

Using the Betatron to inspect a solid propellant engine at Hercules' Bacchus, Utah installation.

Delta Airlines Sponsors Two Films

☆ Two bright, new travel promotion pictures have joined the growing film library of Delta Airlines within recent weeks.

Produced by Fred Niles Communications Centers for Delta were: *Road in the Sky*, a 14½-minute color documentary for distribution in 37 states by Modern Talking Picture Service, Inc. *Let Yourself Go*, another 14½-minute picture, features West Coast and Las Vegas attractions and will be distributed only in seven Southeastern states.

A pictorial report on both films is scheduled for these pages next month. Unique production techniques merit sponsor attention to both of these current Delta offerings.

Cyanamid Helps to Achieve

Victory Over the Mosquit

First Nationwide Survey of Problen

SPONSOR: American Cyanamid Company

TITLE: *Modern Mosquito Control*, 27½ color, produced by Tiesler Productions.

☆ Sixty years ago, the American people with the mosquito problem. Then, mosq borne diseases were recognized and co of mosquitoes became imperative.

Today, mosquito-borne diseases have practically eliminated from this country

The Continuing Struggle for Control

But victory is not easy. In reality, most control is a continuing battle, for the quito develops immunity to man's co techniques. And so the chain of control never weaken in order to safeguard the we have already achieved during the pas years.

In this film, we see how successful co is the result of organized professional e based upon a thorough knowledge of the quito, its habits and life cycle.

We are shown how technical entomolo knowledge and practical everyday control cedures work hand in hand. And how cooperation and coordination of control thorities and conservation officials, as we state and federal research departments is e ial in maintaining control.

There are over 140 known mosquito sp in the United States. Control methods vary from state to state depending on e tiveness, economy and local conditions.

A First Survey of Nationwide Efforts

This film is an important contributio American Cyanamid because it is the over-all survey on a national basis. The operation of the various agencies involve mosquito abatement from coast to coast vides the interesting authentic backgroun the picture.

One of the prime factors of interest t general audience, who perhaps have take granted their freedom from mosquito-b diseases and mosquito irritation, is the nee a safe, efficient chemical control to aug

Scene in American Cyanamid's film shows spraying Florida swamp to control mosq

dern physical control methods. American namid produces such a chemical.

With the disease factor under control on tically all fronts, a secondary considera- — mosquito irritation, and its effect on real estate values, business and recrea- al areas, is an important part of mosquito rol efforts.

Population Growth a Spur to Control

s the population grows, so grows the de- d for more space in which to live and play. y often such areas were formerly inhabited by mosquitoes.

his film points out how control of that dangerous pest, the mosquito, is essential eeping these areas *safe* as well as com- ible.

* * *

oducer Hans Tiesler prepares mosquitos out to hatch for close-up photography.

Portrait of a Man With Mission

Hans Tiesler, producer of *Modern Mosquito Control*, spent almost a year vestigating the habits and habitats of e mosquito while making this film. He signed new techniques and equipment photograph the tiny insects as he went ong, and some of his scenes of the rocess of mosquito metamorphosis have ever before been shown in motion pic- res with this kind of quality.

The main problem involved shooting traclose with long extension tubes, but ith enough light for great depth of field ithout killing off his mosquito larvae and upae too fast from the heat.

After experimenting at length with robe and "cool" lights, Mr. Tiesler nally discovered that his best results ere obtained with hot (but with ex- llent color quality) lights, a great deal patience, lots of over-shooting and illful editing. It is first-class entomologi- l and cinematographic work.

Mr. Tiesler has become so fascinated th the subject that he now has a ten- tive project in the planning stage with utgers University to elaborate on the se-up intimate life of the mosquito as en briefly in *Modern Mosquito Control*, d make a full scientific report at greater ngth.

Feeling of motion, pervading individual frames, lends a sense of urgency to overall film message.

Animation points up the discarding of a competitor's product that had already been chosen . . .

Cool Look at Hottest News in Advertising

Effective Use of Businesspaper Advertising Dramatized in ABP's "Action by Plan"

With the snarl of a siren . . . the jump of jazz . . . a rip-rip of designs going into the discard.

With space ships serving as vehicles for down-to-earth statistics.

With verbal and visual good humor applied to a serious topic.

Thus are business decisions dramatized in *Action by Plan* . . . a slidefilm which demonstrates that truths don't need to sound like truisms or plain facts like platitudes.

Sponsored by Associated Business Publications . . . and produced by Henry Strauss & Company in cooperation with Media Promotion Organization (a division of Van Brunt & Co.) . . . *Action by Plan* gives a sharp edge to some new ideas about achieving and measuring advertising results. It does this both by freshness of viewpoint . . . and of presentation technique.

It's a Matter of *Individual* Reaction

For example, the effectiveness of businesspaper advertising in dollars-to-dollar return is generally familiar to most sales promotion executives. Thus, it's not enough merely to prove once again that 'X' thousands of influential people make 'X' billions of purchases because of what they read in the business press.

But if you also present the idea of measuring advertising effectiveness in terms of *individual* action decisions . . . taken by *individual* people . . . you create a *feeling* audience members can readily identify themselves with. And . . . you broaden understanding of the many different goals good business advertising can realistically hope to achieve.

In *Action by Plan*, this concept is documented through specific examples . . . a highway engineer who tore up the specifications for two bridges and had them completely redesigned; a city manager who asked for additional quotations on police cars; and similar decisions made on the basis of reading a business-paper ad.

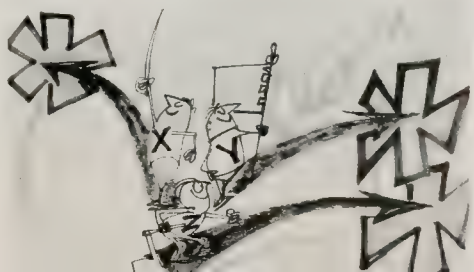
But before we're *told* these things, we *hear* them . . . in frames where sound effects replace narration. And we're made to *see* them . . . by artwork rendering that comes as close to creating a *feeling of motion* as is possible in the slidefilm medium.

Throughout *Action by Plan*, visualization is a major factor in clarifying new concepts. By using light backgrounds, contrasty colors, outline figures, and cumulatively-building sequences, a sense of action and urgency is created to subtly reenforce film's basic theme.

When the screen suddenly fills with products . . . where only one was visible a moment before . . . the idea of mass volume sales stimulated by an advertising campaign is made far more vivid than narration alone could do.

True and Tried, But Not *Trite*, Techniques

Novelty, however, is not allowed to run riot simply for its own sake. Many of the techniques in this sound slidefilm are true and tried . . . with variations to ensure they aren't trite. Example . . . several changes are rung on the familiar arrow-and-bullseye symbol for advertising hitting its mark.



Here, however, it illustrates not only the decision to buy . . . but the dozens of prior decisions to investigate, price, test and so on that lead to ultimate purchase. Keeping accent on the individual, the symbol appears always in conjunction with individual people . . . not simply with a shapeless "they".

Careful to avoid an overly solemn tone, *Action* combines satirical art with occasional bits of dead-pan narration. There are statistics and examples where relevant and necessary . . . not in a steady, brain-numbing shower.

That a planned campaign with specific goals will product measurable results is being said widely today . . . by the Association of National Advertisers, the National Industrial Conference Board, and others . . . as the film is careful to point out in referring its audience to supporting evidence.

But *saying* is more likely to mean believing when backed up by *seeing*. Overall, this film is a good example of its own implied message about business publications. To wit, the better an idea, the better showcasing it deserves.

Stylized arrows and bulls-eye symbols were treated with a purposeful lack of reverence . . .

THE INDUSTRY FILM JOURNAL

National News-Letter of the Industry Film Producers Association

THE THIRD ANNUAL I.F.P.A. Conference, being held on June 14, 15 and 16, offers a many-faceted program, winding up on Saturday evening, June 16th, with the 1962 Film Awards banquet in the International Ballroom at the plush Beverly Hilton Hotel!

Daily conference sessions on Friday and Saturday are being held on the campus of the University of California, Los Angeles. The auditorium of the Humanities Building is the scene of many presentations, including talks by the renowned British documentary producer Basil Wright; by Charles Eames, noted designer and producer; and by Joseph Kaplan, currently Chairman of the U.S. National Committee for the International Geophysical Year.

Dr. Irwin Moon, manager and founder of the Moody Science Institute, has just returned from a flying photographic trip to 43 countries where he shot 45,000 feet of color film. In addition to his talk, there will be *ideas* from Charles "Cap" Palmer, Executive Producer of Parthenon Pictures; from educational film maker, Josef Bohmer and from Kodak's advisor on non-theatrical films, John Flory. Mr. Flory has just returned from a world trip.

Other speakers on the program include Stuart Cooney, a specialist in design and use of presentations and communications systems; by Jack R. Smith, Supervisor, Motion Picture Services at Mitre Corporation; and by producer Bruce Herschensohn, maker of *Towers of Canaveral*, *Karma*, etc. North

Joseph Kaplan, Chairman of the U.S. National Committee for the International Geophysical Year.

SCENE OF CONFERENCE'S EVENING EVENTS

All evening events for the Third Annual Conference are being held at the beautiful Beverly Hilton where the awards banquet also takes place.

RTHERN CALIFORNIA

Attend First Meeting at ejo; Hear Talk by Kerr

he first regular meeting of the hern California chapter was at Terry's Restaurant in ejo, February 8th. Fifty mem- and guests attended the meet- at which new officers were ed. The 1962-63 officers are: irman, Mitchell S. Rose, jet-General Corp.; Secretary- surer, Ed Carroll, Southern ic; Program Chairman, Ray- d Jaeger, University of Cali- a Lawrence Radiation La- tory; and Member-at-Large, hatcher, United Airlines.

ilt Kerr, Creative Director, on Picture Division, Moulin os, San Francisco was guest ker. His subject was "The l Drawn Look in Animation." screened several examples of pean animated commercials, ll as the filmed storyboard he uced during the development animated film titled, *Smell of*

* * *

Stanford Film Production ities for April Meeting

he April meeting of the North- California Chapter consisted tour of film production facili- at Stanford University, con- d by Matt Lehmann. Refresh- s were provided by Cine- ne Laboratories, Palo Alto.

hree speakers also highlighted vening program. Dr. Nathan oby spoke on "The Motion re as a Tool in Behavorial ce Research." A review and ssion of student film work at ord was presented by Henry rose. Ernest Rose concluded program with a paper titled, "Film as an Instrument of Propaganda" which featured a screening of German World War II propaganda films.

SOUTHERN CALIFORNIA

Chapter Meets at Glen Glenn; Sid Solow Talks on Color

☆ Members of the Southern California chapter gathered at Glen Glen Sound Company facilities for their April meeting. Sidney Solow presented clips from the new Eastman Color Negative (7251) and described methods for arriving at color projection prints from this new stock.

Joseph Bluth and Dick Peck arranged a demonstration of a color television camera chain with video tape playback, part of the equipment featured in the self-contained video tape crusiers operated by Glenn-Armistead Co.

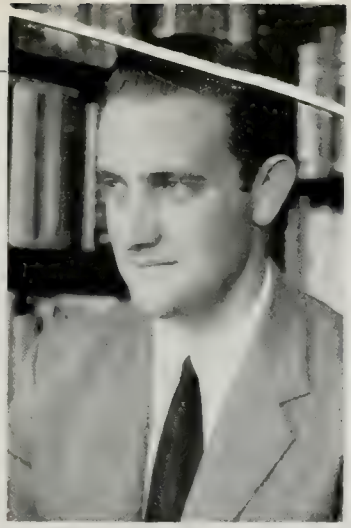
Also, *Ersatz*, an Academy-Award nomination cartoon was screened.

* * *

See Herschensohn's New Film

☆ The Southern California chapter held its March meeting at Birns and Sawyer in Hollywood. Featured speaker of the evening was Bruce Herschensohn who presented his recently completed documentary on India, *Karma*. Herchensohn described his production problems and personal experiences on this assignment. Frank Chow, Director of Photographic Operations for the International Communications Foundation which sponsored the film, told of the purpose of the film and its intended audiences.

As an added attraction, the new Sylvania Professional Sun Gun was demonstrated for the chapter.



e Mitre Corp.'s Film Services people. L to r: Jack Smith, Supervisor; Arthur Thiesen, ESD Pictorial Services Officer; Eugene Knight, writer; DeMello, editor; Paul Snyder, writer-director; George Blackington, raman; Louise Dyer, Claudia Sobczak, office staffers.

☆

Dr. Raymond Fielding, National President of the Industry Film Producers Association

☆

A Progress Report to the Membership

With this issue of BUSINESS SCREEN we begin a new publications association designed to better serve the needs of our growing I.F.P.A. membership. Henceforth, each issue of BUSINESS SCREEN will include an I.F.P.A. section presenting both feature articles and news items of interest to association members. This new section, together with the already widely acclaimed general business-film coverage of the magazine, will provide I.F.P.A. members with the finest and most complete coverage available of production activity throughout the entire industrial film field.

More than six years have passed since a handful of Southern California in-plant film makers first began assembling for monthly meetings at which mutual problems could be discussed and the state of the industrial film profession examined. From these early meetings came the conviction that some sort of permanent national organization was needed to serve the distinct needs of in-plant producers — those professional film makers employed by corporations whose end products were not motion pictures but which have come to depend increasingly upon film as a solution to their complex internal and external communication problems.

In 1957 the Industry Film Producers Association was founded, designed as an educational force, a professional forum, and a channel of communication of American in-plant film makers. Since then the occupational specializations and the geographical areas served by the association have grown as rapidly as its membership.

Today, five regional chapters serve the needs of the association's 400 widely-scattered members — in Southern California, Northern California, Florida, Georgia, and in the Delaware Valley states, and new chapters are being organized regularly to serve members-at-large in other parts of the country.

The Industry Film Producers Association, a non-profit corporation, welcomes applications for Active, Associate, and Sustaining memberships from individuals and commercial organizations with a professional interest in the improvement of the industrial motion picture and its applications in American business and industry.

We look forward to greeting both old and new members at our forthcoming 3rd Annual Conference, the one occasion of the year on which members from all I.F.P.A. chapters come together to appraise the state of the profession, to honor the award-winning industrial film productions of the past year, and to hazard a glance at the shape of in-plant film production to come.

NEWS OF CHAPTER ACTIVITIES

DELAWARE VALLEY

Peyton Stallings is Chairman Following Election at Camden

☆ On April 6th, at Camden, New Jersey's Walt Whitman Hotel, officers were elected. They are: Peyton M. Stallings, Chairman; Ralph Savarese, Secretary-Treasurer; and

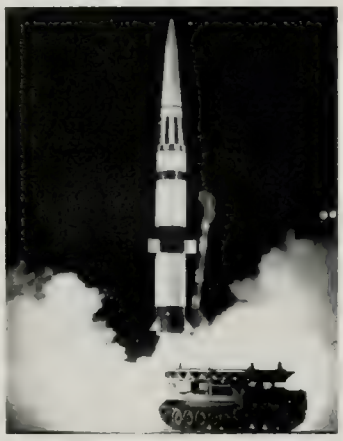
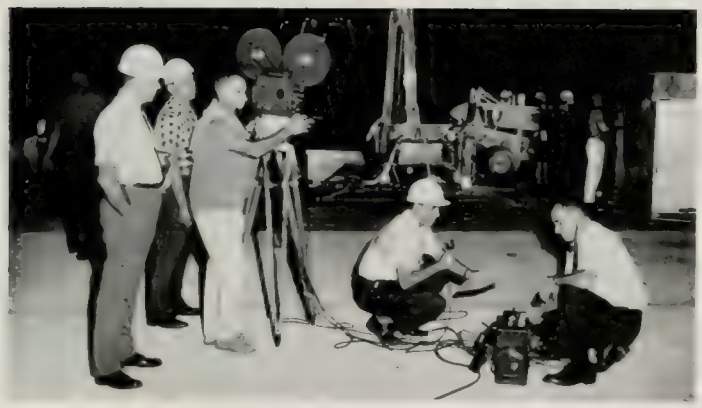
How to Join Delaware Chapter



☆ The Delaware Valley Chapter has been organized to serve industry producers in Pennsylvania, New York, Southern New Jersey, and Maryland. Interested parties should contact the Secretary, Delaware Valley Chapter, P.O. Box 498, Camden, New Jersey.

SOUTHEAST CHAPTER



Kovljain Elected to Lead the Chapter During Patrick Meeting

☆ David Kovljain was elected Chapter Chairman at a January meeting of the Southeastern Chapter. Also selected as officers at the meeting held at Patrick Air Force Base Officer's Club were: A. Smith, secretary-treasurer; and Allan Bransford, program chairman.

Guests attending the meeting were W. Hering, NATIONAL GEOGRAPHIC; Messrs. Flynn and Turbor of Addressograph-Multigraph Corp.; and R. P. Murkshe, R.C.A.

RCA crew at Atlantic Missile Range, films launch of Pershing missile for "Quick-Look" report. L to r: Sam Calloway, ABMA rep.; John Valtenberg, Arnold Cain, Joe Ficarotta, of RCA; and Dewey Smith, of the Martin Co.

Here's William Brose, writer-director at North American Aviation, who will be a featured speaker at the Third Conference.

Profiles of IFPA Chapter Presidents

☆ David Kovljain is the newly-elected chairman of the Southeastern Chapter of the Industry Film Producers Association located at the Atlantic Missile Range, Patrick AFB, Florida. A native of Pittsburgh, Pa., and a graduate of the Art Institute of that city, Kovljain served with the U. S. Navy as a photographic specialist assigned to public information and

David Kovljain

documentary coverage of World War II in the Atlantic and European areas.

After the war, he established his profession as an artist-photographer in Pittsburg and Detroit, serving public relations and promotional firms in each city.

In 1954, Kovljain joined RCA's Missile Test Project at the Atlantic Missile Range, first serving as a photographic specialist during the time RCA was organizing its range photography unit. Shortly after, he was named chief cameraman and within one year he was promoted to motion picture director assigned to the nation's first space probe effort and public information projects. Early in 1959, Kovljain became Manager, Photographic Operations, RCA Range Photography where he now supervises the production of all training and briefing films produced at RAC MTP as well as all photographic documentary and engineering coverage of missile tests and space activities at Canaveral.

Mitchell S. Rose

☆ IFPA's newest chapter Northern California group, h cently elected Mitchell S. chairman. A member of since 1959, Rose has been i mental in the formation o chapter. He is senior writer- tor for the Solid Rocket Pl Aerojet-General Corp., Sacr to. He is responsible for the tive aspects of all Solid R Plant productions, in additi his own writing and directi fects.

A graduate of the Univer y California at Los Angeles h he received a BA degree in tion Pictures, Rose has w as a motion picture and sion publicist until called to duty with the Air Force.

Rose joined Aerojet-G Corp. as a writer-direct March, 1958 and was pro to his present position in 1961.

Annual IFPA Film Awar Be Featured Here Next Y

☆ Winners of the IFPA " statuette and of the annu Gordon Memorial awar nounced at the Third Con will be reviewed in detail i pages next month. A feat your IFPA section in BU SCREEN.

"Using 8 Kodak Pageant Sound Projectors, we're showing the Civil War in-the-round"

Mr. James J. Geary, Executive Director, Virginia Civil War Commission.

Virginia Civil War Centennial Center, in mond, is a round building *designed around a e.*

he entire balcony of the building is devoted e showing of an eight-part $70,000 movie *Manassas to Appomattox*. The film is divided our-minute sections, each complete within it- but related to the other parts. The movies are n on rear-projection screens from a central ction booth just under the dome of the build-

s one motion picture segment ends, the audi- moves on to the next screen, just as the next begins. The result is a continuous flow of rs, progressing smoothly around the balcony. nstairs, they see a $100,000 exhibit which includes lifelike mannequins, animated maps, dioramas, and a display of Civil War relics on loan from museums.

"One of the big problems involved in making our Centennial Center work was, of course, the projection setup. This movie is to have a *four-year* run with continuous showings every day of the week, so the equipment had to be the most dependable available. The latest model KODAK PAGEANT Sound Projectors, with transistorized sound systems, were installed, and are doing the job wonderfully.

"We plan regular preventive maintenance for the projectors, but expect little trouble, because of the small number of moving parts in these new Kodak models."

While your company or school probably does not run its projectors as long or as hard as the Virginia Civil War Centennial Center, the new KODAK PAGEANT Sound Projector AV-126-TR offers advantages to you, too.

The all-transistorized amplifier is maintenance-free, ready to go the instant you turn it on. There is no distracting background noise. While easily capable for auditorium use, the entire range of sounds is crisply reproduced at small-room levels, too. The projector is so simple to operate the inexperienced can do it with little practice.

Your Kodak Audio-Visual Dealer will demonstrate this new Kodak projector for you, or you can write us for Bulletin V3-65, which gives more details.

KODAK PAGEANT Projector **EASTMAN KODAK COMPANY,** Dept. 8-V, Rochester 4, N. Y.

VIEWPOINT

"Where Are All the Young Men Gone?"

a lament by film-maker Lee R. Bobker

IN THE BRIGHT, SUNNY world of tomorrow that beckoned the young after World War II, the exciting growth of the documentary and business film loomed as an attractive, important factor.

College graduates from all parts of the country, seeking a career in the arts, found a world of fascinating interest . . . The art of the motion picture, as applied to the world in which we live.

Those interested in sociology. . . politics . . . and the dynamics of a world in ferment could apply themselves to the film document as it was then practiced by Stoney, Van Dyck, Flaherty, et al.

The Future Looked Bright

Those fascinated by a burgeoning technology . . . a nation and a world of science and automation . . . could find in the business film an attractive stage on which to practice their art and the future of the film industry and individuals interested in it, looked bright indeed.

In the 1940's, scores of young men (and women) with a deep conviction about film forsook the glamour of Hollywood . . . the immediate financial reward of television, and chose, as their life's work, the business film . . . the documentary film.

This golden era of the 40's resulted in distinguished films and in giving the entire field a constant supply of vitality so that each year a built-in drive from new men keeping those in the field "on their toes."

There Were Works of Art

In 1948-1949, it seemed a very exciting place for a young film-maker to be. The field was losing its "amateur" status. Major works of art had been produced by major film-makers in American industry and anyone working in the field could hold his head high when he said "I made non-theatrical films" (a strangely negative term, by the way, to categorize a life's work).

Then, from this most promising infancy . . . growing pains set in. An unfortunate kind of in-group protectivism, so c o m m o n to American industry, developed.

The Veneer and the Polish

The small "gem" of a company became, by dint of its very excellence, overwhelmingly popular, and empires were built. New York, traditionally the home of the location film (because there were few stages), became the scene of frantic "big business" activity . . . stages . . . equipment.

The same growing involvement with "prettiness," "technique" and "lushness" that had almost destroyed the major entertainment studios as filmmakers, now moved into New York.

TV commercials became a major source of income and employment and the sponsored film began to look like one long commercial. Beautiful . . . well photographed . . . original music . . . etc. but no content and — the young men with talent, creativity, ideas, began to look elsewhere for their life's work.

The Maker as a Middleman

The film-makers lost control of their product and, although there were exceptions, much of the work of making films was turned over to agency representatives with the film-maker acting as a middleman between client and employee.

In Hollywood, the independent film-maker began to produce features of character *and* box-office . . . the stranglehold of the majors on the film industry weakened and finally let go altogether. Television entered the documentary field with a vengeance under the whips of scandal and a new brilliant FCC administrator and, once again, the business film, the sponsored documentary, began to look like a pretty sad place to spend one's life.

No Pressure from Below . . .

The young men of the 40's were still around making some pretty good films but the pressure from below was gone. A simply *good* sponsored film looked like a masterpiece and the average young man coming into the field was either a refugee from failure to work features and television and would go back at the first opportunity, or he was, as one of my students recently put it, a man who knew "there must be some place for mediocrity."

The deep conviction that a *great* film can be made for a large business concern was gone. In its place was a platitude: that there is no place for art in the sponsored film.

"Your client will ruin it."

"XYZ company doesn't want a great film."

"You can't sell 'wommels' and make a great picture at the same time."

Two Types of Film Makers

This, in turn, led to the split between two types of film-makers: Those who decided "to give the client what he wants" and those who decided to take the client's money and do what he, the film-maker wants.

In either case, the attraction for the "top of the class' was gone and with it, the constant infusion of new ideas . . . new techniques . . . new film that had served American industry so well.

Myths have grown up:

"You can't get into the field . . . the unions won't let you."

"Nobody wants artistic films in this field."

"It's too tough."

"It's dull . . . who wants to sell cars with film," etc.

And yet, in fact, nothing could be further from the truth.

Today, in the world of the New Frontier, there is no field more promising . . . more exciting . . . more filled with the richness of achievement than the spons business-documentary-educat non-theatrical film field.

There is no such area in a creative arts that affords a y man or woman a place to pr their talent. There is no bus so full of intellectual interest, tional interest, and no typ career endeavor so in nee young people of talent . . . so mising in opportunity. There greater chance for a lifetim continuing education for th tellectually curious.

Look at the facts. The e tional film is growing at an u cedented rate . . . being us explain and interpret every of our complex lives. The A can business corporation, image-conscious than ever, desirous of practicing its corp citizenship, seeks new and exciting ways of using film.

Business Wants *Real* Fil

Contrary to cynical com no one in this nation is ready to give a film-mak chance to practice his art tha business corporation.

It was Alcoa that made *and Texture in Aluminum ishes*, a classic film; Smith and French that sponsored *chiatric Nursing*, an Aca Award nominee; Hamilton that commissioned *Ages of* etc. The business firm is willi put up large amounts of mor let you make film . . . if good and if your talent can duce something of value. Rembrandt would have en such a climate.

A World Full of Challen

The emergence of our as a socially conscious one h to the health service agencie the human affairs groups w ford the film-maker an world in which to make film

The full range of huma perience is offered on a silve ter. He can make films fo vision. He can practice his the whole field of human rel exploring race problems, tional problems, problems aged and, if he really has the use of political films him of a frantic but thrilli weeks-long election year.

His companions in this journey are the great and th great . . . the leading figure intellectual, financial, hum . . . of our time. Every m enriches his life and his expe so that his ability to make grows.

He can serve a business co

A Word About the Author of This Piece

☆ The writer, Lee R. Bobker, is president of Vision Associates, company formed in 1959 by four young film-makers: Mr. Bobker, Helen R. Kristt, Irving L. Oshman and Seymour J. Weissman. Vision is now in its third year of operation and has compiled an enviable record of distinctive films. At the time of formation, all of Vision's principals were under 35 years of age.

Where Are All the Young Men Gone?

(CONTINUED FROM PAGE 48)

better because he understands more. He has no limitation on his area of interest.

And to explode the other myth: No union ever prevented a young man from plying his art and his craft in the field and the desire on the part of your client is only that you make the best film possible.

So, where have all the young men (and women) gone? To that sinister 21-inch screen or to the peace and warmth of the Pacific?

If he has, he may have made a mistake. There's quite a field right here for young men (and women) of talent and desire. In fact, I know of nothing to equal it.

Meaningful Projects Underway

In every corner of our city, the large companies and the small, the big stages and the individual film-maker, exciting things are happening.

Richard Leacock has just returned from India and Leo Selzer is going. Ritter and Lerner of MPO have turned out a beauty on hospital insurance called *Dialogue with Life*. Nat Campus is involved with a study of Arthritis and Rheumatism, and Henry Strauss continues to explore deeply the problems and solutions of the large corporation. George Stoney, in this past year, has examined the problems of police care of the mentally ill, and Equitable Life has asked Saudek to make a film on the President's program for physical fitness.

The Nation Is Our Stage . . .

This writer will, in the coming years, learn about tuberculosis, the kindergarten, the American Negro, and how a great American airline reflects its national heritage. We have also explored our country with the Girl Scout program and may soon transmit onto screen the heritage of freedom that has resulted from our schools and education system.

There's no end . . . and no beginning. There are plenty of films to make and a big exciting wide world in which to make them. All we need are young men and women of talent! There's plenty of room and without them our field of artistic endeavor cannot . . . will not . . . survive.

EDITOR'S NOTE: Reader comment on Mr. Bobker's interesting thesis is invited. The forum is yours!

Pictured (left to right) are principals of Educational Media Index project. Godfrey Elliott, McGraw-Hill Book Research Director; Carolyn I. Whitenack, Directory Committee Chairman; Dr. J. Edwin Foster, Exec. Director; and Dr. Charles Schuller, Chairman, Educational Media Council.

New Educational Media Index Will Replace Wilson Guide

☆ The first comprehensive directory of non-book instructional materials, the *Educational Media Index* is being compiled for the Educational Media Council by the Technical Writing Service Division of the McGraw-Hill Book Company. This joint announcement was made by Edward E. Booher, president of McGraw-Hill and Dr. Charles F. Schuller, of Michigan State University and chairman of the Educational Media Council.

Coinciding with this announcement, the H. W. Wilson Company, publishers of the *Educational Film Guide* and the *Filmstrip Guide* announce that they will cease publication of the two guides with the 1962 supplement to each. They will turn over all files, subscription lists, and information on films and filmstrips to the Educational Media Council.

In making these materials available, the Wilson Company believes that the new *Educational Media Index* will adequately serve the needs of those who have used the Wilson guides in the past. Producers and distributors of educational films and filmstrips should send information concerning them to the Educational Media Index rather than to the H. W. Wilson Company effective immediately.

The Educational Media Council is an incorporated non-profit association formed to coordinate the activities of professional, business and governmental organizations that are primarily concerned with educational media. They have studied the problems of the use of the multi-media approach to learning and designed a national cataloging service as a primary source of information. The project is being financed by a U. S. Office of Education contract using the funds under Title VII of the National Defense Education Act.

A much-needed resource in the educational and training fields, as indicated by recent studies financed by the U. S. Office of ...cation, the *Educational Medi... dex* will total more than ... pages.

Scheduled for publicati... early 1963, it will cover the ... range of non-book education... dia — wall charts and ma... series, films and kinescopes, ... strips, phonodiscs, and p... tapes, videotapes, flat pic... slides in sets, models and ... ups, programmed instructio... terials, and cross-media kits ... bining many different types ... dia.

McGraw-Hill's Technical ... ing Service Division will ass... and prepare the material f... index under the editorial ... vision of a committee of the ... cil. It is anticipated that ... thirty to fifty thousand dif... educational items will be inc... For each item, the index will ... data of interest to educator... training directors, includi... brief description of content ... chase price, year of release, ... level, address of producer or ... distributor.

"POLAROID" AND "POLALINE"

$1.50
24 Hours
Film Processor

55¢
90 Seconds
Yourself
(with a Polaroid Land Camera)

To make your own black-and-white slides — quickly and economically — here's all you have to do: snap a picture with a Polaroid Land Camera loaded with special transparency film. Then pull a tab, wait a moment and open the rear of the camera.

There's your transparency.

After a quick hardening and mounting in a snap-together frame, the slide is ready to be dropped into a projector. Total time: about 90 seconds. Total cost: about ⅓ the price of the average black-and-white slide.

A new type of transparency film, PolaLine film, is now available. It's been designed especially for line-copy slides and it produces crisp, black lines and clear, transparent backgrounds. These are 3¼ x 4 transparencies for standard lantern slide projectors.

There are also continuous tone films for both standard lantern slide projectors and for use in a complete Polaroid Land system that employs 2¼ x 2¼ slides in a Polaroid projector. (Development time for continuous-tone slides is two minutes.) All three projection film types can be used in any Polaroid Land Camera that uses 40-series films (except the J-66).

Sound good? It is. There's no better way to make transparencies. Send in the coupon for more information.

A Positive Approach Toward Safe Driving

Sam Orleans' "The Sixth Wheel" Aims to Cut Accident Toll

Actress Peggy Smith; technical consultant (Trooper Bob Collins) chat with film's producer, Sam Orleans.

Here is a safety film that doesn't even scratch a fender or dent a bumper! A recent Award of Merit winner among the 19th Annual Safety Films Awards, *The Sixth Wheel,* takes a new positive approach to the problem of persuading drivers to accept their responsibility for safe driving.

Produced and sponsored by Sam Orleans Film Productions, Knoxville, Tennessee, this new approach is the result of research conducted by that organization with the help of the Automotive Safety Foundation who served as technical consultants on the film. The research showed that audiences dislike the doom-threatening tone of the usual safety film and tend to shrug off the points made as applying only to "the other fellow."

Typical Days of Three Drivers

Omitting tire-squealing head-on collisions and violent accidents, the film, in a quiet, low-keyed factual manner follows three drivers, a salesman, a housewife and a teenage boy through their day of driving. We observe their driving strengths and weaknesses, their triumphs and near-misses behind the wheel, until each car is safely parked for the night.

The Sixth Wheel points out that "every automobile has six wheels: four have tires on them, the fifth is for steering, and the sixth is the biggest wheel of all — the driver!" The "sixth wheels" in the three cases shown make mistakes often, through absent-mindedness, fatigue, haste or just plain carelessness. But their reflexes are fast and they are all very good drivers, so every narrow escape still manages to avoid an accident.

Each Faces Different Problems

Each character is involved in a separate situation. The smooth transition from scene to scene finds the drivers progressing through their day's driving activities. The housewife must drop the children at the schoolbus corner, stop at the bank, do the marketing and then later, pick up her husband at the station. She is careful to have the car checked at the service station and always drives at safe speeds. But she is guilty of daydreaming behind the wheel and has a near-miss.

The salesman must make several stops in nearby towns. He encounters many driving situations, from expressway driving to driving on back roads in the country. He has had seat belts installed, is mindful of posted speed limits, but becomes irritated over the loss of a sale and it shows in his manner of driving. He also experiences fatigue on the expressway, but, playing it safe, pulls into a rest area and has coffee and a change of scenery before continuing his trip.

The teenage boy is to pick up his girlfriend and another couple to attend the big game in a neighboring town. He too is a safe driver and very proud that he knows what makes his car run. When joined by his friends though he has less time and attention to spend on driving.

Viewers Profit by Their Errors

The narration from time to time adds hints of how to avoid some of the difficulties the characters occasionally find themselves in, and less frequently points out an error in judgment or foresight that is "gotten away with."

Everything that happens is likely to happen to any driver on any street or highway, and most of these things do happen frequently. When each car is parked safely for the night, we breathe a sigh of relief that we have witnessed only near-misses. We have seen how simply even these could have been avoided with just a little thought, a little more care.

Director Lawrence Mollot pr for close-up shot through a shield for "Sixth Wheel" scen

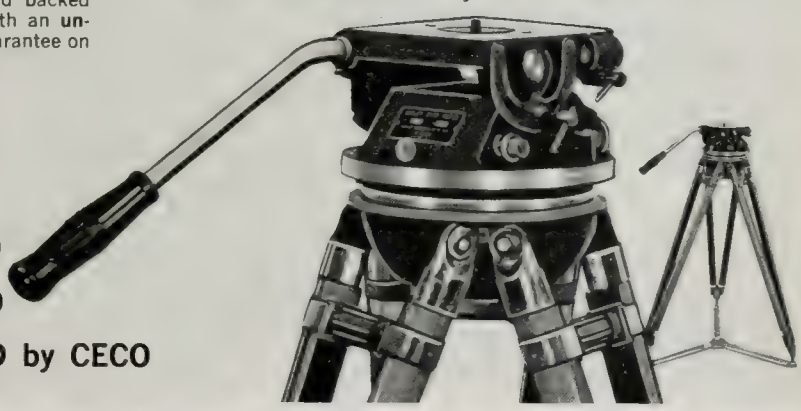
CECO'S NEWEST 25th ANNIVERSARY VALUE! AKELEY $1095. UNIVERSAL GYRO TRIPOD



$950. only until July 1

For television, newsreel work, and demanding assignments of all types, the AKELEY GYRO has long been the ultimate tripod throughout the motion-picture and TV industries.

Its gyroscopic stabilization is "steady as Gibraltar" under even the most extreme conditions of shock and vibration. Three different pan speeds, pan and tilt locks, quick-release mechanisms, friction-less ball-bearing construction and instant-leveling features make it easy to "lock onto" rapidly moving subjects regardless of their speed and direction of movement. On location or in the studio, the Akeley Gyro is a "must" at its regular price of $1095. At $950, it's simply unprecedented! Built and backed by CECO — and sold with an **unconditional** six-month guarantee on parts, labor and service!

Now...Two Great, Historic Names Join Hands!

AKELEY/CECO

MADE by CECO
SERVICED by CECO
DISTRIBUTED by CECO

FOR MORE than a generation, the name "Akeley" has symbolized the ultimate in advanced design and superb craftsmanship to the motion-picture industry . . . . And, for more than a generation, the name CECO – trademark of Camera Equipment Co., Inc. – has symbolized reliability, know-how, and – above all – **value.** Today, CECO has inherited and owns the proud reputation of the Akeley name — exclusively. CECO is the exclusive manufacturer. CECO is the exclusive distributor. And CECO is the exclusive official repair agency for anything that bears the Akeley name — past or present, new or old!

American Oil Dealer Film Provides Tips on Station Profits

☆ Principles of sound business management have been especially emphasized in a new motion picture for showing by the American Oil Company to its dealers. The picture is part of that company's continuing effort to supply dealers with information for profitable operation of the stations.

To Your Health, produced by Wilding, Inc., points out to the dealers that the service station business should and can be a *good* business. It offers the highest return on invested capital of any small retail operation. Yet *some* dealers fail because they are not aware of (or overlook) the basic common sense rules of good business management.

The 36-minute film uses filmed case histories and animation to illustrate how a dealer can determine his sales needs and objectives in order to meet his basic expenses and return a profit on his operation. It urges the dealer to recognize that his station has two aspects: personality and station health.

"Personality" is defined as being the impression the dealer, his assistants and his station make upon his customers; "Station Health" means the financial soundness of the operation. Both are equally important, the relationship between them being solely the responsibility of the dealer.

A. V. Fraser, manager of marketing development for American Oil, says: "We do not expect *To Your Health* to solve all dealer problems, but we hope that it will help define those problems which dealers are unaware of, and help steer them in the right direction."

Standard Oil Puts a Smile in 3 Dealer-Training Films

☆ Standard Oil of California has decided to put a smile in their dealer-training films. Desiring a *new kind* of dealer information and training activity they have called on John Wolfe & Company, San Francisco, to produce them.

Three 15-minute, color films were produced for Standard Oil with the contention that films of this nature can be entertaining as well as educational. Pointing out problems which are encountered by dealers, these films are humorous and light, and yet informative.

Open Your Eyes to Profit is concerned with night operation of a service station; *Make Incentive Pay* explains the company's profit-sharing plans; and, *There's No Business Like More Business* shows dealers how to improve their operation through neighborhood solicitation.

Canadian Film Shows Career Opportunities in Mining Field

☆ Any student not sure of his future career, but prepared to spend four years in a university preparing for it, is likely to be interested in a new documentary film outlining the broad career opportunities for professionally trained people in the field of mining.

Nation Builders, recently released after four years of preparation and discussion, represents a high point in Canadian inter-government cooperation. The 30-minute, color film was sponsored jointly by the Canadian Department of Mines and Technical Surveys, the Ontario Department of Mines and mining departments of eight other provinces.

The film shows a young engineering student from his first day at a university through graduation to a responsible position on a mine staff. He and his classmates are shown at a variety of summer jobs provided by mining and drilling companies and by government departments to give the students practical experience required to supplement the theory derived from the university course.

An estimated 13,000 miles were covered by camera crews in providing diversity of scenic [illegible] which range all the way fr[om] headframe amid the snow-c[apped] rockies to drilling for gas [in] the waters of Lake Erie.

Nation Builders was pro[duced] by Jack Chisholm Film P[ro]tions, Ltd., Toronto. Prin[ts] available for free showings th[rough] the Ontario Department of [Mines] in Toronto.

A Challenging New Look at Automation

A CHALLENGING NEW FILM on the role of the church in ng the way toward the solu- of social problems has been sed by the United Church of st, one of the nation's major minations which was organiz- st year through a union of the gregational Christian Churches the Evangelical and Reformed rch.

he film, *Tomorrow*?, 28½ b/w, was produced for the mination's Council for Chris- Social Action by Quest Pro- ions, New York, and deals the effects of automation. The us aspects of the problem are ented without offering solu- or any single religious an- to it.

Dr. Ray Gibbons, United Church of Christ (l) with producer Bill Jersey.

oes to Heart of the Problem

goes directly to the heart of problem — machines *are* put- people out of work. Then, s of management, organized r, individual employees, re- ts leaders and others are jux- ed to set forth the ethics and ms challenged by this impend- evolution in industrial prac-

hurch leaders believe it to be irst effort of a church group ndertake this type of presenta- of a social problem to stimu- discussion and help find a ion. The United Church, h has traditionally concerned with "good works," believes s an obligation to relate close- everyday life and to invest in the total community.

ailable for Purchase, Rental

omorrow? will be shown be- civic groups, industrial organi- ns, unions, women's clubs, li- es, employees in factories and rsities, as well as churches. available for sale at $160 or ent at $8 from the Office of munications, The United Church of Christ, 289 Park Avenue South, New York.

A study manual accompanies the film and points out, as do those who discuss the subject in the film, that automation is essential if the United States is to maintain its position in the world, but that present workers must keep their em ployment or be trained for new jobs and that jobs for future generations must be considered.

Tomorrow? was directed by William C. Jersey, who has a great talent for bringing the conversations of ordinary people on a street corner, in an executive's office or union hiring hall, to the screen as if we were eavesdropping on them. This appears to be so natural and easy, but it is very hard to do.

It is this wonderfully natural effect — the believability of all the people who appear in the film which helps to make *Tomorrow*? one of the most important films of the year. Businessmen everywhere should *see* it — and *think* about it.

Pace Completes "Welcome Aboard" For Baskin-Robbins

☆ Pace Productions, of Los Angeles and New York City, has just completed *Welcome Aboard*, the first in a series of training films for Baskin-Robbins 31 Flavors.

The new film will be used in Baskin-Robbins 112 franchise operations throughout the country. It will help train new employees in techniques involved in efficient, attractive service and is slanted to acquaint workers with the company's background, philosophies and basic policies.

* * *

Requirements in Metalworking Pictured in DeVlieg Slidefilm

☆ The early history of the art of boring holes in metals, as well as the important requirements of today's metalworking industry are unfolded in an 18-minute 35mm color sound slidefilm produced by DeVlieg Machine Co., Royal Oak, Michigan.

Titled, *A Visit to Fair Street*, it shows how the Jigmil technique solves problems of accuracy and productivity in the field of precision boring and milling. The film also offers conclusive evidence of how accuracy is economy in production.

Available on request from the company or its distributors, the film should be of particular interest to engineers, manufacturing personnel and others who desire to become more familiar with the Jigmil technique of "jigless boring."

Study Group Issues Report On Educational TV Programs

☆ A report and recommendations of a special study group on educational television has been released by U. S. Commissioner of Education Sterling M. McMurrin. The report calls for the development of a national policy for the further development of educational television facilities, programming, and personnel.

Dr. McMurrin said steps would be taken immediately to carry out, on an exploratory basis, one of the recommendations. This calls for the establishment of national and regional exchange centers for educational television teaching materials. This and other projects and studies relating to educational television will be instituted under the educational media provisions of the National Defense Education Act.

Brief Reviews of Current Business Films

The Latest in Boys' Wear Pictured for Retailer Showings

THAT CLOTHES, the right clothes for each age and occasion, can and do contribute to a boy's sound emotional and social development is the theme of a new film that mothers of growing boys are now viewing at showings in department and boy's clothing stores across the country. *There Is Nothing Like a Boy*, 28 minutes, color, produced by Creative Visual Media, Inc., New York, makes the point that "clothes do make the young man."

The film says that people tend to live up to the clothes they wear. Boys are just as clothes conscious as their sisters and their parents. As with other members of the family, good manners and behavior go with the wearing of attractive, well-styled clothing.

To help mothers select, (or guide their sons in selecting,) the right clothes for different occasions, the latter part of *There Is Nothing Like a Boy* takes the form of a style show offering dramatic presentations of the major color and design trends in boys' wear for Summer, 1962. All types of boys' apparel are shown, including suits, slacks, sport coats, shirts, sweaters and swim wear.

Joint sponsors of the film are the Sanforized Division of Cluett, Peabody & Company, and the Boys' Apparel & Accessories Manufacturer's Association. Manufacturers of boys' wear representing all sections of the United States contributed their advance 1962 styles for the production.

Scenes were shot during August, 1961, at Greenburg, Pennsylvania, a city with a popul of close to 20,000 that is n for its year-round recreational grams centered on helping young people develop into res sible citizens. Local boys and provided the cast. The story follows the lives of boys fron to 17, pointing up the changes undergo while growing physic mentally and emotionally.

e Technique of Filming Medical Symposia

POSIA ON MANY medical subcts are regularly conducted e professional groups by leadpecialists under the auspices derle Laboratories. Notwithng that a great many of these psia take place across the ry, the demand for speakers ertain subjects has become eat that live speakers can only a small portion of the ngs requesting them.

h important new develop- in the treatment of mam- cancer to report, Lederle ow arranged to distribute a ete symposium on this sub- the form of a film report. nel of experts, under the anship of Dr. Joseph H. w, Attending Surgeon, Chief Service, Memorial and s Ewing Hospitals, New conducts the discussion, originally took place live, w York, at Memorial Hos-

duction by Willard Pictures

h supervision by William H. of Lederle Laboratories Di- of American Cyanamid any, the film was produced illard Pictures, New York, a unique four-camera techthat permitted the whole sium to be shot — in color one four-hour session. ducer John Squiers used one camera to function as a master with a fixed long shot of the whole panel, while three other cameras with zoom lenses ranged about picking up faces of the speakers of demonstrations given on the stage. Artwork slides were projected on a rear-view screen behind the panel to illustrate the case histories under discussion. All four cameras were "on" simultaneously during the whole four-hour session, with only brief time-outs for reloading and a breather for the cast.

Maintains Strong Visual Interest

Using this technique, it was possible to maintain visual interest throughout the complex discussions of the panelists. Lederle feels that its medical films for professional audiences must be not only medically accurate, but technically and aesthetically right as motion pictures, as well.

The film, *A Panel Discussion on the Management of Incurable Breast Cancer*, explores new methods of controlling the condition for longer periods than hitherto felt possible, and under far more comfortable conditions for the patient.

Recent Product Developments for Projection and Production

Bell & Howell Additive Printer

Bell & Howell Introduces Its New Additive Color Printers

☆ Color balance and quality of film will be greatly improved with the introduction of a new series of additive color motion picture printers by Bell & Howell.

The new machines, fully automated, are expected to have wide application in films for industry, medical science, education and other fields where accurate color reproduction in motion picture prints is important.

Available for any width film from 16mm to 70mm, these are the only printers capable of making extremely short scene-to-scene color corrections at high speed. Formerly an over-all balance was predetermined and the entire film printed to conform to this "average tone," often resulting in unacceptable color quality in scenes that had to be removed before distribution.

The B & H printers have more than doubled the range of color correction, with 72 variations in each of the three primary colors, compared to 31 variations in previous models. They are controlled by pre-punched, inch-wide program tape and print from a color negative, or color internegative, onto a color positive of the same film size at speeds up to 180 feet per minute.

A technician pre-programs the tape, inserts it into the printer and monitors the machine's voltmeter; all other operations are completely automatic. For complete specifications check NP Box ⇄1.

New Slide Projector Selects Any of 96 Slides Instantly

☆ A slide projector which instantly makes any one of 96 slides available for projection, is being offered by Spindler & Sauppe, Los Angeles.

Called the SLX-750 Random Access Selectroslide, this projector will accomodate 2" x 2" 35mm slides for all lenses from 1½" to 11", and Bantam or Super-slides (4 x 4cm), with lenses of 4" focal length or longer. Two magazines each holding 48 slides are interchangeable and need not be keyed when interchanged.

Magazines rotate in one direction only, and selection time is approximately 2½ seconds. Slides

SLX-750 Random Access Projector

from the two magazines can be directly compared by shifting from one magazine to the other with the use of "A-B" buttons.

Additional information may be obtained by checking NP Box ⇄2.

New 16mm Selecton Projector Features a Xenon Light Source

☆ Constant high light output and easy operation in permanent installations are features of a new Bauer 16mm Selecton projector. Equipped with a Xenon Lamphouse installation, the projector is made by the Eugen Bauer Co., Germany, and is available in the United States from Camera Equipment Co.

The use of the Xenon Lamphouse provides for over 1500 hours of continuous operation, permitting uninterrupted shows of any length. The lamp is instant starting and requires no maintenance or adjustment throughout its life.

An exclusive Bauer development called the "cold mirror", reflects only the light of the Xenon bulb and allows the heat to pass through it and out the back, thus extending film life. The light output of the Selecton Projector with 2000 watt Xenon Lamphouse is 4100 lumens measured at the screen. This is equal to a 75 Ampere Carbon Arc Lamp.

The projector is equipped with arms to accept 5000 foot reels permitting 2½ hours of uninterrupted showing. Length: 4' 6½", weight: approximately 264 lbs. For more information check N.P. Box ⇄3.

* * *

Rear-Projection "Movie Mover" for Use in Bright-Light Rooms

☆ Effective daylight room projection is now possible with an improved H. Wilson Corp. rear projection unit. The Movie-Mover RP works with any make 16mm projector and shows clear pictures in undarkened rooms.

5/8" lenses are used for 16mm projectors and 1½" lenses for popular makes of filmstrip projectors. A light shield with sliding top and hinged panels with magnetic locks fits snugly against projector lens and blocks ambient light from entering screen box. Additional information is available by checking NP Box ⇄4.

Cartridge-Loaded Projector Offered by Kalart/Victor

☆ A new line of Kalart/Victor Moviematic "Repeater" and Duolite projectors are being marketed by Kalart-Victor Animatograph Corp.

The Moviematic projectors are designed for showing 16mm film either on their own built-in screen

Moviematic Repeater/Projector

or a distant screen, without having to rewind or thread for each showing.

Film is loaded into a power-driven cartridge for projection, though some models permit entire cartridge to be removed for showing films on standard reels.

The Duolite model ST-18 has all the conventional conveniences plus a built-in screen for table-top use in lighted rooms. Check NP Box # 9 for additional information.

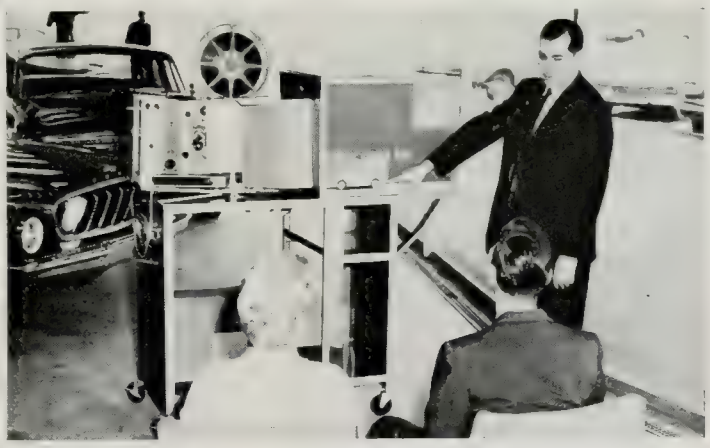
HFC Adds New Film Inspection Projectors for 16 & 35mm Use

☆ A high speed inspection projector (available in either 16 or 35mm) for use by film laboratories has been announced by Hollywood Film Company.

The 16mm machine runs at 144 feet per minute, four times normal speed. Two picture frames are viewed simultaneously together with the perforation and sound track areas.



The 35mm model runs at 165 feet per minute and can be speed-

MAKE YOUR AUDIO-VISUAL PROGRAM MORE EFFECTIVE

Thousands of business leaders have discovered the rear-projection concept effects substantial savings in time and money and makes their Audio-Visual program more effective. Sharp, clear images in full light permit audience note-taking . . . increase memory retention.

Employee training, sales presentations and other audio-visual programs are offered with no groping in the dark. Visuals may be shown wherever there's an electric outlet.

Another rear-screen projection benefit is that a minimum space is required . . . the cost of separate projection booth is eliminated. Because modern rear projection units are easily moved, practically any room becomes an audio-visual room. Cost of an excellent rear screen projection unit—equipped with Lenscreen by Polacoat — is less than the cost of darkening a single room! Lenscreen gives sharp, clear pictures in any lighted rooms.

For complete information mail this coupon today.

FILM: A TOOL FOR TRADE

(CONTINUED FROM PRECEDING PAGE TEN)

or 16mm size on their product, knowing at the outset that many of the firms in this mailing had no interest in exporting their commodities.*

Out of this mailing, we have received replies from 375 companies.

78 Companies Show Definite Interest

Seventy-eight companies, or over 20 percent of the total replies, indicated a definite interest in using this contemplated program, and many were very laudatory and complimentary in their replies for the initiation of such a useful program as a method of expanding their foreign trade. Many asked specific questions on cost of reducing their present films to 8mm magnetic sound, method of distribution, the workings of the Commercial Attaches, etc.

Of the 78 companies which are definitely interested in joining the program immediately, 60 had 306 films available (or an average of about five films, each) which they considered as worthwhile, and who, at their own expense, will sound stripe them in the languages of the markets they seek to expand their export trade. The other 18 companies had no suitable films, but were willing to have films produced so they could join this program and enter the export trade program.

34 Firms Are "Cautiously Interested"

In addition, there were 34 companies that were cautiously interested. They neither committed themselves one way or the other. About half of these firms had an average of about five films each. These companies either gave some reason for their hesitancy or commented voluntarily in such a way that their reason was easily discernable.

About 12 firms were hesitant in joining the program because of the unknown expense or cost involved; 11 said probably later, but not at present; six had their own already-established distributors overseas, and were not sure how our program would affect these operations; three indicated that their films were out of date and that they might be interested when these were brought up to date.

Some other reasons given were that their films were prepared for domestic use; others were too specialized or were out of date. Other firms felt that they might become interested in this program once it got underway.

Ideal Tool for Showing Heavy Equipment

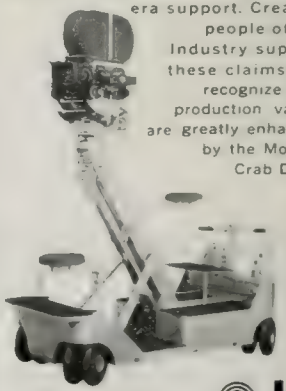
No better medium can be found than the motion picture for describing the operation of a new machine tool or a piece of heavy equipment, such as dirt moving and excavating machinery.

In 1957 a typical machine tool manufacturer, for example, would have to advance approximately $50.00 to provide a single U.S. Embassy or Consular office with a 10-minute print or 16mm sound and color film, describing his machine tool products in action.

Advances in color film technology, coupled with the new 8mm magnetic sound projector, are expected eventually to bring the cost of equivalent 8mm print to something in the neighborhood of $10.00.

When this price is reached, in the future, it is felt that many American firms anxious to stimulate their foreign sales, especially those products which would be cumbersome to be carried by a salesman too descriptive with flyers or literature, be in a position to provide quantity copies 8mm magnetic sound and color films of American products for use by our Embassies or projectors supplied under the President's export trade expansion program.

Well-made sound and color films in language of the prospective customer can help clinch a deal. American industry, as a whole, may find in this new development a novel use of movies to demonstrate, to persuade, to sell a powerful tool to help in the task of redressing the U.S. export trade balance.



New mailings are now being made to selected industry groups to further determine their interest in this program. Based upon preliminary samplings, the climate seems favorable for implementing the program in effect.

However, we feel that these further explorations are necessary before finalizing the program. Any American firm interested in increasing the export market and desiring more information regarding this contemplated program is invited to write to the Scientific, Photographic and Business Equipment Division of the Business and Defense Service Administration, U.S. Department of Commerce, Washington 25, D.C.

*Survey forms, still obtainable from the Department of Commerce, were reproduced in the January, 1962 issue of BUSINESS SCREEN (No. 8, Vol. 22).

EXPORTING IDEAS ON FILM:

(CONTINUED FROM PRECEDING PAGE EIGHT)

al film festivals and exhibitions often provide valuable showcases for the productions of business and industry — when they are of particular interest and merit and are imaginative and creative. The Committee on International Non-theatrical Events (CINE) is actively seeking the best available films to represent the United States in such major film festivals as Edinburgh, Venice, Berlin, Cannes, as well as a number of specialized film events around the world. Information is available from the Administrative Coordinator, CINE, 1201 16th Street, NW, Washington 6, D.C.

Trade Expansion Act Before Congress

How the circulation abroad of business and industry films relates to the United States foreign policy was the subject of a speech by the Honorable Roger Tubby (then Assistant Secretary of State for Public Affairs, and now Ambassador) before the Film Workshop of the Association of National Advertisers in New York on January 17, 1962:

"In his State of the Union Message, President Kennedy said, 'Above all, if we are to pay for our commitments abroad, we must expand our exports. Our businessmen must be export-conscious and export-competitive.' "The President further stated that he will shortly send to Congress a new five-year Trade Expansion Act to make it possible for our major industries to compete with their counterparts in Western Europe for access to European consumers. 'If we move decisively,' he said, 'our factories and farms can increase their sales to their richest, fastest-growing market.'

"A Significant Resource for Trade"

"I would urge everyone here to examine every opportunity for extending the use of business and industry motion pictures abroad. Certainly among the five thousand motion pictures annually produced by American business and industry there is a significant resource for assisting in carrying out the proposed new instrument of trade policy."

EDITOR'S NOTE: Our Thanks to Mr. Pearson for this informative article. Readers are urged to write to his department for specific data on films with overseas potentialities (see page eight) and to note the current proposals of the Department of Commerce.

THE EDITORIAL VIEWPOINT

WHAT'S AHEAD FOR AMERICA as the Sixties rush along? For one thing there had better be some *hard* thinking about the urgent need for new jobs, for essential profits for businessmen and for markets to support an expanding economy. Millions of babies born in the explosive years of post-World War II will start to reach maturity in 1966-67. There's a sure boom in the offing *if* those jobs are provided to pay for the homes these new families will need and for all their other wants.

Our total population in the U. S. will break the 200 million mark by mid-1960. We'll need those abundant food and fiber resources and a lot more to feed, cloth and house these new American families of the all-too-near future! And we'd better look to markets abroad as well as at home to build a strong economy that depends on jobs *and* profits.

* * *

Suddenly the World's Much Smaller as Telestar Flashes Across the Sky

☆ Closer ties abroad are apparent in each new issue of BUSINESS SCREEN. The sudden success of Telestar, AT&T's communications switchboard in outer space (see page 29) has united the continents for both "live" and filmed television interchange. Europe's Third International Industrial Film Festival in West Berlin this September further unites the many competing countries of the Common Market and the United States. We bring you news of entries from five lands on page 32! It's a *small world*, to take a leaf from Peter Rigg's column, and it's getting a lot smaller as the days move swiftly along. Suddenly the the streets of Paris are alive on your home tv screen . . . and the U. S. flag waves on screens in Paris and London as this tiny satellite begins writing history in the sky!

E. F. MacDonald Company, Wilding, Inc. Join in New Cooperative Arrangement

☆ There's important business news in the U. S. as a new working arrangement, offering a single source for merchandise and travel incentive programs, convention and sales meeting packages, films and other media, was announced by the E. F. MacDonald Company, worldwide incentive firm and Wilding, Inc.

In their joint statement, Elton F. MacDonald, board chairman of the Dayton, Ohio company and H. Williams Hanmer, president of Wilding, declared that both firms will continue to maintain their separate identities and organizations. The decision to enter this joint ventu it was noted, was made only after considera research had convinced managements of b firms that a need existed for a single source incentives and related communications med

Chick Hyman New President of Camera Mart as Hester Browning Announces Retirement

☆ With the retirement of its president, Hester V. Browning, widow of Irving Browning, founder of The Camera Mart, Inc., of New York City, new officers and members of the national photographic distribution company have been announced.

Samuel "Chick" Hyman is the new president of the 24-year old concern. Paul Meistrich has been named vice-president and Anna Browning is secretary-treasurer. All are veteran members of the firm. Chick Hyman has been general manager for 16 years; Paul Meistrich is a 13-year veteran and Mrs. Browning (widow of Sam Browning, co-founder) has been with the company the past six years.

Camera Mart principals (l to r): S. "Chick" Hyman, Anna Browning and Paul Meistrich.

The company specializes in sales, rental and repair of professional motion picture, television and photographic equipment as well as manufacturing motion picture accessories and custom-built gear under the familiar trade name, "Camart Products."

Freedom Award to New England Mutual for Motion Picture "Assignment America"

Honored by the Freedoms Foundation at a recent Boston ceremony was the New England Mutual Life Insurance Company which received a Freedoms Award for its motion picture, *Assignment America*.

Norman Knight, a director of the foundation, made the award last month to O. Kelly Anderson, president of New England Mutual at the company's home office in Boston. Bay State Film Productions was the producer of the award-winning film.

In production for nearly two years, *Assignment America* traces the investment dollars of the Company from Maine to California and from the St. Lawrence Seaway to the Gulf of Mexico. Francis W. Hatch, Jr., public relat[ions] director of New England Mutual, worked cl[osely] with the Bay State staff throughout the l[ong] production schedule. Now in its second [year] of release, the film also won a Chris Awar[d] at Columbus in '61. It is being distributed nat[ion]ally by Association Films.

Award ceremony (l to r): Norman Knight [director of Freedoms Foundation; O. Kelly] derson, President, New England Mutual; D[avid] Doyle, V.P., Bay State Film Productions.

Sixth Industrial Film & A-V Exhibition Opens in New York City September 25-27

☆ The sixth annual Industrial Film & A-V [Ex]hibition has been scheduled for September 25-27, in New York city where it will be held at the Barbizon-Plaza Hotel. Herbert Ro[senberg], intrepid spokesman for the event, also n[otes] that "once again we will combine our prog[ram] with the International Film Festival of [New] York and this event promises to the most [ex]tensive and exciting one in its history."

The Exhibition area, consisting of t[en] halls, will feature the latest equipment [and] production aids to new projectors. The [pro]gram will include workshop sessions, p[anel] discussions and film presentation. Among t[hese] will be a program report on 8mm sound [in]cluding showings of 8mm sound release p[rints]. "Successful Sound Slidefilms" will be pre[sent]ed to show how companies can profitably [in]tegrate this medium in sales and training. [The] Musical Commercial Producers Associ[ation] will hold a seminar on "Creative Intera[ction] of Sound and Sight."

According to Herb Rosen, the outstan[ding] feature on the program is the session, "Visu[al]izing an Idea," a panel discussion by ex[perts] from industry, community organizations and education. Case histories will present the social, psychological and technological points of [view] involved in transforming an idea into a [suc]

Top Films, New Sources Seen At Assembly

By HOWARD THOMPSON

WITH the recent close of the fourth annual American Film Festival and a big, fine package of prize-winners now available (upon request) as a national "road show," full credit should go to the sponsoring Educational Film Library Association at 250 West Fifty-seventh Street.

Again pilot of the entire operation, which drew a record total of 1,500 registrants to the Biltmore Hotel, was the association's administrative director, Emily Jones. Miss Jones is thought

(of Clearwater, Fla.).

And two tiny masterpieces came from Electra Films of New York, a company expanding from television films into the nontheatrical field. Electra's "Litho" recorded the technical process of lithography in a precise flow of simplicity and beauty; here was a perfect little picture of its kind. "Profits in the Bag" (how to pack a shopping container, no less), sparked by some brazenly sassy animation, was a model of perky practicality.

Other winners, to choose at random, fully justified their acclaim. The plight and rehabilitation of a disturbed adolescent girl was penetr

Equal Space to Screen Directors Guild for Answers to Our Editorial Questions

☆ In our preceding issue, this department raised some *questions* about recent Midwest organization efforts of the Screen Directors International Guild. We commended the parent organization for its obvious contributions to the industry but we also took the one viewpoint which is paramount in this magazine: how will present contractual moves of the Guild's midwest group help (a) its fully-qualified director-members and (b) how will they advance the production of better films?

We are promised answers to questions raised by our commentary by one of the Guild's founders, our good friend Jack Glenn of the New York chapter. That, we believe, is the responsibility of a fair-minded publication and we will make available to the Guild the editorial space required for those answers.

Meanwhile, we have *one* answer. We asked whether the president of the Midwest Guild organization was a screen director, noting his *excellent* qualifications as a *cameraman*. Directorial credits provided for Andy Costikyan (whom we did not name) are as follows: for Sears' Roebuck & Company, two films, *As Your Home Goes* and *Your Community;* for the Toni Company, a European film, *The International Set;* and for the Celotex Corporation, *Today's Homes; A Report.*

Yes, Andy is a director, according to the Guild's standards, and we're delighted to acknowledge his credits. We hope to learn more about the director-cameraman and to provide you, the sponsor, with the answers about the Guild's program in their forthcoming article.

"But you said we didn't need those future bookings of our new product picture when we got all those orders in March . . ."

N. Y. Conference on Programmed Instruction Opens Aug. 27

A SPECIAL CONFERENCE and exhibit on Programmed Instruction will be held August 27, 28, 29 at the Hotel Astor, New York, under the auspices of the American Management Association.

A 250 per cent increase in the practical applications of programmed learning during the past year has demonstrated how and where this revolutionary new method of training and instruction offers benefits to business, government and industry. The AMA conference is designed to be a broad gauge report on innovations and new developments in PI. It should be particularly useful to men concerned with audio-visuals and with communications work in industry.

Cost of Inadequate Training

Some of the reports to be presented include *Facts and Fallacies About Programmed Instruction in Industry*, *The Cost of Effective Training*, and *The Hidden Costs of Inadequate Training*. The premise here is that basic to the success of any education or training program are three factors: the isolation and crisp definition of specific problems and objectives; a knowledge of the costs and effectiveness of training and, importantly, an understanding of the costs of inadequate training.

This session will disclose new and significant facts relating to "hidden costs" of inadequate training and describe how overhead and operating costs can be reduced by recognizing and solving *hidden* training problems. It will suggest the criteria for the proper application of programmed instruction and other training tools for the right job.

How Companies Apply Techniques

Other items on the agenda will be *Results of Programmed Instruction in Training and Education*: *Training in Skills* (at General Telephone Company); *How Programming Teaches Basic Knowledge About Finance* (at Arthur Wiesenberger Company); *The Teaching of Manipulation and Clerical Skills* (at the Chase Manhattan Bank); and *The Teaching of Basic Knowledge to Life Insurance Agents* (by the Life Insurance Agents Management Association).

The Dynamics of Machines will show how an increasing num of programs rely upon teach machines and associated aud visual devices for their most fective presentation. Machi are *tools* which can assist s stantially in the "self-instructi element of programmed instr tion. This session will descr the many devices, suggest pro application, and case histories give evidence of practical use varied purposes.

In *A Look Ahead*, the Am can Management Association c ference will take up the future programmed instruction — promise, problems and work be done.

Sound Slidefilm Promotes a "Blockbuster" Feature as Paramount Shows Exhibitors How to Exploit "Hatari"

PARAMOUNT PICTURES, always one of the silver screen's most eminent names, made news last month by adopting an audio-visual presentation as a key segment of its promotion plans for *Hatari*, current African blockbuster starring John Wayne.

This unique (for the entertainment motion picture industry) tie-up has Paramount selling its big new picture to exhibitors with a 12-minute sound slidefilm in color, produced by Visualscope, Inc., from a script by Jack Moss.

Explains Advantages of Medium

Demonstrating the promotion recently in New York, Martin Davis, Paramount's director of advertising, publicity and exploitation, pointed out that the automatic slidefilm and projector used in the campaign were completely portable

Visualscope v. p. Ed Rasch at projector as Paramount's Martin Davis (center) watches presentation.

and the film's message entirely self-explanatory, thus it can be quickly set up in any exhibitor's office.

150 DuKane dealers across the country are taking part in the campaign by standing ready to supply rental machines on a moment's notice from Paramount salesmen.

Four Phases of the Campaign

As for the 12-minute promotion presentation itself, it is divided into the four main categories of the *Hatari* campaign: advertising, publicity, promotion and the follow-through. The presentation begins by introducing the film's stars; then some of the production's main art work is shown while the narrator explains the picture's production background.

Hatari advertising will stress its acceptability to all members of the family, especially the youth market which was noted as representing 61 per cent of all box office receipts.

A major point is the picture's tie-up with Willys Motors, whose Jeep is used extensively throughout the film. Willys is spending $1,000,000 on TV commercials, dealer and consumer ads, mailings and special displays all featuring *Hatari*.

National Medical Audiovisual Facility Set Up in Atlanta

☆ A central audio-visual function has been established for the U. S. Public Health Service at its Communicable Disease Center in Atlanta, Georgia.

The new facility, designated the National Medical Audiovisual Facility, is housed in a modern building especially designed for audio-visual activities. It houses two stages, a sound recording and reproduction unit, graphic arts and exhibit units, a still photograph and reference and catalogue activity, and motion picture and still photograph processing laboratories.

The role of the facility will be in the development, production, acquisition, distribution and utilization of medical motion pictures and other audiovisual forms. It will also be responsible for maintenance of the National Medical Motion Picture Archives which have recently been transferred to the Atlanta site from the National Library of Medicine in Washington, D. C.

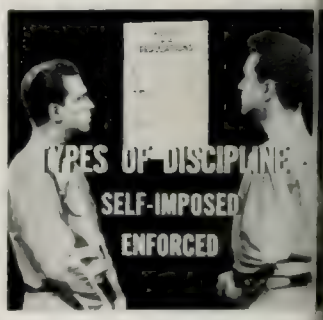
Houston-Hale, Inc., Acquires the Houston Color Film Labs.

☆ Houston-Hale, Inc., a new organization, has acquired Houston Color Film Laboratories, Burbank.



Board chairman Clark Hale

According to president and board chairman, Clark Hale, Houston Fearless, the former owners retain a controlling interest in the new company.

Albert White, operations vice-president, reports that the laboratory has had a 26% sales increase thus far in 1962. The laboratory processes all types of 16 and 35mm film, both color and black and white.

CAN REPRIMANDS IMPROVE DISCIPLINE?

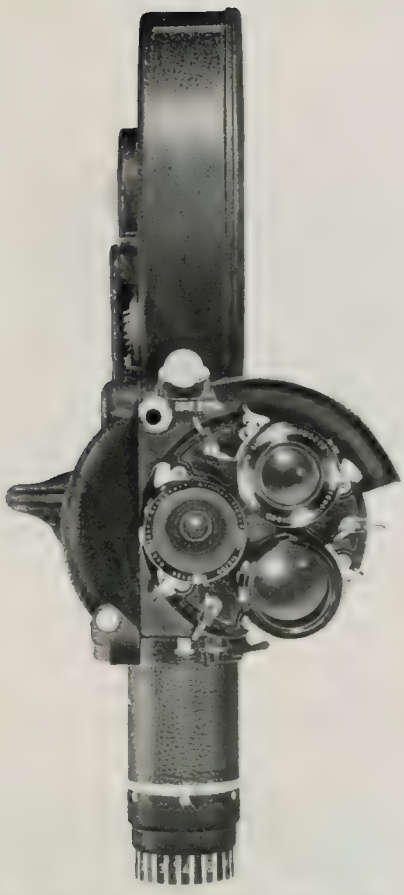
Slidefilm Gives Answer

One of the heaviest burdens of m[anage]ment is wise maintenance [of] discipline . . . while avoiding co[stly] turnover due to employee rese[nt]ment of supervisory methods. [The] slidefilm:

"MAINTAINING DISCIPLINE"

clearly defines the essential imp[or]tance of discipline. It trains sup[er]visors in the ability to handle [the] two distinct types: *Self-Imposed* [and] *Enforced*, with the proper technic[s] for use when reprimands are [un]avoidable. *The goal:* to build m[ore] efficient performance through [all] levels of organization. One o[f the] tested series of eight sound sl[ide]films:

"SUPERVISOR TRAINING IN HUMAN RELATIONS"



widely used by management in m[any] industries and service groups.

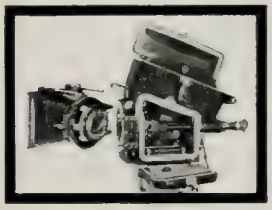
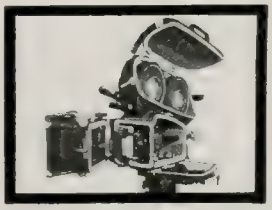
ARRIFLEX® 35



a classic in its own time!



This 35mm motion picture camera was literally born a classic. Not through appearance alone ... but through function and performance! The very first Arriflex 35s, built in 1938, gave filmmakers unprecedented versatility, operating ease, technical capabilities, and money-saving advantages... through a completely original optical system designed around a mirror-reflex shutter. One of the few genuine innovations in cine camera engineering since the days of Lumière, Friese-Greene, and Edison . . . the mirror-reflex shutter is today's most desired and most imitated motion picture camera feature. It provides continuous through-the-lens viewing while filming . . . eliminates parallax! And it all but antiquates an assortment of finder correcting gear most other cameras still require. Wherever film releases must meet the highest standards of theater-quality, Arriflex 35s are chosen. They're lightweight, so they make excellent newsreel and location cameras; rugged, so they can take extremes of climate; dependably precise under all conditions . . . ideally suited for every assignment from missile tracking to full-scale studio productions!

small WORLD

FROM ROBINSON P. RIGG'S VIEWPOINT

I had not even had time to change the silver dollars back into pound notes on my return to London before my secretary reported that this had been the busiest Spring ever for previewing industrial films and there was one in ten minutes time so I had better move fast.

I did — and was rewarded by seeing British Petroleum's latest public relations film, *Cattle Carriers*.

This film reminded me that any business with international operations can find more than enough public relations themes for motion pictures that will be sure-fire winners — if only someone will go out and look for them. British Petroleum, which has associated companies and agents in practically every country in the free world, firmly believes that people should know about them and they are following a highly successful plan in using films to tell their stories.

Glimpse of Australia's Wide-Open Spaces

Cattle Carriers is a 29 minute colour film set in Australia and provides an exciting glimpse of the wide open spaces in Western Australia where cattle are transported in giant 48 ton diesel trucks (yes — British Petroleum sells diesel oil!) from the ranges to the railhead — an 800 mile journey through some of the world's roughest and toughest country. In days gone by the cattle was driven "on the hoof" and the journey took four months — by diesel truck it takes 40 hours — 120 head of cattle at a time.

The film shows one such trip and the "stars" are an Australian cattleman driver and his co-driver, a green horn Englishman who has recently emigrated as a "new Australian." It has all the thrills and humour of the best type Western — and at the same time it is a truthful and convincing demonstration of the way in which petroleum and modern transport make light work of man sized jobs.

Example of International Film Teamwork

The production itself is a fine piece of international cooperation. The film was sponsored jointly by British Petroleum companies in England and Australia, England supplying the producer in the person of Humphrey Swingler of Greenpark Productions who also looked after the scripting and editing; Cinesound Productions Pty. in Australia supplied Volk Mol and his camera team as well as the theme song composed by Don Banks.

So British Petroleum got the best of both worlds. In more ways than one, too, for the film has been selected as a British entry at the forthcoming Venice Film Festival and it will open the Melbourne Film Festival. In North America it has already been entered in the Vancouver Festival and is being considered for the San Francisco event. In Britain, Paramount is handling its theatrical distribution.

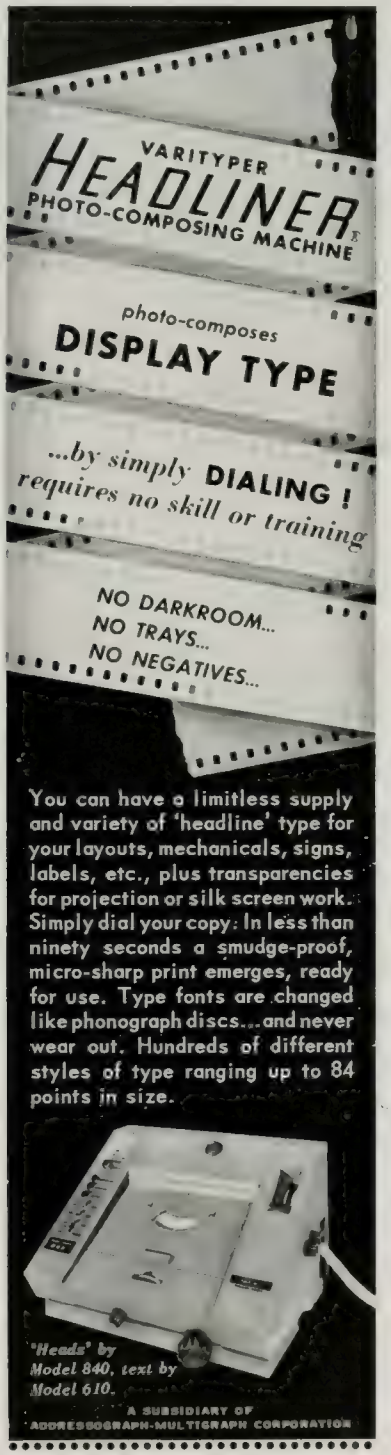
Other British Petroleum films which follow the international theme are *Route des Cimes* (trucking across the Alps in winter); *Le Capitain H* (barges on the river Seine in France); *Guiseppina* (1961's Oscar-winning short, set in Italy); *Mikahli* (a boy/girl story in a Greek fishing village); and *Newspaper Run* (delivering newspapers by air in Sweden and Lapland.)"

In all the films the sell is so soft that not even the most sensitive audience could be offended — and in each case we learn a little more about how other people live and work.

Show Transport Films to U. S. Audiences

Another man who believes in international exhibition of his films is Edgar Anstey who heads up British Transport Commission's audio-visual division. Edgar has a double job — to communicate with the 800,000 men and women who serve Britian's nationalized rail and water transport organization — and to inform the public about the advantages of travelling by rail.

He will have visited New York on 15th through 26th June, presenting a selection of his prize-winning films at the R.C.A. theatre, including *Terminus*, another British selection for the Venice Film Festival. At the same time he will negotiate for distribution of his films in the United States on both theatrical and non-theatrical circuits.



Anstey wants to meet as many industrial audio-visual men as he can in New York. His background is that he worked with John Grierson as a director and set up the Shell Film Unit way back in 1933. Later he worked on the *March of Time* series and developed the British Transport Commission's audio-visual programme after World War II. He is currently President of the International Scientific Association and is a past President of the British Film Academy. In New York he can be reached at British and Irish Railways Incorporated, Fifth Avenue.

New 16mm Silent Projector Weighs 12 lbs.

I thought the designers had excelled themselves when they managed to pack motion projectors into overnight bags — but now Bernard Coleman, a British engineer, has designed a 16mm silent projector weighing 12 lbs. which is no larger than a portable typewriter, and he is busy making an 8mm version as well.

Coleman is of the opinion that many teachers and sales representatives prefer a silent movie to help put over their message. Accordingly, the projector is in silent form and has a remote control that enables the operator to project at normal or infinitely variable slower speeds and operate a retrieval system to select any desired part of the film. Other facilities are an automatic lamp change on light failure, and a most

PETER RIGG'S COMMENTARY

(CONTINUED FROM THE PRECEDING PAGE)

effective heat filter to enable pictures to be held on the screen indefinitely. The projector is designed to sell in Britain for $200.

I was interested in the idea of using a silent desk-top projector for sales demonstrations and discussed the technique with a number of firms who had bought Coleman's earlier projector which was hand operated. They reported that it was a good investment.

A London firm, Catmur Machine Tool Corporation, who market the Moore Jig Grinding Machine, bought three projectors and had two 8 minute 16mm demonstration films made — all for a cost under $750. In less than twelve months over $30,000 worth of sales were directly attributed to the projector's use. Another firm, British Oxygen Company, uses the machine to demonstrate automatic welding equipment at overseas sales pitches and technical lectures. Other firms use the little projector for staff training.

Europe Needs Films on Staff Training

There is a great need for good films on staff training in Europe and extensive use is made of material from the States. In 1959, a series on works supervision, originated from McGraw-Hill, was introduced in England and is in regular use by such companies as J. Lyons & Co., Shell-Mex and B. P., the U. K. Atomic Energy Authority and in many of the Commonwealth countries.

Now I hear that the junior and middle management supervisor films produced by the Bureau of National Affairs of Washington, D.C. are going down very well in Britain. So far three are available—*Listen Please* which shows how important it is for a supervisor to be a good listener — *The Case of the Missing Magnets* which is a detective story type film to encourage the audience to pick out clues as to why production is going down — and *Instructions or Obstructions* which demonstrates how faulty or carelessly expressed instructions can cause serious confusion.

It seems that the United States is in the lead for this type of film, and has been since 1954 when we in Britain first saw the Henry Strauss productions for the International General Electric Company of New York — supervisory training films which are still being used in many of our industrial organizations.

Dartnell's Sales Films Are Widely Used

The extensive Dartnell library of sales training films is also widely used throughout Europe. Distributed by the Rank Organization, this collection is translated in French, German and Scandanavian tongues.

President W. J. Connelly delivers keynote banquet address.

Announce Winners at Ninth Day of Visuals

Awards Climax Two Days of Seminars, Exhibits in New York

THE "NINTH DAY OF VISUALS" — a two-day program of seminars, a national awards competition, and an exhibit of audio-visual equipment and services — completed a successful run June 4-5 at the Hotel Roosevelt in New York under the auspices of the National Visual Presentation Association.

This year's seminars, organized by chairman Bob Yung of Elektra Studios, attracted a total attendance of 2,500 — a new high for this annual event. On the opening day's schedule, "Progress in Visual Presentations" reviewed the usage of audio-visual in everyday business. Featured speakers were Herb Rosenthal, Graphics Institute; Miss Anne Walsh, Dun & Bradstreet; Bob Frances, American Machine & Foundry; and Irving Block, Blue Cross Association.

A luncheon demonstration by Bob Hills of the SATURDAY EVENING POST showed how this master of audio-visual presentations puts on his editorial promotion shows for nationwide advertising audiences.

Panels on Standards, Techniques

In the afternoon, two panels discussed the need for improvement in audio-visual standards, and new techniques now being used in presentations. Panelists on "The Target Shoots Back" were Bill Hodapp, producer; Alec Ferguson, National Council of Churches; Don Hillman, National Education and Television Center; Al Rosenberg, McGraw Hill Book Company; and Hubert Wilke, TelePrompTer Corporation. Panelists on "1,001 New Ideas" were Ray Helser, Informatics Center; Ben Schultz, Techni-Fax Corporation; Jack Moss, Jack I. Moss, Inc.; and Bill Herrick, of the Muller, Jordan, Herrick Co.

Closing the first day's program was the Annual Awards Banquet highlighted by a cleverly-visualized keynote address "The Promise and Purpose of Audio-Visual Presentations" delivered by NVPA President, William J. Connelly.

The second day's opening seminar looked into "The Future of Visual Presentations" and examined the universities' attitudes in the training of tomorrow's audio-visual specialists. The audience at the combined National Visual Presentation Association-Sales Executives Club of New York Luncheon was treated to another effective audio-visual case history with International Paper Company Director of Promotion and Presentation Allen Wylie's program, "Visuals Make Dollars and Sense".

Visuals "Around the World"

The closing seminar gave the Ninth Day of Visuals an international flavor with "Visual Presentations Around the World". It consisted of screenings of four outstanding films produced respectively by the participating countries, France, Germany, Italy and Japa Each film was introduced wi comments by an official represer ative from its country.

Les Alchemistes (Pechniney I dustries) was introduced by t Deputy Cultural Counsellor of t French Embassy, Jacques Pouj He said, "Industrial films ha unquestionably occupied a fi foothold amongst the various i dustries in France — and its f ture growth in importance is high optimistic."

New Industrial Film Center

Stahl: Thema mit Variation was introduced by Consul Ha von Wallenberg of the Fede Republic of Germany. "A n headquarters was recently erect in Cologne for administering t rapidly rising increase in the pr duction of German industrial film More than 2,000 titles are now file and many more are expect in the coming years", he sa

Toleranza Zero (Fiat) was troduced by Vice-Consul Gior Reitano of the Republic of Ita Dr. Reitano said, "Fiat Motor C Company, along with many oth industries in Italy, has found creasing demands for the usages industrial films."

Symphony Japan (Foreign Mi stry of Japan) was introduced

Elektra's Animated "Genesis" Selected for Venice Festival

☆ *Genesis*, an entertainment film feature produced in animation by Elektra Film Studios, has been selected by CINE to represent the United States at the Venice Film Festival, early in July.

Genesis marks the expansion of Elektra Film Studios to include the production of entertainment films for theatrical and television use. Abe Liss, President and Creative Director of Elektra and producer of *Genesis*, reports that a number of additional entertainment projects are now in production.

Genesis, a 13-minute treatment of the First Book of the Old Testament, is narrated by Alexander Scourby and has an original score by Carlos Surinach. United States and international theatrical release of the color film is planned following the Venice Film Festival. The production is also intended for possible use in a series of network television specials.

KALART VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

The Dependable One

There's something very comforting about the way a Kalart/Victor projector runs. Whisper quiet. Almost without effort. And above all, dependably. It's *always* ready to put on your program.

One reason is the lubrication system designed exclusively for Kalart/Victor projectors. Oil is metered from a large reservoir on "demand feeding" by means of a wick. Parts are given only the amount of oil they actually require. There can be no leakage because the oil travels *upward* through the wick by capillary action. One filling of this oil reservoir keeps the projector running smoothly for some 1,200 hours, or a full year of heavy use. What efficiency!

Of course, there are a score of other features that contribute to Kalart/Victor's reputation as the *dependable* 16mm sound projector. Your authorized Victor Audio-Visual Dealer will be more than pleased to point them out to you.

Free — "How Industry Profits from Films." Booklet is packed with information on use of audio-visuals in every phase of business, from training to sales. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 14V.

KALART VICTOR

VICTOR ANIMATOGRAPH CORP., DIVISION OF KALART, PLAINVILLE, CONNECTICUT

Science Brings Hope to the Handicapped

"To Live Again" a Stirring Documentary About Rehabilitation

THIS NATION'S concern for the chronically-ill, the vast resource of manpower among the physically-handicapped and the combined efforts of government and science to aid these people is the stirring background for *To Live Again*, a 30-minute color film sponsored by the Office of Vocational Rehabilitation, U.S. Department of Health, Education and Welfare.

Produced and directed by Phil Martin of Norwood Studios, prints are available through exchanges of Modern Talking Picture Service, Inc., and may also be purchased from Byron Motion Pictures, Washington, D.C. OVR officials have the film in their state offices.

Produced in Eastmancolor

Initially shot in 35mm Eastman color, the film takes its cue from this professional format to deliver its documentary-styled treatment with theater-quality style and strength. Basic message lies in the ways in which science has striven, over the past 15 years, to overcome both physical and psychological handicaps which hold these victims of illness, deformity and other handicaps from the useful roles they may play in life.

To OVR Director Mary Switzer goes the credit for a long-felt hope and plan which brought this film to the screen. Gregory Cecala's script employs a believable story line as the film's hero (Sam Watkins) is prodded into rehabilitation work by an orthopedic surgeon. A lovely polio patient, confined to her wheelchair and a "case" for Sam, provides the heart interest.

Through the Eyes of a Patient

How to Produce and Budget a Business Film

Basic Steps Outlined by Association of National Advertisers

HELP FOR TOP EXECUTIVES who want to know more about *costs* involved in business film production has come from the Association of National Advertisers. Providing, in considerable detail, some 22 steps involved in the development of a business film and the cost elements to be considered by the sponsor, is a current ANA Report. "Steps in Producing and Costing a Business Film."

The 28-page analytical study is the work of a special subcommittee of the Association's Audio-Visual group, headed by Alden L. Livingston, presently an advertising executive in E. I. duPont deNemours & Company. Peter Mooney, Treasurer, Audio Productions, Inc. served as the coordinator of the project on behalf of the Film Producers Association of New York, which cooperated in the study. Roy Vanderford, American Telephone & Telegraph Co., was also a key figure in the preparatory work.

***Define* Objectives *and* Audience**

The basic 22 steps are most helpful to the sponsor. They begin with "Defining Objectives" and "Defining Audiences" as *essential* prerequisites to the film and they cover the selection of the producer, researching and developing the film's "treatment" — then move swiftly into the working details of actual production.

Experience, aptitude, creative and technical personnel, capability, reliability, financial stability and studio location and availability are cited as key attributes for the selection of the producer. They are further amplified in another ANA report, "Responsibilities of the Film Producer and Sponsor" and will merit close study by the prospective user of producer services.

Exhibits in the book include rates of pay for motion picture technicians which were in effect in 1961 and provide examples of "production elements contained in three hypothetical motion pictures." Budgets for these film examples are $10,000, $50,000 and $150,000. The elements are "based on achieving an effective and economical motion picture at each cost level."

Available to Non-Members

Cost of the report for non-members of the ANA is $5.00 a copy. Requests should be directed to Herbert A. Ahlgren, Administrative Secretary, Audio-Visual Committee, Association of National Advertisers, 155 East 44th Street, New York 17, N. Y.

KALART VICTOR

MOVIEMATIC REPEATER PROJECTORS

PLUG IT IN AND IT'S READY TO SHOW

That's all there is to showing your 16mm sound films with a Moviematic Repeater Projector by Kalart/Victor.

No reels of film to thread. No separate screen to set up. No need to darken the room. This adds up to a new dimension of convenience in showing sound films when you use a Moviematic.

Moviematic Repeaters project your film from a power-driven magazine which eliminates threading and rewinding. Show the film once, and it's automatically rewound and ready for a repeat performance immediately.

Moviematics with built-in screen and repeater magazine are designed to help you tell your story anywhere —from the top of a prospect's desk to a counter at point of purchase. A wide range of models satisfies every requirement.

Projectors are available 3 ways: (1) for purchase, (2) for lease, and (3) for lease to purchase. Your needs can easily be met whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 14T

9th International Ad Film Festival

TV Grand Prize to MPO; Lawrence Wins Venice Cup as European Studios Sweep Theater Screen Awards

Right: scene from the United Brewers tv commercial which won Grand Prize in Television category at Ad Film Festival held in Venice, Italy last month.

EUROPEAN PRODUCERS of screen advertising playlets won top honors (including the *Grand Prix du Cinema*) at the 9th International Advertising Film Festival held in Venice, Italy last month but U.S. producers of television commercials swept top prizes in this second half of the ad film competition.

The *Grand Prix du Cinema* went to a Johnny Walker film, *Bashful Glasses*, produced for the S. H. Benson agency of London by Cineastes Associates. Estudios Moros-Movierecord S. A., Madrid producer, won the Venice Cup, awarded to the producer with most individual prizes. Estudios Moro had three first prizes and a second award in the theater screen categories.

TV Awards to U. S. Studios

Robert Lawrence Productions, Inc. of New York was the winner of the Venice Cup for television leadership with the highest average score for six or more tv entries. Commercials for Clairol and General Motors were among the Lawrence films contributing to the award.

But the *Grand Prix de la Television* for the best single spot in the competition went to MPO Videotronics Inc., New York, for *Who Says Beer Is a Man's Beverage?* produced for the United Brewers Association through J. Walter Thompson agency.

Winners of Cinema Honors

Winners of first prizes in the Cinema category were as follows:

1. Live Action: 13 to 30 metres: *Adam and Eve*, produced for Oranges Munar by Vandam K-H.
2. Live Action, 30 to 55 metres: *Quelle Aubaine Pour Les Parisiennes*, produced for Grandsmagsins by Cinema et Publicite.
3. Live Action, 55 to 110 metres: *Sing a Little Song*, produced for St. Michael Garments (I.C.I. Fibres Division) by Saward, Baker & Co., Ltd.
4. Cartoon, 13 to 30 metres: *Galeria*, produced for Tasada & Beltran, S.A., by Estudios Moro-Movierecord.
5. Cartoon, 30 to 55 metres: *Salud Dinero & Mas Arroz*, produced for National Syndicate of Rice by Movierecord, S. A.
6. Cartoon, 55 to 110 metres: *The Marriage*, produced for Barclays Bank by the Larkins Studio in association with the Film Producers Guild.
7. Puppets & Marionettes, 13 to 110 metres: *Produit de Beaute Pour les Mains Atrix*, produced for Ste. Beiersdorf by Les Films Pierre Remont.
8. Animated Objects, 13 to 110 metres: *Die Welt*, produced for Tagezietung by Deutche Dokumentar-und Werbefilm Gmbh.
9. Cinemascope (Wide-Screen Techniques), 13 to 110 metres: *Disipa la Tristeza*, produced for Vino Espumoso by Estudios Moro-Movierecord.
10. Series, Live Action, 13 to 110 metres: *Bonbons*, produced for the Continental Society of Confe tioners by Les Cineastes Asso ates.
11. Series, Animation, 13 to 1 meters: *Ba-Fix*, produced f Ruba fix Ste. by Les Films Pier Remont.

45 seconds: *Tools to Trust*, produced for Spear & Jackson Tools by Guild Television Service, Ltd., Oelrichs Advertising, Ltd. (England).

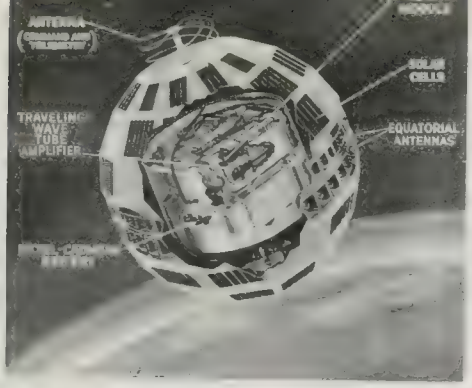
Animated Objects, over 45 seconds: *Nabisco Dancing Saltines*, produced for the National Biscuit Company by N. V. Joop Geesink's Filmproductions, via McCann-Erickson, agency.

Series, Live Action, over 15 seconds: *Durability*, produced for Aluminum Company of America by On Film, Inc. via Fuller & Smith & Ross, Inc., agency.

Series, Animation, over 15 seconds: *Frisky Man*, produced for Robert Wilson & Sons Ltd. (Kennomeat Dog Food) by Les Cineastes Associates via S. H. Benson, Ltd., agency.

Awarded diplomas for honors in the television category were *The Tirol Story* (Acts I & IV) produced and entered by Robert Lawrence Productions and the General Motors' commercial, *Boys and Girls* entered by the same studio.

Two Groups Sponsor Event



The International Advertising Film Festival, entirely devoted to the *commercial* films for cinema and television advertising use, is jointly sponsored by the International Screen Advertising Services and the International Screen Publicity Association.

Membership of these groups includes nearly all producers of these subjects on the Continent and in England as well as several leading firms in the United States. An international Jury is selected annually to view all entries in both cinema and television classifications. These judges are selected from national and international advertising associations and federations in Europe and the United States for each Festival.

Above: a cut-away drawing of Telestar satellite. **Left:** historic July 10 scene as board chairman Frederick Kappel's image was beamed into space.

Telestar: Sight and Sound Span the Atlantic

Success of A T & T's Communication Satellite Speeds Advent of International Television

PRIVATE ENTERPRISE made a dramatic contribution to the space age on July 10th. The successful orbiting of the first experimental communications satellite, Telestar, also made communications history for within hours the precise instruments set up by Bell Telephone Laboratory scientists and engineers were bringing televised pictures and sound to the peoples of France and England. Within days, a television program had been successfully transmitted from Paris to the United States.

The American Telephone & Telegraph Company, with an investment in this project estimated at nearly $50 million, has brought the people of the world a tremendous scientific advance. Certainly, the all-too-brief periods available for transmission via a single satellite do not yet make a workable system. But the important beginning has been made and the challenge to governments and peoples to use it wisely and well is squarely before them.

There are new place names in history, too, as Bell System ground stations at Andover, Maine and Holmdel, New Jersey became datelines for thousands of news-stories. NASA, which handled the successful launch for AT&T, also provided facilities at Goddard Space Flight Center and along its world-wide tracking stations as well as those of the Atlantic Missile Range.

The French Ground Station is at Pleumeur Bodou in Brittany; the British station at Goonhilly, near Falmouth, England. Other ground stations are being constructed in Italy and West Germany. Although television programming had not been expected on a formal basis for at least two weeks after the launch date, the U. S. pictures aimed from the satellite for reception in Washington, D. C. were clearly visible in France; nearly as vivid in Britain.

What did man say at this historic moment? What images were visualized as instant world-wide audio-visual communication became a sudden, startling reality?

The first telecast via space opened with a view of the American flag rippling in the breeze. AT&T board chairman Frederick Kappel was pictured in a telephone call relayed from Andover, Maine to Vice President Lyndon Johnson, the President's appointed chief of space development programs, who received it in the presence of dignitaries in Washington, D. C.

* * *

Many problems remain but Americans could view with pride the background films immediately available to the television networks through the facilities of AT&T's motion picture department. Both Andover and Holmdel installations had been completely covered weeks before the expected launch date.

The first formal Telestar program from Europe is the next big event for the satellite's log. Scheduled (at presstime) for 5 p.m. Monday, July 23rd, a 15-minute live program opens in London with Big Ben chiming the hour, switching to Paris and Rome as 54 television cameras utilize the European Broadcasting Union facilities in 16 nations to unfold scenes from Northern Sweden to the Sistine Chapel in Vatican City.

Control room of Bell System's satellite communications earth station near Andover, Maine. Consoles in foreground are for satellite tracking use.

Aerial view of earth station near Andover. Building (foreground) houses computing, tracking equipment to operate horn antenna in dome at rear.

Where every filmstrip gets major motion picture care!

At CFI the same talent and technology that have gone into 40 years of processing major motion picture films go into your filmstrip. The same consistent excellence that only precision equipment can produce. The same accurate chemical control. The same 100% inspection. What does this mean to you? The craftsmanship you put into the original concept and execution reaches the screen. The impact you put in . . . CFI brings out.

CFI's COMPLETE 35MM FILMSTRIP FACILITIES:

- Masters in color and black-and-white
- Superimposures • Art work • Titles
- Direct photography of products or inserts

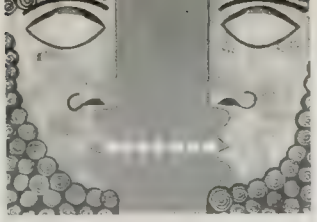
History of World's Fairs Collected in MPO Library

THE 1964 New York World's Fair has started to edge into the spotlight of national interest now focused on Seattle's Fair. Every communications medium is beginning to feature the big Fair; print, television, motion pictures. To prepare for future needs of its clients, MPO Productions, over the past year, has assembled one of the most complete libraries of World's Fair information and memorabilia ever assembled.

The project was started because of the personal interest of Murray Lerner, an MPO producer-director, and his wife, Judy. The Lerners have spent a great deal of time visiting each of the sites of former World's Fairs, gathering books, pictures, films and tape recordings. Much of the collection is on extended loan from private libraries throughout the United States and Europe. Some of the material is in this country for the first time.



Lerner notes that it is remarkable how much a World's Fair is a miniature capsule of its time. Each one sought eagerly to plot the future of the world to come, but the wildest dreams of each Fair were paltry compared to the realistics and commonplaces of the succeeding one.

For those who can't remember, the first World's Fair, in London's Crystal Palace, was held in 1851. Since then, there have been 19 others: New York-1853, Philadelphia-1876; Paris-1889, Chicago-1893, St. Louis-1904, San Francisco-1915, Chicago-1933, New York-1939, Brussels-1958, Seattle-1962. The MPO library covers each in detail through microfilm slides, original photographs, stereographs, newspaper clippings, etchings, lithographs, original motion pictures dating back as far as 1900, old song sheets, posters, sketches and drawings. Each of the thousands of items is catalogued according to subject matter: architecture, opening day ceremonies, construction, midway, symbols, landmarks, etc. Each Fair is covered from its planning stage to its conclusion.

In Chicago, Lerner made films of and recorded a group called the '93ers who gather for a picnic every year to relive the thrills and excitements of the great Columbian Exposition. In Paris, his cameras called on the grandson of Mr. Eiffel, who built the great tower as a symbol of the 1889 Paris Exposition. There is an original menu from the Eiffel Tower restaurant, and an 1851 London-published edition of "The Adventures of Mr. and Mrs. Sandboys and Family Who Came up to London to Enjoy Themselves and See the Great Exhibition."

The World's Fair library, Murray Lerner believes, can prove invaluable as background material for many film projects. It can provide the entire basis for theatrical shorts and television programs; it can be used for film introductory passages — putting industries into historical perspective; and as the background for sponsored films at New York's Fair.

Scenes in Xerox' visualization show progress in communication down through the years.

Concepts in Communication for Century 21

Xerox "Theater-in-the-Round" at Seattle World's Fair Shows Library of the Future

IT MAY SEEM unusual that Xerox Corporation of Rochester, New York, a manufacturer of copying equipment, should participate in the Seattle World's Fair. Unusual because of the size of Xerox (1961 sales of approximately 50 million dollars), type of market served, and expected audience characteristics of a World's Fair.

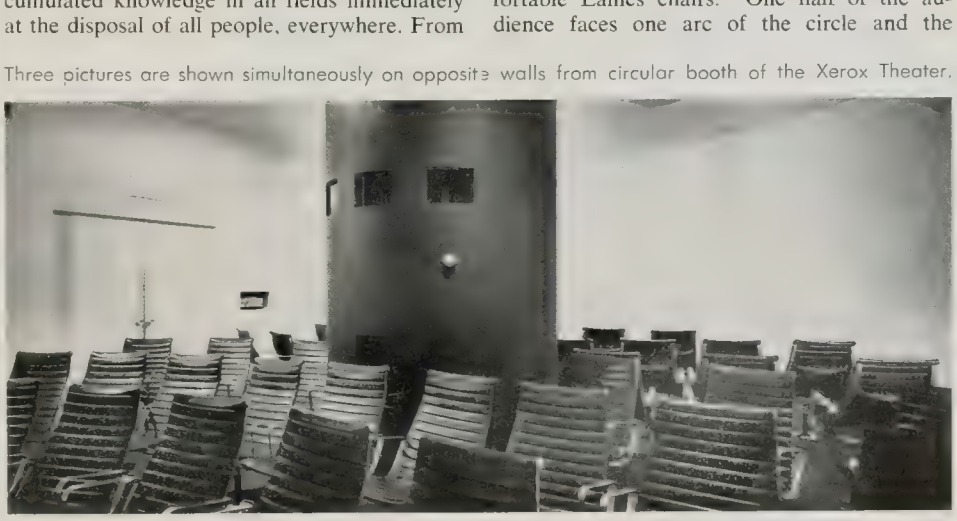
One basic fact, or philosophy, existed which led to the Xerox exhibit - "Library 21". This was predicated not only on present day activities but on the longer range projections that the company was engaged in to a significant degree — the search for better communications between men.

Xerography's Role in Communication

The unusual attributes of xerography (an electrostatic means of producing dry, permanent images of all sorts of graphic material upon any base support) point directly toward major advances in graphic communications. Within the short span of a dozen years, the xerographic process has made possible equipment capable of high-speed print-out from original documents, microfilm, cathode-ray tube, and electronic signal.

Early in 1961, a representative of the American Library Association approached Xerox with the suggestion that the company participate within the ALA section of the Seattle Fair. This section, to be known as "Library 21", would be a projection of library operation and resources in the 21st Century making use of techniques and systems that would make possible a "Core of Knowledge" to place accumulated knowledge in all fields immediately at the disposal of all people, everywhere. From this central theme came the Xerox presentation.

Limitations of a Conventional Exhibit



An exhibit in the conventional sense held severe limitations on presenting a concept of communications in the 21st Century. Even though some equipment existed to demonstrate on demand read-out of stored information by advanced electronic and electrostatic means, the end product would not necessarily be dramatic to the general public much the same as a telephone conversation or a television transmission is not dramatic today to the viewer unless one is made aware first of the research and creative genius which lies behind "commonplace" things.

What Xerox truly needed was a dramatic method of presenting a concept such that it could be easily grasped by the average visitor to the Fair. The primary objective was *not* to sell products but to make everyone aware that tremendous things were happening in the field of communications and that Xerox could play an important part in it. As an objective, the Xerox presentation should strive to elicit a generalized comment from those who attended the exhibit. That comment should be, in the vernacular, "Wow"!

Concept and Production by Visualscope

The result was the Xerox Theater — "Library 21"—conceived and produced by Visualscope, Inc. of New York. An unusual sound-color visualization tied in dramatically with lights and music. The theater is small, completely circular, and seats 39 people in comfortable Eames chairs. One half of the audience faces one arc of the circle and the

Three pictures are shown simultaneously on opposite walls from circular booth of the Xerox Theater.

The Library of the Future:

(CONCLUDED FROM THE PRECEDING PAGE)

other half the opposite arc. The circular walls are stark white and act as the "screens" for the six synchronized Busch projectors, three of which project on one wall and three on the other.

The theater fills to the sound of music coordinated with colored lights. These lights rise and fall with the changing frequency of the music and help create a mood and feeling of timelessness. After approximately four minutes of the mood creating lights and music, the theater suddenly goes dark and the film is projected — a combination of animation and live action.

The film scenes trace the history of man's communication with man through the ages ending with a projection of what might be expected in Century 21. The projection of the future indicates that "information may be requested by code or name and that within seconds an entire book or article may be made available at the library or even on a printer in a researcher's office or the reader's home. Information may be stored in different libraries — in Munich or Tokyo or Buenos Aires. The requesting library may obtain its information through a signal 'bounced off' a satellite and made available wherever the printout device happens to be."

Xerox Exhibit "Fabulous" Preview of Future for Touring Librarians

☆ Twenty-five librarians of the Western States Library Conference viewed the Library 21 exhibit at the Seattle World's Fair and wanted to take it home.

"It's magnificent. The Univac machines, the film study booths, the microfilm recorder and the teaching machines make one wish for the future to happen today. I certainly am going to try to get them for our library," said Phyllis Dalton of the California State Library in Sacramento.

Most of the exhibit concerns the future and is not now available to libraries.

"It gives us a chance to see what will happen. And it's fabulous," said Helen Dirtadion of Juneau, Alaska.

Librarians from all the western states, including Alaska and British Columbia, who attended the conference in Olympia made a special trip to Seattle just to see the exhibit.

Library 21 displays special Univacs that tell visitors individually what books they should be reading, sends them wise words from famous men and tells all the pertinent facts about the nations of the world.

The booths teach French, science, fine arts, speed-reading and other basic education material via small films and oral aids, providing intimate and personal teaching.

The Xerox film in the exhibit shows the Copyflo machine which reproduces a microfilm image in seconds while simultaneously enlarging it.

"All this is something that I never comprehended. I can hardly wait," said Mrs. Gretchen Schrenk of Summerdale, Ala., former Washington librarian.

List Best Industrial Films of Five Lands

National Committees in U. S., England, France, Italy and Switzerland and Sel Entries for the Third International Industrial Film Festival in West Ber

THE THIRD INTERNATIONAL Industrial Film Festival, where outstanding motion pictures of Europe and the United States compete on September 23-27 in West Berlin under the sponsorship of the Federation of German Industries and the Confederation of German Employers Associations, is moving rapidly toward final screening events.

American industry will be represented by 15 pictures selected by a panel of U.S. industrial audio-visual specialists working through the National Association of Manufacturers. Since the Festival is held under the overall patronage of the Council of European Industrial Federations, the NAM was requested to arrange for U.S. entries. Similarly, British entries were selected by a Federation of British Industries and the British Employers Confederation. Entries from France, Italy and Switzerland were selected by national committees in those lands.

U. S. Committee Reviewed 54 Entries

Janet Wilkins, NAM audio-visual producer, was project coordinator in the U.S. and members of the panel included: William J. Connelly, Union Carbide Plastics Company; Alden H. Livingston, E. I. du Pont de Nemours & Company; Harvey Plants, General Foods Corporation; Willis H. Pratt, Jr., American Telephone & Telegraph Co., and Frank Rollins, E. R. Squibb & Sons Division of Olin Mathieson Chemical Corporation. All are leading business film specialists in the U.S. More than 54 entries were reviewed by this committee.

Chairman of FBI/BEC Film Selection Panel which selected the 15 British entries was Edgar Anstey, Chief Film Officer of the British Transport Commission and President of the Scientific Film Association in that country. Colin Phillips of Film Centre is Executive Officer to the panel.

Entries of Other Countries to Follow

The international coverage of BUSINESS SCREEN is exemplified by its early publication in this issue of entries from Britain, France, Italy and Switzerland, as well as those of the United States. Peter Rigg, our correspondent abroad, was represented in Rouen, France, during the selection work there. Titles of Austr Belgian, Dutch, German, Irish, Scandinav and Spanish industrial film selections for Berlin Festival will be provided in the issue. Their closing dates were immedia after publication of these first lists.

Below: scene from Pan American's "Strangers in Paradise" one of U. S. festival selections.

The 15 U. S. Entries Going to Berlin

Here are the 15 outstanding U.S. films g to Berlin:

An Answer for Linda, American Telephon Telegraph Company, produced by Parthe Pictures.

Design for Beauty, International Silver Comp produced by Vision Associates.

Don't Hesitate to Ask, Pan American World ways, produced by Henry Strauss & Co.

Effect on Viruses 25, Parke Davis & Comp produced by The Jam Handy Organizatio

Locked On, General Dynamics-Convair Astro tics, produced by Parthenon Pictures.

The Magic Hands of AMF, American Machi Foundry Co., produced by Farrell & Films.

The Question Tree, IBM Corporation, prod by Henry Strauss & Co.

Remington Eleven, Remington Rand Inte tional, produced by Vision Associates.

Sealed in Glass, Glass Container Manufact Association, produced by Cullen Associat

Strangers in Paradise, Pan American World ways, produced by Henry Strauss & Comp

Tyranny of Large Numbers, Western Ele Company, produced by Pelican Films.

Vacuum Pouring for Better Forgings, Bethle Steel Company, produced by Audio Pro tions.

A Voice for Mercury, Western Electric Comp produced by Audio Productions.

Wire for Sound, American Telephone & T graph Company, produced by Owen Mu Productions.

Where Mileage Begins, General Motors Cor tion, produced by Audio Productions.

THE BEST FROM FRENCH INDUST

Alpha Beta Gamma, French Atomic Energy C mission, produced by Son et Lumiere.

Attention Blinde; Qui s'y Prend Mal est Pris; Coup de Fouet; Ne Perdez Pas la Tete- films on accident prevention, Houilleres du B du Nord & du Pas de Calais, produced by et Lumiere.

Autour d'un Tour, S.N.C.F., produced by French Railways Film Unit.

Batir sur le Sable, Gaumont Industrie, prod by Sobrepik. (*Continued on page*

Timely Look at Thailand

Wilding Cameras Focus On An Ancient Kingdom

RODUCTION CREWS of leading American studios have ranged afield in recent months, capturon color film the life and cusns of peoples around the world. v of these projects are more ely than the recent series porving the kingdom of Thailand, nt center of front-page news, ned by Wilding, Inc. in 35mm stmancolor for both theatrical d 16mm audience release.

howing to Theater Audiences

Foremost in this series is the minute *Waters of Bangkok*, v showing on theater screens ughout the country through the lities of Paramount Pictures. s colorful tour of the "klongs" canals of Thailand gets to the y heart of the country. Replened with the life-giving rain of h monsoon cycle, this maze of rconnecting waterways provides Thai people with their principal means of transportation, communication and food.

Waters of Bangkok takes the viewer from windswept rice fields to the crowded canals of that principal city, often called the "Venice of the East."

Thai musicians are lensed for a scene in "Camera on Thailand."

Although there is no credit title or mention of the company in the film, Eastman Kodak is making its presentation possible. The only "commercials" are the familiar views of tourists with their inevitable cameras in action.

Two 16mm Titles Released

Two other subjects, both released in 16mm, complete this series. Billed under the general title: *Camera in Thailand*, these are 13½-minute films for both television and general audience distribution. The first is a penetrating look into Thai life and customs, titled *People of the Waters*. The second film is *People of Buddha*, a study of the religious background of the country, its symbolism in sport and dance as well as the rich character of its temples and devoted leaders.

People of Buddha also traces the footsteps of the ancient Khmers in neighboring Cambodia, visits the famed temples of Angkor Wat and Angkor Thom.

Scenes of orange-gowned Buddhist monks with their parasols, of the famed Golden Buddha, of the figure of Mother Earth who drowned the Evil One with water wrung from her hair, and of the summer palace of Thai kings all make the *People of Buddha* a fascinating adventure in a land so much in the news and yet so little known beyond its borders. This 16mm series will be in wide demand for years to come, while millions will have caught the spirit of the land through the theatrical showings.

Script, Direction by Mel London

The series was written, produced and directed by the talented Mel London of Wilding, Inc. Camera work by Bruce Herschensohn is outstanding, makes full use of the latitude and fidelity of Eastmancolor, used throughout these memorable motion pictures.

The leisurely rhythm of life on the "klongs" or canals of Thailand provides colorful background for this waterway scene in "Waters of Bangkok."

ow: a gilded "norasingh," halfhan, half lion, guards entrance to Pantheon, shrine of kings.

Shopping is easy along the waterways of Thailand. Floating customers simply pull up to the many vendor docks located along the countless "klongs."

Cicadas can be controlled by Sevin.

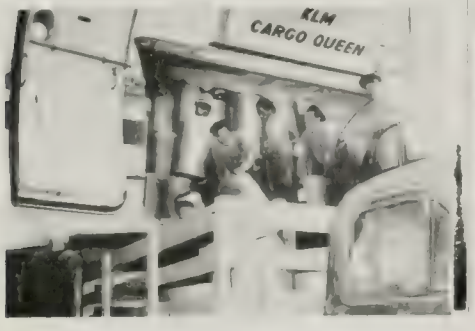
Worldwide War on Insects

Union Carbide's New "Sevin" at Work

SPONSOR: Union Carbide International Corporation.

TITLE: *The World of Sevin*, 22 min. color, produced by John Savage.

☆ This film describes the work of a new insecticide, Sevin, in ten different countries. It shows how the people in these countries live and farm and how they are applying new technological advances to increase farm production and better their standards of living.



Local camera crews photographed farmers applying new Sevin insecticide to control pests on a variety of crops and livestock. Countries and agricultural areas included in the movie are Australia, Argentina, Trinidad, El Salvador, Japan, Spain, France, Africa, the Middle East and parts of the United States. Other highlights are harvest scenes, a Sevin insecticide airlift to Egypt and an Argentine cattle round-up.

Sevin is described in the film as safer than DDT and effective against more than 400 different insect pests. It is said that the insecticide can be fed to dairy cattle without contaminating milk, and that it will not store in cattle or poultry tissues when properly applied.

The World of Sevin was skillfully assembled by writer-producer John Savage, working with Jack O. Flynn, Union Carbide Photography Supervisor, Public Relations Department. From footage shot by crews all over the world, they have produced a well-integrated, exciting, fast-paced agricultural travelog packed with information for anyone who is interested in farming and insect control.

Groups can arrange for free showing from D. R. Ackerson, Union Carbide International, 270 Park Avenue, New York. English, Spanish, Portuguese, French and Arabic versions are available.

Emergency shipments of Sevin for Egypt went by largest airlift in commercial aviation history.

GM Unveils a New Version of "We Drivers"

Winner of 1936 National Safety Honors One of "Most Popular" Films in GM Lib

SPONSOR: General Motors Corporation.

TITLE: *We Drivers*, 28 min. color, produced by The Jam Handy Organization.

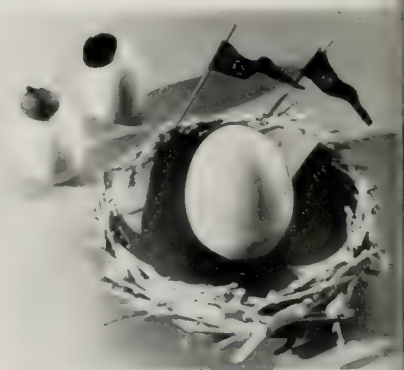
☆ Playing a key role in the ceaseless fight against traffic accidents is a perennial General Motors film favorite, *We Drivers*. Winner of a National Safety award in 1936 and a consistently popular audience choice, it has now been completely revised in a new 16mm Eastmancolor version produced by The Jam Handy Organization.

In *We Drivers*, the "inner voice" of a driver's conscience plays the theme role. drivers *know* the rules of courtesy and s but only those who *heed* the "voice" safe pilots

Through special photography, the dri "alter ego" appears on screen when he s to make a mistake. Prodding his subconsc mind with words of caution, the techn provides viewers with many constructive ing tips as well. Tops for public, school driver training audiences, this film is o way to new audience records!

Holiday Presents Pre-Test Film at Media Buyer's Desk

SPONSOR: Curtis Publishing Corp. (HOLIDAY MAGAZINE)

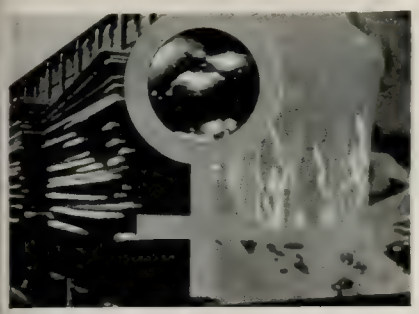


TITLE: *The Egg and You*, 20 min. color, produced by Hartley Productions.

☆ HOLIDAY MAGAZINE is currently using a promotional film, *The Egg and You*, to announce a new service that will enable advertisers and their agencies to pre-test reaction of readers to new products or services, advertising themes, and other marketing plans.

To present the film to advertising audiences in its eleven sales regions, HOLIDAY will rely on small luncheon showings for individual companies and agencies, but in addition, the magazine plans to go right to media buyers' desks with an 8mm sound version and Fairchild Cinefonic repeating projectors.

"Leadership" families like those in the HOLIDAY audience, the film points out, are the first to buy a new product, or to set a style or start a trend. They are business and social leaders, have above-average incomes, are better educated, and are more active and discriminating. It has been demonstrated that what the general public will think or do can be predicted by their attitudes.



Through sample surveys among its readers, HOLIDAY says, an advertiser-client can test the degree of interest which will exist for a new

Transition scene in the new copper film.

Copper: Servant of Mankind

Phelps-Dodge, U. S. Bureau of Mines Present Story of "The Oldest Metal"

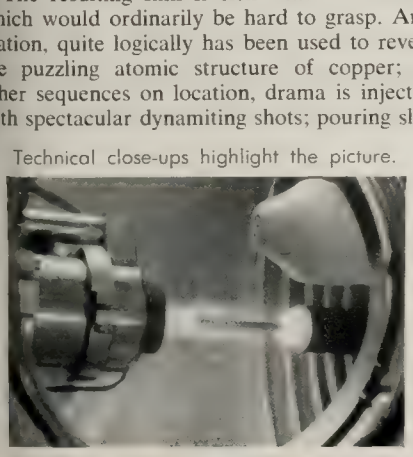
SPONSOR: Phelps Dodge Corporation.

TITLE: *Copper—The Oldest Metal*, 28 min. color, produced by Jamieson Film Company.

Longfellow once wrote: "all the means of ction . . . the shapeless masses, the materials . . lie everywhere about us." And it's up to an to explore, discover, shape and use these lements of nature.

Since the dawn of civilization, copper has een an essential element in the technological dvance of mankind. But significant quantities o *not* lie all about us; rather, it is relatively arce, and the search for copper bearing ores es on throughout the world continuously.

Shows Mining Methods in Southwest



In the Southwestern United States the pink rainy hills region is rich in the metal and it is ined both underground and in open pits. Cop- er mining in this area is a big, complex busi- ess and the Phelps Dodge Corporation, in co- peration with the U. S. Department of nterior's Bureau of Mines has recently com- leted an important film on the subject.

Copper — The Oldest Metal has been con- ived for the intelligent layman and filmed ith a variety of techniques in art work, ani- ation and live action. Jamieson Film Co., allas, producers of this 28-min., color film, ept their cameras close-in on the intricate pro- edures involved in mining, fabricating and tilizing of copper.

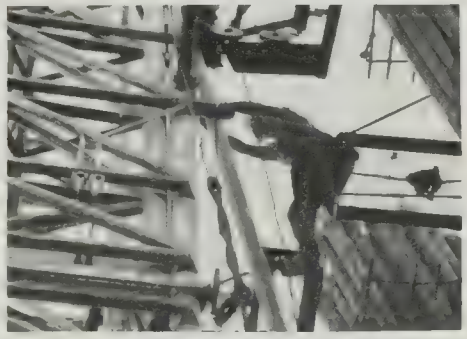
Animation Reveals Atomic Structure

The resulting film is rich with information hich would ordinarily be hard to grasp. Ani- ation, quite logically has been used to reveal he puzzling atomic structure of copper; in ther sequences on location, drama is injected ith spectacular dynamiting shots; pouring slag

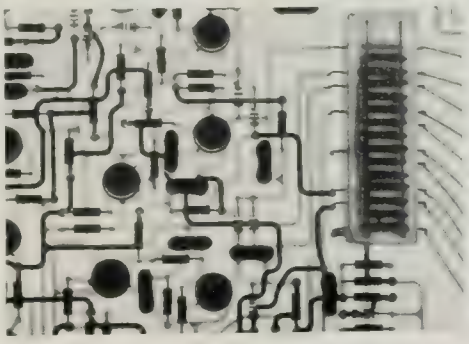
Technical close-ups highlight the picture.

in the light of an early dawn provides a memorable scene; and the endless ore trains, shifting around in a chasm of earth like a miniature freight in a sandbox is a scene few will forget.

Color, Music Add to Film's Effects



In fabrication shots color is used effectively, and original music has been carefully paced with the rhythmic machinery. As in many good new industrial films, a minimum of narration is included — or necessary.



Jamieson Film Company has used original music by Tom Merriman; Bob Jessup did the photography; art and animation was handled by John Beasley; and the film was edited by Hugh Jamieson. Dr. Nicholas Vardac of the U. S. Bureau of Mines consulted on the film.

It is expected that 250 prints will be circulated, and showings should number about 10,000 per year. Distribution is being handled through The Bureau of Mines Central Experiment Station, 4800 Forbes Ave., Pittsburgh 13, Pa.

The Bureau of Mines has five other industry-sponsored films in process, including one on helium (how will they do that when the gas can't be seen, touched, smelled or tasted?). Other films on synthetic rubber and phosphorus are expected to be completed later this year.

Close-Up: the Scientist's Role in the Search for Oil

Illuminating Facts on the "Search Into Darkness" from the Schlumberger Company

SPONSOR: Schlumberger, Ltd.

TITLE: *Search Into Darkness*, 19 min. color, produced by Willard Van Dyke.

* * *

Schlumberger is an American company of French background that has carved an important place for itself in the oil industry. Schlumberger men and equipment under contract to petroleum producing companies search for oil with fantastically complex electronic devices that chart geologic formations while looking for promising drill sites.

This activity requires a great competency, and much basic knowledge and skill that is becoming more and more useful to other aspects of industrial science and technology. Schlumberger is widening its horizons.

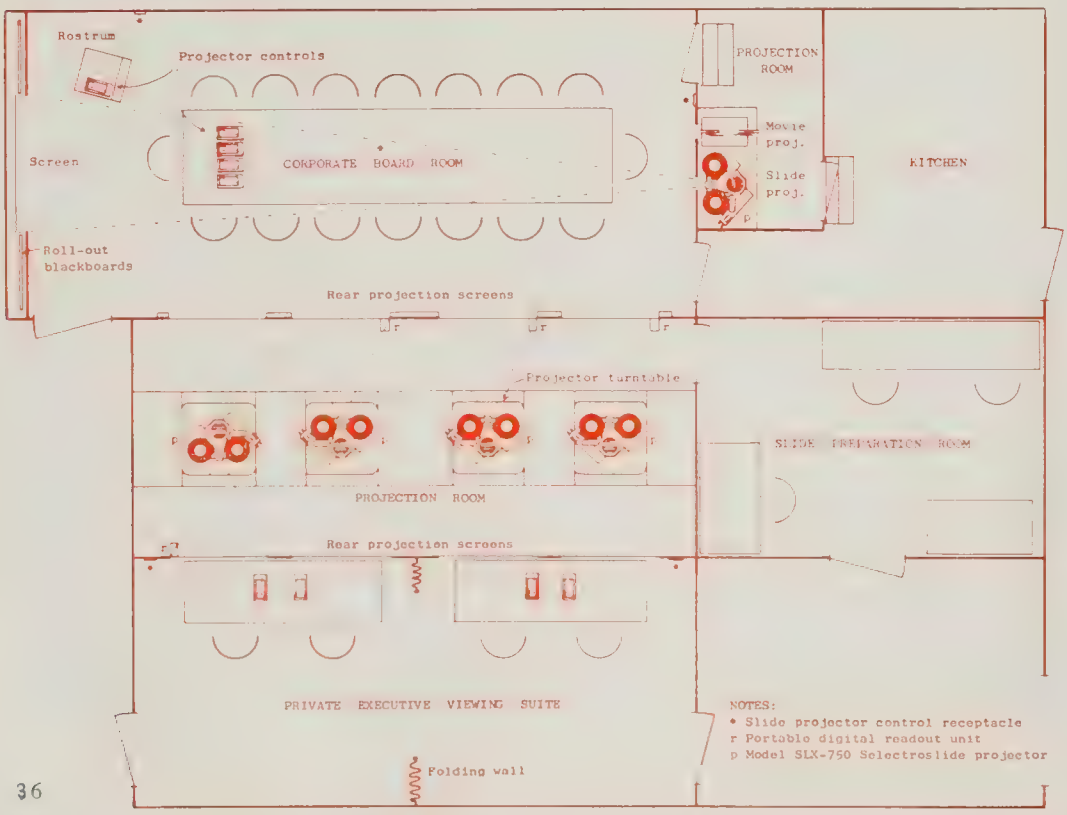
Search Into Darkness does not document Schlumberger's plans, but explores the activity of its hundreds of inquiring minds. Some of the most striking scenes in the picture show two men standing before a backboard covered with complex formulae and talking to each other about minutae involved in this or that aspect of a problem. A dozen such scenes come upon the screen, none of which has much of a message by itself, but as a part of a broader canvas, they impress us that "not all search is a matter of lonely vigils — the scientist seeks and benefits from disciplines other than his own — the hint of a solution may turn up in a chance conversation, or an unexpected phone call. But chance, Pasteur once said, favors the prepared mind. In any case, it is characteristic of contemporary investigation that it may lead to the very frontiers of our knowledge of matter."

William Jersey, who directed the film, has an extraordinary talent for showing people talking to each other as if the nearest camera were in Hollywood. He has an eye for the right face, an ear for the meaningful phrase. He works hard for this artful spontaneity, shot 80,000 feet of film of such plain subjects as men at blackboards, or electronic circuitry, or even empty corridors. But the result is surely one of the outstanding films of the year.

DOUGLAS AUTOMATES DATA FOR DECISION-MAKERS

Scene above shows Douglas' board room with pictures of four company products along wall at right. Room lights are "up" for normal conference use.

Board room "at ready" for data presentation. Pictures have given way to translucent screens for the rear projection of charts, diagrams from projection room.



Picture above shows view of an intimate executive suite on opposite side of projection room. Note the remote control units for visuals on table at left.

And here's projection room with four SLX-750 Selectroslide units on swivel turntables for showing to either board room or on wall of executive suite.

Floor plan of Douglas Aircraft Company's model projection setup for presentation of vital data.

THE COMPLEXITIES and pr lems of the aerospace ind try, requiring constant exami tion of data on which vital d sions must be based, are sha in depth by one of its leading m bers, the Douglas Aircraft Co.

Like most other large fir Douglas has used large and of bulky charts for its confere room presentations on income, penses, projected sales, trends a other pertinent data. Company p icies on daily operations and projects which will bear fruit future years — were based on chart system of data presentati

Now space age a-v automat has come to Douglas! The f multiple installation of virt "self-thinking" Random Access lectroslide projectors (the SL 750, made by Spindler & Saupp is speeding data presentation, s ing bulky chart storage space a providing quick access to facts

"This system is a real adva in data presentation," says A. Quackenbush, director of cor rate planning and control at Do las. "It gives us far greater fle bility, allows us to present same data in about half the tim

For its new setup, Douglas b a special projection room betw a large corporate conference a chart room and a smaller priv viewing room. Four translu panels were installed in b rooms. Those in the larger "bo room" are covered with remo able color photos of products.

Four Selectroslides are instal in the projection room on rotat bases which allow the operator switch machines to screens in ther of the rooms. The operato in constant communication w both rooms but actual project control on the screens rests w executives. These SLX-750 proj tors, each holding 96 slides in t patented magazines, give Doug a capability of presenting up to slides in one series. An additio unit is in the board room.

The selection system cons of a remote push-button con unit equipped with two sets of b tons: one row permits the opera to select any one of the 96 sli at any time and to return to it often as necessary during his p entation.

Saving space, gaining maxim security of vital data thro these easily-stored slide magazi and getting to essential facts which important decisions must based with greater speed are advantages which Douglas gained through this new data p entation system.

HE INDUSTRY FILM JOURNAL
tional News-Letter of the Industry Film Producers Association

aders in Communication, Science Address mbers at 3rd Annual Conference Sessions

RECORD ATTENDANCE of members from all five re- al chapters turned out for the d Annual National Confer- e of the Industry Film Pro- rs Association, which was in Los Angeles from June hrough the 16th. The Con- nce featured technical sessions, screenings and the Annual stry Film Awards Banquet. ceremonies held at the In- ational Ballroom of the Bev- Hilton, the three-day program climaxed with the presentation Cindy" Awards for the best stry-produced motion picture he past year, and special ds for outstanding contribu- s in the service of industrial munication.

These Leaders Were Cited

istinguished partipants in these monies included Dick Powell June Allyson, representing Motion Picture Industry, and NESS SCREEN publisher, Ott ln, who presented the Jay don Memorial Award to John y of Eastman Kodak. Major eral Arno Luehman, Chief, e of Information, U. S. Air e, and John Moore, President Autonetics Division of North rican Aviation were recipients pecial Cindy Awards for their ective contributions to the in- rial film profession.

onference technical sessions were held on the campus of the University of California at Los Angeles, following an invitation from Chancellor Franklin D. Murphy. The sessions opened with a specially filmed address to the delegates from the Honorable Luther H. Hodges, U.S. Secretary of Commerce.

Topics Cover Wide Range

Of major importance to the delegates were the wide range of professional topics, reflecting the growing complexity and scope of industrial communication, presented at the daytime sessions at UCLA. Penetrating perspectives of this dynamic profession were provided by British documentarian Basil Wright, film producer Irwin A. Moon, scientist Joseph Kaplan, designer Charles Eames, and non-theatrical film pioneer John Flory.

Basil Wright, who has been associated with the British film industry for nearly thirty years as writer and director, answered the question, "Whatever Happened to Documentary?"

Science and Communication

Dr. Irwin A. Moon, founder and manager of the Moody Institute of Science, spoke on "The Relationship of the Communicator and Science." Dr. Joseph Kaplan, UCLA Physicist and Chairman of the U. S. National Committee for the International Geophysical Year, followed Dr. Moon with a discussion of "The Role and Responsibilities of the Communicator in Interpreting Science to the Layman." Charles Eames, internationally known designer, presented his approach to "The Design of the Communication Message."

John Flory, Advisor on Non-Theatrical Films for Eastman Kodak Co., synthesized the state of the art with a summarization of past accomplishments, present trends, and the emerging innovations which will shape the future.

The substance of these address-

IFPA members from all five regional chapters filled the Humanities auditorium on the UCLA campus during the two days of informative general and technical sessions; heard outstanding talks by leaders in communications and science. Nearly 200 were in attendance during conference programs.

Goals Worthy of a Professional Societ

A Look to IFPA's Future by President John C. Mahon,

IN BUSINESS, industry, defense, and government — from the individual voter to the President — ours is a nation of decision-makers. Since informed decisions are based on understanding, the demand has greatly increased for information on science and technology, and on the complex programs which are sponsored by NASA and the Defense Department.

Those of us whose business it is to report and interpret industrial progress through the medium of the motion picture and television screens have to find means to improve the flow of information. That this responsibility is widely felt is clearly demonstrated by the rapid growth of the Industry Film Producers Association.

Founded only five years ago, in 1957, IFPA has this June held its third annual conference, attended by 200 representatives from five regional chapters. With a program of distinguished speakers from our own and allied fields of communication, the conference emphasized methods of increasing the efficiency of visual and aural communication.

In industry, we are practitioners of the communication arts, and new techniques will be used — or not used — in the ratio in which we train ourselves to use them. As with any professional society, one of the most important contributions IFPA can make to its members is to bring to them the results of the latest advances in the state of the art. This year IFPA will begin to expand its activities into other areas. One of these will be a study aimed at the growth of people now employed in industry film units, developing course outlines for in-plant training programs. If sufficient interest is shown, a committee will be formed to work with university extension divisions to set up public symposiums and college level courses of instruction in film communication can be offered regionally.

Looking further to the f it is hoped that when st are available to indicate the ber of IFPA members wh graduates of motion pictu partments of UCLA, USC, and other universities, the ties will recognize the ne serve this large field of film munication in their courses

To date, it has been diffic estimate the quantity of p tion of industrial film units we have all suffered for l such information. IFPA to offer a plan to establis maintain an up-to-date file of titles which will f first time reveal the quanti range of our annual product

Such a file will undou lead to wider distribution o lic release films. It may als to a valuable exchange o proprietary technical infor within industry through th dium of films. The film fi give IFPA the means to p services not possible for dual units, including the p tion of film lists and speci ject lists.

Still another way in which can serve is by coordinatin other professional associ trading articles and speaker ticipating in cooperative s and holding joint meetings.

Within the interests of and its members, and to t tent of our expanding mea will undertake the activities promise to contribute most advancement of the art c communications. IFPA w its members to fulfill their tions in a professional disp by elevating standards, enc ing experimentation, and f ing the flow of information

Those who wish to par in IFPA's expanded prog activities are encouraged t tact the Secretary of IFP 564, Hollywood 28, Califor

A Year of Accomplishment Is Behind

A Summary of Progress by Past President Raymond Fiel

WITH THE successful conclusion of our Third Annual Conference, the past IFPA fiscal year draws to a close. Both members and officers alike can look back over the last twelve months with a feeling of real acco ment. The Association h incorporated so as to pro membership and the offic to secure legal identity a manence. A sound and e

al policy has resulted from nu-
rous changes in our book-keep-
and accounting operations.
o new chapters have been add-
to our growing organization
l many new members admitted
our ranks. Finally, a new pub-
tions program has been ini-
ed which will enable IFPA to
ter serve its own members
ile simultaneously reaching
usands of other individuals in
film business and in manage-
nt circles.

During these last twelve months,
as been my very great pleasure
l privilege to have been able to
rk with an exceptionally fine
ecutive Board. Now that our

Jay Gordon Memorial Award

Through the generosity of Gor-
n Enterprises' president, the
ustry Film Producers Associa-
n presents handsome trophy
ow to the individual making
atest contribution to the indus-
l film profession each year.

Among the Association's honored guests on the Awards Banquet dais were these luminaries (l to r): Mr. and Mrs. John R. Moore; Major General Arno H. Luehman; cinema star June Allyson and her husband, producer Dick Powell.

Present Honored Guests With "Cindys" and Jay Gordon Award

☆ Guest of honor at the Annual Awards Banquet was Major General Arno H. Luehman, Director of Information for the United States Air Force.

General Luehman was presented with a special "Cindy" award in recognition of his continued support of the industrial film profession and his interest in motion pictures as a highly effective means of communication.

The presentation was made by his long-time personal friend, Dick Powell, prominent motion picture producer, director and actor.

Autonetic's president John Moore acknowledges his Cindy award.

Major General Luehman thanks the Association for awards honor.

John Flory, recipient of the Jay Gordon Memorial Award for 1962.

* * *

Special Award to John Moore

☆ A special "Cindy" Award was presented by June Allyson, motion picture actress, to John R. Moore, President of Autonetics Division, North American Aviation, Inc., in recognition of his company's outstanding pioneering effort during the past two years in the field of communication through the use of closed-circuit television for employee motivation and training.

IFPA Honors John Flory

☆ For having made the greatest individual contribution to the industrial film profession during the past year, John Flory, Eastman Kodak Company, was the recipient of the Jay E. Gordon Memorial Award. The presentation was made by O. H. Coelln, Jr., Editor and Publisher of BUSINESS SCREEN Magazine, 1961 recipient of the award.

As Advisor on Non-Theatrical Films for the Eastman Kodak Company, John Flory has been in

(CONTINUED ON NEXT PAGE)

Glamorous June Allyson (center) pictured at the pre-banquet festivities; husband Dick Powell is at left; Mr. and Mrs. John Mahon are at the right.

Rochester with that organization since 1950.

In his capacity as Kodak's non-theatrical film advisor, Flory's work puts him in contact with individuals and organizations all over the country that use motion pictures and other audio-visual aids for business, educational, religious, medical, television, governmental, scientific, and other purposes.

Flory is a veteran of more than 26 years in the motion picture field. His background includes producing, directing, writing, and distributing motion pictures. He spent five years in Hollywood on the production staff of Paramount Pictures, Inc.

In the decade prior to 1950, he was president of Flory Films, Inc., New York City, successors to Grant, Flory and Williams, Inc., producers and distributors of public relations, advertising, training, educational, and television motion pictures and slide films.

He owns a large private collection of books and research materials dealing with the art and science of the motion picture, with special emphasis upon the informational film.

Flory is a native of Cleveland, Ohio. He was graduated from Yale University in 1932. He is a former member of the editorial staff of the Scripps-Howard daily newspaper, THE CLEVELAND PRESS.

As a lecturer, he has instructed on television and motion picture techniques at the University of Southern California, New York University, Western Reserve University, Boston University, and the Cleveland Museum of Art.

Flory was the editor of an important book in the business film field based on the first survey of its type concerning production and cost data of advertising and public relations motion pictures. This publication, "The Dollars and Sense of Business Films" was published by the Association of National Advertisers, Inc. Recently, he collaborated on the book, "Graphic Communication and the Crisis in Education," published by the National Education Association.

He is a member of the Society of Motion Picture and Television Engineers; Past Chairman of the Audio-Visual Committee, Association of National Advertisers; member of the Committee for Radio and Audio-Visual Education, National Council of Churches of Christ in the U.S.A.

THIS WAS AWARDS NIGHT AT BEVERLY-HILTON

Cindy awards "presenters" were past presidents Bob Gunther (l) with his teammate, Bob Scott.

Charles Strang, Douglas Aircraft executive, was the recipient of Cindy for "Corrosion in Aircraft"

Writer-director Saul H. Jacob[illegible] ceived a Cindy award for A[illegible] General's prize-winning entry.

THE TWELVE TOP films of the Industry Film Producers' year had their hour of glory in the International Ballroom on Saturday evening, June 16th, with past presidents Bob Gunther and Bob Scott doing the presentation honors.

Preliminary balloting for this year's winners took place at the Hilton on two preceding evenings as entries were voted into "First" and "Finalist" honors by members at these screenings. The Air Photographic & Charting Service took "majority" honors with four citations in First and Finalist categories. This year's films reflected concentration on serious *purpose* with a definite trend toward important internal use within the individual companies and groups for whom they were created.

The contributions of all members of producing units is acknowledged in this Awards' report as full credit is given to individuals and to contributing organizations who helped achieve award honors. Top executives of several companies accepted awards this year.

And here's "Cindy" coveted symbol of industry film excellence.

Training Films

(Training Division)

FIRST AWARD

"Corrosion in Aircraft"

Produced by: Douglas Aircraft Company, Inc.

Production Supervisor: J. R. Gabrielson

Director: Gerry Muller

Writer: Ed Lyon

Cameraman: Dick Schwartz

Film Editor: Don Bates

Technical Adviser: Commander Robert McIntoch (USN)

Sound: Ryder Sound Service

Art Direction and Animation: Gerry Muller & Royal Titles

Award Received by: Charles R. Strang, Deputy Director of Engineering and Product Development, Aircraft Division, Douglas Aircraft Company

FINALIST AWARD

"In Your Hands"

Produced by: United Airlines, Education and Training Department

Producer-Director: Ira Thatcher

Writer: A. W. Orton

Cameraman: Ray Hollingsworth

Film Editors: Ira Thatcher and Ray Hollingsworth

Technical Advisers: Dr. G. J. Kidera and Dr. E. A. DeMar

Sound: Dr. Kidera and Ray Hollingsworth

Music and Recording: W. A. Palmer Studios

(Orientation & Indoctrination)

FIRST AWARD

"Korea-Battleground of Liberty"

Produced by: Air Photographic and Charting Service (MATS) 1352d Photo Group, Lookout Mountain Air Force Station, Hollywood, California

Director-Producer: Wilbur T. Blume

Associate Producer: Hong Sung Ki

Writer: Wilbur T. Blume

Cameraman: George D. Wood

Film Editor: Edward Schroeder

Technical Adviser: Lt. Colonel Bishop Kilgore

Sound: Lee Kyung-Soon & Russel Kast

Music: William Lavender

Art Director: Im Myung-Sun

Project Officer: Captain George O'Brien, USNR.

Command Representative: John Broger, Dept. of Defense

Actors: Kim, Chi-Mi, Choi, Muryong and Mark Tapscott

Award Received by: Wilbur Blume

FINALIST AWARD

"Principles of Reliability"

Produced by: The Martin Company, Baltimore.

Production Supervisor: William F. Romeike

Direction: Marvin Fryer and Irvin Milner

Writer: William F. Romeike

Cameraman: Herbert Hyles

Film Editor: Richard Laitener

Technical Adviser: Paul I. Zorger

Sound: Jack Clink

Music: National Symphony Orch.

Award Received by: Dr. Dan Schiavone, Director of Reliability, The Martin Company, Baltimore.

Out-Plant Production

FIRST AWARD

"The Persuasive Push"

Produced for: Electro-Optical Systems, Inc. by Technical Communications, Inc.

Executive Producer: Leon Vickman

Writer-Director: Christopher Bristol

Cameraman: David Blewitt

Film Editor: Christopher Bristol

Technical Adviser: David T. Treitel, Electro-Optical Systems, Inc.

Sound: David Blewitt

Music: Christopher Bristol

Animation Planning: Harold Willard

Art Director: Fritz Miller

Award Received by: David T. Treitel, Manager of Information, Electro-Optical Systems, Inc.

FINALIST AWARD

'Aerospace Force Communications — The Reins of Command

Produced for: The Air Photographic & Charting Service (MATS) 1365th Photo Squadron, Orlando, Florida

Production & Direction by: Filmaster, Inc.

Writer: William A. Holmes, 1365th Photo Squadron

Director, Live Action Photography: Lewis Kramer, Filmaster, Inc.

Story Board by: Lou Terrizzi, 1365th Photo Squadron

Animation: Graphic Films

Award Received by: Captain Robert King, 1365th Photo Squadron.

HEADLINERS AND HIGHLIGHTS FROM THE ANNUAL CONFERENCE PROGR

Basil Wright, famed British documentary producer, addressed general session of the Convention.

Mitre Corporation's Jack Smith discussed the problems of "Staffing the In-Plant Film Unit."

Robert Nichols, Financial Editor of the Los Angeles Times, cited films' importance to the businessman.

IBM's Josef Bohmer showed of single-system film recordi intra-plant use.

Ralph Sogge, of Magnasync, demonstrated his company's remarkable Data Card Presentation System.

Stuart Cooney, Systems Development Corp., cited "Effectiveness of Multi-Screen Presentation."

Lt. John Bigham, Los Angeles Police Department, told of film's role in crime investigation.

Frank Weikel's presentation o ware Valley Chapter's film down the house . . .

People and Events at Program Sessions:

(CONTINUED FROM PAGE 37)

es and abstracts of the various technical papers will be featured in subsequent issues of this IFPA JOURNAL section.

Professional in-plant communication problems were the subjects of critical analysis and evaluation in individual presentations and panel discussions. Jack Smith, MITRE Corporation, reviewed the intricacies of personnel selection and classification involved in the staffing of the in-plant unit.

Josef Bohmer of IBM described the manner in which single-system film recording techniques could solve complicated intra-plant workers communication problems.

Other well-received technical papers were presented by Ralph Sogge, Magnasync Corporation, on his company's "Data-Card Presentation System" and by Stuart Cooney, System Development Corp., who spoke on "Utilization and Effectiveness of Multi-Screen Presentations."

Robert Nichols, Financial Editor, LOS ANGELES TIMES, g views on "Film and Comm tion in the Nation's Busines John Bigham of the Los A Police Department presented ceptional paper on "Film in Investigation."

The closing session on day's program in the Hum auditorium was devoted to discussion, "The State-of-t

Audience interest was keen at the morning panel discussion of "In-Plant v.s. Out-Plant" production. In-Plant participants below are (l) William Brose; (r) Edward Hunter, both of North American Aviation.

A Word of Appreciation

☆ The excellent arrangements for IFPA's technical sessions on the UCLA campus merit this word of appreciation to our Conference Host, Dr. Franklin D. Murphy, Chancellor of the University of California, Los Angeles, who made these facilities available.

d Circuit TV panelists pictured at Convention session are (l to r: rd Tumin, Autonetics; Rudy Bretz, UCLA; Fred Butcher, U.S. Naval al School; and Dr. Bruce Birchard, Hoffman Electronics.

Coordinator for the National Conference again this year was John W. Gregory (at left above) with two of his able assistants. Sponsor Jules Leni, Comprehensive Service Corp. is at the extreme right.

These Sponsors Aided the Arrangements for This Third Annual Conference

☆ IFPA's "man-behind-the-scene" was the able Coordinator of this National Conference, John Gregory. Giving him full support were numerous donors of the many incidentals that helped make this a successful meeting. Among the sponsors were:

Mobile Videotapes, Telefilm Corp. and Comprehensive Service Corp. who hosted the buffet dinner. Sterling Movies USA provided coffee and rolls for meeting breaks. Friday's barbeque was aided by Glen Glenn Sound, Magnasync and General Film Laboratories.

Bernard McNulty and Trudy Bowen glimpsed at a program break.

—And These Hosts, Sponsors

Cocktail hosts were Paramount Television, Houston Labs, Truline Studios and John Seeley Associates. Table wines at the Awards Banquet were provided by Color Reproduction Company.

Programs were contributed by Hollywood Film Enterprises; signs by Hollywood Film Co. Convention brochures were underwritten by S. O. S. Photo Cine Optics and the Jay Gordon Memorial Award and Honorarium again came from Gordon Enterprises.

These Were Door Prize Donors

Donors of door prizes included: Arriflex, Capitol Records, Consolidated Film Industries, Remington Rand Univac, and Vicom, Inc. Ralke Company, Inc. furnished all a-v equipment.

Note to Members About Editorial Contributions

☆ All copy and pictures should be submitted to your Chapter Chairman, who will forward it to me.

The material will then be edited and forwarded to BUSINESS SCREEN Magazine.

In this way we will have our own "magazine within a magazine," providing us with an internal forum as well as a showcase to the nation.

O. E. Patterson
Editorial Vice-President

"The Costly Crowd" stresses the obligation of thoughtful citizens to recognize problem of over-population and to act toward the solution.

Films Present Case for Family Planning; the Problems We Face in Over-Population

Planned Parenthood Federation Suggests Answers in Two Films

EXPLOSIVE WORLD POPULATION growth has been matched in these United States since World War II. The results, both here and abroad, often leads to unemployment, slum conditions, jammed streets and highways, bankrupt welfare agencies, short-day schools and overcrowded hospitals.

To many, deep-rooted religious custom makes discussion of the problem intolerable but to members of the Planned Parenthood Federation of America, the situation calls for greater emphasis on family counselling, for "open skies" policies on these problems.

To make its views known, the Federation is using two dynamic motion pictures, both produced by Parthenon Pictures of Hollywood. The first of these, *Fair Chance*, is a 14½-minute tool for family planning counsellors, is used primarily in affiliate offices and at group meetings.

In an editorial, the PITTSBURGH POST GAZETTE said, *Fair Chance* brings home to the viewer the need to preserve every child's birthright — a warm welcome into a capable, healthy and loving family. We hope this excellent film gets the wide audience it deserves."

The second and most recent of the Federation's films is *The Costly Crowd*, a 24½-minute color subject that presents the dangers of over-population vividly and concisely. Unchecked population growth, the film points out, can undermine our economic health, our social and political stability and our individual well-being.

This is *fact* film. It displays no hysterics but is a true documentary of current problems, actual conditions. It was not necessary to stage teeming slums, jammed expressways, overcrowded and understaffed hospitals or destitute families. The cameras simply rove a typical American city to picture the points graphically made.

The Costly Crowd has a "story" format as businessman John Clinton undertakes his task as head of a Citizen's Master Development Committee. His original concept that more people mean more business is drastically altered as he takes a closer look at the effects of population growth. Family planning, with its attendant counselling, research and educational efforts, appear to provide an important answer. Community leaders can contribute to these needs and help find an answer to *The Crowd*, the film concludes.

This couple seeks counselling on family planning in "Fair Chance."

What does the future hold small boy in a crowded ho scene from film, "Fair Chanc

Prints of both films are able on a sale basis through P non Pictures; preview sho can be arranged through loc filiates of The Planned Paren Federation of America.

Unchecked growth of low-income families can bring more urban slums.

A Schering Film on Mental Illness in H

☆ *No Man Is a Stranger*, a 29-minute color film documenting the history and treatment of mental disorders in Haiti, has been made available to professional groups by Schering Corporation.

Photographed and directed by Erica Anderson, an Academy Award-winning photographer of the biography of Albert Schweitzer, *No Man Is a Stranger* is a vivid description of mental health problems in Haiti prior to and following the construction of a modern psychiatric institute. Funds for the institute were provided by Schering and two other pharmaceutical companies.

The Haitian project was undertaken to improve the care and treatment of the mentally ill, and to determine if minimum hospitalization and maximum reliance on drug therapy would prove practicable in underdeveloped areas. Two years in the making, the film demonstrates the significance of drug-oriented therapy of mentally disturbed persons.

The program was conceived in 1958 by Dr. Louis Mars, a psychiatrist who is now Haitian Ambassador to the United States and Dr. Nathan S. Kline, director of research at Rockland State Hospital, Orangeburg, New York.

No Man Is a Stranger was supervised for Schering by Audio-Visual Manager Bernard I. Sherman. It traces the progress of three mentally ill Haitians who leave the primitive, woefully inade "asylum" in a remote part country to enter the ultra-m Psychiatric Institute of Po Prince.

Since the opening of the tute, an average of 500 p a year have received drug th Most were hospitalized for few days or weeks.

The Haitian experiment cates that the majority of m ill patients treated with drug apy respond well enough no to be kept out of mental i tions, but also to return to p tive activities.

Dr. Kline suggests that general practitioner become ter acquainted "with the c unities for early treatment possible by drug therapy. I assume a major role in a vi early treatment program ai reducing psychiatric hospit missions. He has the first tunity to observe and tre early signs of mental illnes"

No Man Is a Stranger sh of interest to general practit psychiatrists, and members ed professions. As a teachi it is recommended for medi dents, interns, residents, nur cial workers, psychologist others interested in medic social problems of underde nations. It is available to sional groups from the S Audio Visual Department Morris Avenue, Union, N.

eauty through the seasons at YOSEMITE

COLOR PORTRAIT OF AN AMERICAN HERITAGE

HERE IS BEAUTY and also important purpose in this new- and best of cinema portrayals Yosemite National Park, titled *emite Is My Home*, produced Cate & McGlone, and symbol- in these words by a Park Serv- Ranger:

What I like best about Yose- is that it is a symbol of our tage of a land which our fathers ht to subdue and and handed as a sacred trust. Speaking everyone who lives in this ley, I'm sure we're proud to be bers of a group dedicated to preservation of that heritage."

ow in a period of expansion rebuilding to handle ever-in- sing millions who visit our onal Parks, the Park Service is ging a valiant battle to main- comforts, and to also retain the natural scenic beauty of these lands, like Yosemite. Extreme conservationists would meet the problem by closing the trails, limiting tourism. So, this picture has a dual purpose:

Sponsored by a privately-financed concessioner, the Yosemite Park & Curry Co., it *most adequately* shows how this company has worked together with the Park Service to protect and preserve this priceless scenic heritage.

Another important mission of the picture is to induce the traveler to visit Yosemite "off-season" in either autumn, winter or spring. Following the cycle of the seasons, in Ektachrome, the film portrays the Park in the glowing colors of the fall . . . in the chaste white beauty of winter . . . and, finally, in the most glorious season of all . . . the return of spring.

Sequence by sequence, this eye-filling visit to Yosemite shows all of its beauty from granite cliffs and plunging waterfalls to the giant sequoias. The focus is on wild life and flowers; the lens pans along high mountain trails with their breath-taking vistas. To film this story, Cate & McGlone made nine separate photographic trips to the Park between September, 1960 and February, 1962, including trips with horses and pack animals to remote areas. Two helicopter flights were made over the Valley for spectacular close-up views of cliffs and waterfalls.

Yosemite Is My Home was scripted by Ted Cate; photographed by Ed McGlone. Original music by Gene Kauer and Douglas Lackey adds much to its memorable visuals. Sound recording was by the Todd-AO Studios.

UMER: clear, sunny days, cool nights typify this season at Yosemite. Hotel hahnee is in foreground; famed Half Dome looms in the background.

UMN with its glowing colors of n, oak and sumac, in film.

SPRING: the waterfalls and flowers reach their peaks during the run-off season. Yosemite Falls, in background, tumbles 2,425 feet.

WINTER: and Yosemite's higher elevations are blanketed with snow which attracts thousands of skiers to slopes at Badger Pass.

Profiles of presidents, hewn from the Black Hills, are pictured in "Horizons West" one of many films distributed by Modern Talking Picture Service.

Films' Role in State Promotion

States, Cities and Historical Sites Find Screen Medium Ideal Vehicle to Encourage Tourism, Woo New Industries

SPONSORED FILMS continue to play a growing role today in promoting the reputation and economic development of states by attracting tourists, industry, new residents and by increasing commerce generally.

In seeking a more active and wider economic base for business activities, the objective of state promotion is two-fold. It first embraces the welfare of individual residents who profit from a higher level of tourist trade and wider markets for products. Secondly, state treasuries stand to profit from taxes, fees and other business tariffs as travel and commerce increase.

States Increasing Film Use

Why are state governments and their agencies continuing to give films a larger role in their promotion plans? For one thing, the film medium is ideally suited to areas of promotion most important in state promotion plans.

Long recognized as an ideal medium for the travelog, film gives active and vivid illustration of travel and vacation opportunities. Audiences react to situations in which they see how other people enjoy these opportunities. Through film the state can graciously extend a friendly welcome.

That a "friendly welcome" is a prime objective is clearly demonstrated in a recent promotion of South Dakota's new film presented by its Department of Highways under the title *Horizons West*. In announcing availability of the movie to television stations, the distributor summarized film content in saying: "It takes this film 13½ minutes to show your TV audience that the 'Sunshine State' is also a state of hospitality."

Show Advantages to Industry

A second function of state film promotion is extending hospitality to business and industry for relocation. In addition to showing the geographical and physical advantages of industrial relocation within a particular state, films also promote additional attractions to business, such as a ready labor supply, favorable community conditions and progressive state government.

For products, films highlight the people, places and conditions of their origin to create an identity exclusively their own.

An equally important factor in the growing role of films for state promotion is their ability to de-

Hong Kong's harbor is shown in "A Million Lights Shall Glow."

"Film distribution provides unique flexibility in selection of audiences for travel . . . or relocation"

liver maximum results per promotion dollar. Here is where film distribution provides unique flexibility in selection of audiences with potential for travel, relocation or consumption of products of a particular state. Thus, by making film circulation as highly effective as possible in reaching their own particular "markets," the states manage to get effective and economical results from each film expenditure.

Can Meet Special Situations

Still a further advantage for state governments is film's ability to convey a variety of different information and moods. Sometimes there's a public relations objective to be reached. More often, there's a promotional purpose that must be approached with good taste and tact. The number and variety of films under state spon-

In "America's Williamsburg" the drama of U. S. history unfolds.

sorship today attest to the medium's capacity to fulfill these and other roles.

The use of films by the states dates back to the early history of sponsored films themselves. Yet, the effective use of film is by no means limited to states with long experience. Alaska skillfully communicates with tourists in *Alaska, the Friendly 49th*. One prime target for its message is the vacationer who yearns for adventure in a modern pioneer state. Alaska selects a natural audience area in west coast states in offering the film for showing by television stations in the Pacific region.

Television has no monoply on the state-sponsored film, however. Some states combine both television and non-theatrical distribution for sound reasons and get excellent results. Kentucky, for example, followed this formula in promoting the splendor of its Bluegrass country with *Kentucky — Vacation Wonderland*. The film has had a controlled circ tion in eastern states within rea able travelling distance of tucky.

Kentucky followed a similar tern for a second film, *Invit to Industrial Kentucky*. Her prime audience was a select among management of indus likely to relocate within the Yet, the state sought wide d bution through television and munity audiences. An impo secondary objective: to show agement not only the advan of locating business in Kent but also to illustrate the o tunities for good living as in the Blue Grass State.

Michigan Bids for Touris

East, west, north or south states find it easy to selec tractions that serve as good material. The Michigan T Council turned to the state's lakes and beautiful scenery three colorful films. *Fishing in Michigan* was produced to anglers to field and stream w the state. *Michigan — Water derland* had audiences of general interest. For prom of tourist business from su into fall, the Council filmed *M gan — Autumn Wonderland*. all three promote tourist they have been distributed w to non-theatrical and tele audiences within north c states adjacent to Michigan.

New Hampshire is another with multiple film promotio portunities. The State Re tion Division sponsors *Winte in New Hampshire* and *Ho Unlimited*. The Division of omic Development promote state's beautiful New En scenery with *It's Autumn in Hampshire*.

Aim at East Coast Viewe

Both government agencie non-theatrical distribution an mostly adult audiences in coast states. In addition White Mountains Recreatio sociation gives further supp state promotion with a co film titled *The White Mou of New Hampshire*, for tele and non-theatrical audienc east coast and some north c states.

Kodak
TRADEMARK

8mm sound movies sell giant machinery *before it's built*

Mr. R. E. Morton, Executive Vice President, Morton Manufacturing Company, uses a Kodak Sound 8 Projector to add his voice to the sound track of an 8mm movie made in his plant.

ing ideas for custom machine tools, materials g equipment and other custom industrial ery by talking from blueprints and models oo much to the prospect's imagination, ac- to the Morton Manufacturing Co. of Mus- leights, Michigan.

d movies, they felt, could show more and tell n a more understandable way. *But what osts?*

they heard about the new Kodak Sound 8 or—the portable machine which has raised 8mm movies from a home hobby to a prac- ol for industry.

the Sound 8 Projector, Morton could: 1) eir movie-making costs low; 2) add their own sound to the film and change it at will by using this projector's built-in recording system; 3) be sure of a professional movie presentation, since this projector enlarges tiny 8mm movie frames to fill room-size screens with optimum detail and definition and plays back with excellent sound quality.

Make movies themselves

By photographing scale action models and piecing this film footage together with scenes of actual working machinery of designs similar to those they want to demonstrate, Morton can assemble a very informative movie.

Then comes the sound. Voices, machine noises on location, even background music are first tape-recorded, then transferred to the 8mm film magnetic sound track through the Kodak Sound 8 Projector recording system.

The Sound 8 Projector works like a tape recorder, even has its own microphone. Recording, erasing, re-recording (a different sound track for each audience, if need be) is simply a matter of "recording" while projecting the film.

Morton keeps a Kodak Sound 8 Projector in offices at Philadelphia, Muskegon, and San Francisco, so that demonstration films can be shown at every opportunity.

If this example gives you ideas, call your Kodak Audio-Visual dealer for a demonstration, without obligation, of the Kodak Sound 8 Projector and its low-cost movie potential.

Kodak Sound 8 Projector 〉 **EASTMAN KODAK COMPANY,** Dept. 8-V, Rochester 4, N. Y.

States on the Screen:

(CONTINUED FROM PAGE 46)

mont. It makes this title available to television stations in Toronto, New York, Washington, D. C., and Chicago. An additional communications vehicle for the Green Mountain State is the Mt. Mansfield Company's color movie *This is Stowe Without Snow*. Its purpose is to sustain tourist trade the year around. It is for non-theatrical audiences in northern east coast states.

Maine is among those states which tell a product story with film. In *Better Seed*, the Maine Department of Agriculture explains the state's natural advantage in growing a hardy potato seed. The film story is directed to schools and adult audiences in rural areas.

Idaho Shows Nutritive Bean

In Idaho, the Idaho Bean Commission has promoted its own special ability to nurture the Idaho bean with *Sun, Soil and Water*. Here the objective is to illustrate the benefits of the Idaho bean as a nutritional aid to health. The Commission has told its film story to national audiences through both non-theatrical and television outlets.

Promotion of the tourist trade is not forgotten for the product story in Maine, however. There the Rangeley Lakes Region Chamber of Commerce has filmed *The Rest of Your Life* to preview the scenery, fishing, camping, cookouts and water sports offered by the state. The film is available to non-theatrical and television audiences in northern states along the east coast.

Visit to Colonial Williamsburg

America's history and heritage are combined in a film intended to stimulate travel within Virginia's borders. It is told in a colorful illustration of former customs and habits of *America's Williamsburg*, sponsored by Colonial Williamsburg for audiences in states east of the Mississippi.

In somewhat similar treatment, the Greater Boston Chamber of Commerce has filmed *Boston: City of Yesterday and Tomorrow* for non-theatrical audiences. On international levels, you also find film promotion focused upon metropolitan attractions. The Hong Kong Tourist Association has *A Million Lights Shall Glow* for adult audiences interested in travel in the East.

Spectator sports provide strong subject material for the films of many states. In New Jersey, the Monmouth Park Jockey Club addresses turf fans among non-theatrical audiences in Atlantic Coast states with *The Best in Racing*. The club's other film, titled *The Thoroughbred*, has illustrated racing thrills at Monmouth to television audiences in states as far west as the Mississippi. Still another New Jersey film on horse racing is *Racing Planned for Pleasure*, a title offered to non-theatrical and television audiences within nearby metropolitan centers by the Garden State Racing Association.

North Carolina shows the attractive scenery of Chimney Rock Park in another film based on racing — this time with sports cars. Sponsored by Chimney Rock Park, it's titled *Motorized Mountain Climb*. Sports car fans in southern states comprise its non-theatrical audience.

The Wide World of Sponsored Pictures

Day-to-Day Use of Silicones Shown in Dow Corning Film

☆ Wherever you look in the modern households, silicones act as hidden servants as they protect utensils, appliances, fabrics, beauty, automobiles or the house itself.

To increase the awareness of the important role that silicones play in modern, everyday living, the Dow Corning Corporation, Midland, Michigan, has produced, *Modern Living With Silicones*. Filmed in color, the 13 minute film points out to homemakers and home economists the usual day-to-day role of silicones and also some of the unusual applications.

Modern Living With Silicones is being distributed by Dow Corning Corporation, and for television showings, through Modern Talking Picture Service.

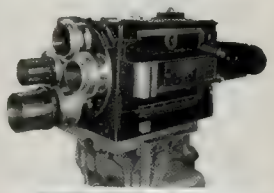
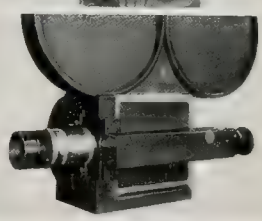
REFLEX BREAKTHROUGH* BY CECO!



CAMERA EQUIPMENT CO., INC.

NOW ENJOY ALL THE ADVANTAGES OF REFLEX SHOOTING WITH AN EYEMO, MITCHELL OR BELL & HOWELL STANDARD CAMERA



REFLEX SHOOTING of any subject is sure and certain, as every cameraman knows. Because you see the actual image formed by the taking lens itself, there's no doubt about focus, depth of field or freedom from parallax error; and no need to rack-over the camera.
Today, after years of intensive research, development and testing, CECO has perfected a unique Optical System* worthy of these fine cameras. Many CECO-converted units have already been tried and proven in major film productions.

EYEMO. If you own this excellent instrument, in its standard 100-ft. capacity, spring-wound form, we can convert it to full reflex operation at reasonable cost. Or we can supply the entire camera, complete with CECO conversion. We can also supply it equipped for external magazines and motor, as well as the reflex conversion.

MITCHELL 35mm. Standard, Standard Hi Speed, or NC, with either single lens without turret, or with 4-lens turret, are all equally adaptable to CECO conversion — the ultimate refinement of superb professional equipment!

BELL & HOWELL 35mm. MODEL 2709 can be equipped with the CECO Reflex Modification.

Reflex conversions can also be made to many other cameras.

ALL CECO MODIFICATIONS include a full (silent) film gate aperture and ground glass, and a removable academy (sound) matte in the finder system. A TV frame with center cross is etched on the ground glass. The image viewed is magnified about ten times in the Eyemo — ten and twenty times in the Mitchells and Bell & Howell Model 2709. Under most shooting conditions, no exposure compensation is necessary — yet the image you view is clear and bright even when the lens is stopped down substantially.
For full details on this great new advancement, stop in and see us, if possible — we'll be delighted to discuss it personally. Otherwise, please write us for data, literature, and prices.

Peter Comandini is President at Telefilm, Inc., Hollywood

☆ Peter Comandini, who formerly held the post of secretary-treasurer, has been elected president of Telefilm, Inc., succeeding the late J. A. Thomas, one of the organizers of the Hollywood-based service organization for producers and film-users, and its president since 1938.

James B. Pinkham continues as executive vice-president of Telefilm. Melrose V. Thomas, widow of the former president, was added to the board of directors, and was elected treasurer of the corporation. Marvin Sears was named secretary.

Portrait of Children and Music in Japan

☆ Pablo Casals appears in *Happy Children of Japan*, a new 16mm film which is being distributed on a free-loan basis by Sterling Movies U. S. A.

The world-famous cellist addresses a children's 300-piece orchestra after a special concert they played for him while he was in Japan. Visibly impressed by the fact these youngsters have all been educated in music since infancy, Casals points up the revelation that proficiency is not limited to those with apparent "inborn gifts" of talent. The movie demonstrates that through consistent training, all children can — and "deserve the opportunity" — to develop their individual talents for a refined heart and mind.

Documenting how a child normally learns to adapt to his native environment, the film also shows that tots even under one year of age can acquire the essence of cultural knowledge and then gradually increase their talent with time and practice. A highlight of this demonstration is presented with scenes from International Children's Day, which was held in Tokyo.

An Orchestra of Thousands

Thousands of youngsters from many lands are seen simultaneously rendering a classical composition with violins and other musical instruments. This harmonious achievement is in token of the peace and good will which can be extended to all peoples of the world through the universal language of music. It also lends evidence that "every child has been born with high potentialities."

Delicately and warmly photographed as through the eyes of children themselves, the film also blends the work of Bach and Mozart into its musical background.

Famed cellist Pablo Casals in "Happy Children of Japan."

Babies are first seen listening to recorded music being constantly repeated over a 5-month period of time. As small children, they are next instructed in the simple techniques of playing some musical instrument. They then begin practicing in groups on one instrument at a time until everyone contributes to a perfect performance. Tape recorders are used to enable each child to develop a "critical ear" for music which, in turn, improves his own playing.

A Center for the Talented

Most of the scenes were filmed at the Talent Education Research Society in Japan. This educational institution is renowned for its advanced teaching methods. Shinichi Suzuki, who serves as president, is seen instructing some of the school's special violin classes. It is his theory that innate abilities develop according to the training given them, and his film forcefully testifies to the effectiveness of the Suzuki doctrine.

Directed by Yoshitsuga Kono in Tokyo, *Happy Children of Japan* is 23 minutes in length. It was produced this spring through the auspices of Hitachi, Ltd., Japan's largest electrical equipment manufacturer.

ew Panacolor Process Unveiled to Press

m Color Prints Are Made on Black & White Positive Film

ACOLOR, INC., which since 57 has been occupied with ration and development of ods and equipment, now is set rn out in a single working day 00 feet of 35mm exhibition s in quality color on low-cost, rain black-and-white positive . With installation of three processing units to be com- l by year's end, production ity will go to upwards of million feet of color film a

rmed by principals as "the major breakthrough in mo- picture color printing since the olor process was introduced century ago," the Panacolor vement was announced late ne by Harry E. Eller, presi- of the company, at a press rence, screening of sample and a tour of the Hollywood y.

ee B & W Master Negatives

cedure at the newly-operat- boratory starts with making separations as three black- hite negatives. After pre- on of mats and running test for color balance, produc- tion printing is a continuous process. A single machine takes in black-and-white positive at more than 200 feet a minute, and some 55 minutes later delivers a finished natural color print at the other end, ready for use immediately after its careful inspection.

In between, the print stock is exposed to each of the three continuous loops of negatives. Chemicals are applied to the film surface in thin, viscous layers which subsequently are washed off. The resulting color consistency, Eller pointed out, is impossible to maintain in the liquid baths of other color film processes.

Economics in Operation, Stock

The economy of Panacolor's original and exclusive technique, which supplements the savings gained with use of black-and-white positive stock, comes with the single continuous operation principle. Before it was achieved, Eller explained, registra-printing required intermittent "step" printers. Speeds were limited to less than 50 feet a minute because the final color print had to be registered separately, frame by frame, from three color-sensitive negatives, as the only guarantee of faithful color registration in release prints.

Performing in the economical manner of printing ordinary monochrome, it was said, Panacolor is "geared to split-hair accuracy in its registration and reproduction in natural color of the images from three black-and-white negatives."

Well-Organized Technical Staff

The new laboratory has a well-organized staff of experienced technical people, and full facilities for formulating and mixing chemicals, for maintenance of equipment and for development work. Electronic devices and controls are used extensively in the processing operation, as well as in maintaining temperature and humidity at close tolerances.

Applicants are asked to address listing form requests to the Chicago office of BUSINESS SCREEN at 7064 Sheridan Rd., Chicago 26, Illinois, U.S.A.

How Modern Serves the Canadian Audience

Keen Interest of Sponsors, Viewer Neighbors to North Noted by Bill Oard of Modern Talking Picture Service

IT WAS ABOUT two and a half years ago that my company arrived at the decision to open a branch in Canada. For nearly twenty-five years we had been successful distributing the films of American industry within the United States. Now we wanted to see what would happen when we tried to export our know-how.

BUSINESS SCREEN readers may be interested in this brief report of what has happened in the fourteen months since we first opened our doors. We've learned a lot, made some good friends, and believe we are well along the road to a healthy and profitable operation.

Many Groups With Projectors

We knew from various sources that many Canadian groups were equipped with 16mm sound projectors, and we were hopeful that the 67 TV stations would be as ready to use business sponsored films as are stations in the U. S. We knew, too, that some of our American customers could authorize us to release their films in Canada, although we realized that we must look to Canadian companies for the bulk of our business. As far as we could determine, there was no distributor in Canada devoted exclusively to business film circulation, and we believed the time was ripe for such a development.

After investigation, discussion, and a good deal of thought, we settled on Toronto as the site of our new branch. Montrealers quite naturally feel this was a mi... while Vancouverites often pr... never to have heard of either ... ern city! But, we had to start s... where. We hope the day will ... arrive when volume permits ... point operation.

rdian programs. Allowances made for British Commonh programs.

spite this, we have found acceptance for non-Canapictures, although there is a te preference for films bearBBG Canadian content num-We have visited about half ations so far, and several catges have been published and d. We are now shipping 400 films monthly to sta-

00 Requests in Three Weeks

veral mailing lists were purd to develop film showings g private audiences, and an 20,000 catalogues were reil. We were overwhelmed by film orders in the first three s! This was enthusiastic acnce, from people who didn't us, and whom we weren't even had projectors. As a r of fact, many films were letely booked for several s. Current volume is about shipments monthly to group rs.

r branch in Canada is headed ruce Thomas (formerly in e of our Cincinnati office) as al Manager. Thomas is reible for new business and customer service. John Brown is in charge of operations, and a staff of four handles audience promotion and film traffic.

There are, of course, many more things to be done before the new venture can be termed a success. But the results so far indicate that there is a definite place in Canada for a commercial distributor, specializing in business film circulation, and committed to the development of motion pictures as a regular communication medium for industry. With current interest in the European Common Market, and occasional talk of a North Atlantic Common Market in the far future, we believe that our move was well timed, not only for immediate profit, but as a valuable background for possible future efforts further afield.

Avon Celebrates 75th Year in Film Guided-Tour of New Lab

☆ Avon Products have celebrated their 75th anniversary with the opening of their modern, new laboratory at Pointe Claire, Quebec—and a motion picture to take the public on a "camera's eye" visit there.

The camera moves through various departments of the Avon Laboratory showing how substances are gathered and then developed and tested. Also the processing of orders is covered, as is Avon's unique distribution system which makes Avon products available right in the home through the popular "Avon Calling" service. The film was produced by Crawley Films, Ltd., Ottawa.

Cinema Research Announc 8mm Reduction Print Ser

☆ A new service to prod offering 8mm reductions fro mm and 35mm films has be nounced by Cinema Re Corp., Hollywood, Cal.

An exclusive feature of th vice, according to presiden Scheib, is that optical effec be integrated from A and B during the reduction proce is not necessary to blow originals up to 35mm, mak optical effects and then redu film. Both black & white and originals can be printed. Th uid gate process is used to clarity of image and to elim scratches and blemishes o original during printing.

In addition, another exc service is that actual scene-to color, as well as density corre are made possible directly 8mm negative. The final print is made by direct exp eliminating any degradati sharpness which might resul the optical printing process.

Further information about services can be obtained fro company at 716 N. LaBrea nue, Hollywood 38.

Technicolor's "800" Projector.

and the "show is on." While the projector was designed as a repeater rather than for continuous use, it has been used successfully in continuous operation in air-conditioned quarters which minimize the build-up of heat which could in time warp the plastic of the cartridge.

Features of the Projector

The Instant Movie Projector has a precision-ground "Zoom" Technor 5/1.5 lens, fully color-corrected, with 15mm to 25mm range to adjust picture size to fit the screen. Blower-cooled, only 250 watts are required for the brilliant Tru-Flector lamp as a light source. When a change is needed, the hot lamp can be ejected without touching it. The aperture is self-cleaning, and a cam-controlled two-tooth shuttle assures precise registration for steady pictures. An elevation control is located at the rear of the projector.

Weighing only 7 pounds, the compact projector measures 9-¼ x 5-½ x 5-¼ inches. Its convenience is highlighted by the fact that it will fit into almost any expandable-type brief case. To meet special needs, the Technicolor staff has on occasion made fast modifications such as the flip-top rear projection unit shown; the projector, held firmly in place in transit, simply sets into the case and may be removed for other uses as required; case space also is provided for Magi-Cartridge storage and transport.

Lab Facilities Are Integrated

With the projector as the foundation for the program, Technicolor has built an organization to handle all phases of business use between the actual production and the distribution of the picture. The Hollywood film laboratories have set up facilities for making the famous Technicolor prints by imbibition — in effect, a dye transfer process — in 8mm, with direct reduction from either 16 mm or 35mm. On runs as short as 100 prints, the order goes through 35mm machines, getting correction

YES
WE ARE
GETTING
SOMEWHERE!

25 years ago only 1 in 7 cancer patients was being cured. Today 1 in 3 is being saved.

With what science knows about cancer right now, *one in two* could be saved by earlier diagnosis and proper treatment. Yet every year more than 85,000 Americans still die *needlessly.*

To learn how *you* can guard yourself against cancer, call your local Unit of the American Cancer Society or write to "Cancer" c/o your local post office.

Warner, Goetz & Brill Co. Established in Los Angeles

• Jack Warner Jr., John Goetz, and Klaus Brill have established Warner, Goetz and Brill as a new company to produce films for industry and for government. Headquarters of the firm are at 11501 Sunset Boulevard, Los Angeles 49. All three participants have had considerable experience in this field.

Klaus Brill, for the past eight years editor in publication departments at Douglas Aircraft and Bendix-Pacific Division, has been responsible for the documentation of commercial and military programs. Assignments have included script writing, directing, producing and editing of progress report films; preparation of operation and service manuals for DC-7 aircraft and a broad range of military projects; and management of all documentation for the Project Mercury Telemetry Receiving and Digital Data Processing systems. In the Psychological Warfare Division of the Army he wrote, directed and produced radio news and feature programs; subsequently he served as Deputy Chief of the Radio Branch of Military Government and program director of the Bavarian Broadcasting System.

John Goetz produced the "Wide Wide World" series for General Motors Corp. and for more than 10 years was on the staff of National Broadcasting Co. as a director, producer and executive producer, gaining more than 300 live and video tape network credits, including "The Voice of Firestone", "American Inventory", the "Kaleidoscope" series, and others. Film production and direction included these documentaries: *Background*, the *People* series, and *The American Fighting Man — Korea Plus Ten*. During

War II he was a captain i
tary Intelligence Service, a
served in the Psychologica
fare Service as Chief of F
tion at Radio Munich.

Jack Warner Jr. former

are you getting your share of this $14 billion market?

It is estimated that the 13 through 19 year old teen age group influences $14 billion in purchases annually. But that's only **part** of the story. Teen-agers have a tremendous buying power today, and many of their buying habits carry over into adult life. That's why sponsors of business films depend upon distribution by Modern . . . to reach young adults in their schools and universities . . . in their churches, clubs and social groups. Contact our nearest **Sales Office** for a free illustrated study of The Teen-Age Market and how your film can be economically circulated to this lucrative and fast-growing segment of the buying population.

Which twin is the duplicate?

If there's any difference between the original and the Anscochrome® "547" dupe shown above, odds are that the Anscochrome dupe is an improvement. "547" gives excellent sharpness *and* contrast values. This high-speed duplicating material gives both large and small volume duping operations high quality with a minimum investment in equipment (you process in regular Anscochrome chemicals). Ask your Ansco Man for complete information about "547".

THIS IS A BEST SELLER...

IT GOES ANYWHERE, SELLS ANYTHING on 8mm Sound Motion Pictures

Whether you sell in a show room or board room, you'll find the Cinephonic Repeating Sound Movie Projector to be the best sales assistant your men ever had.

□

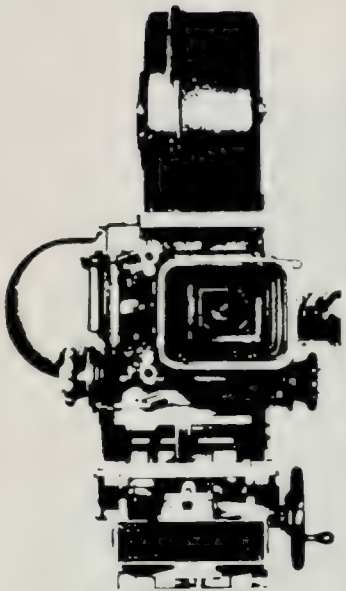
The Cinephonic can show and tell your story at a moment's notice . . . at any point of sale. It weighs just 15 pounds, probably less than your briefcase. You simply pick it up and go . . . to the right prospects in the right place. Show your story to one viewer, a dozen or a hundred at a time.

□

Cinephonic is complete in its own case, even to its screen. It works at the turn of a knob, shows brilliant movies; plays crisp, vibrant voice and music. Your film, in an automatic cartridge replays thousands of times. You can count your cost in pennies per showing.

□

Are you preparing a new film, or do you already have a winner? In either case — see and hear the Cinephonic now. See how your story can reach more of the right people in the right place. It can help you to sell more of what you're selling.



□

THE EDITORIAL VIEWPOINT

SHOEMAKER'S CHILDREN, that's what we are! We're talking about those of us who create and produce communications for business, about the companies who manufacture equipment and films for production and projection and about those who distribute and process the picture. Among all these hundreds of companies, you can count the motion pictures and slidefilms which have been sponsored to sell these media on your 10 fingers and have a few left over.

Where is there *today* a single big picture to punch home the power and the glory inherent in our screen images? Where can a businessman or an advertising club or a board of directors get a print of a picture showing the universality of sight-sound, of the myriad of tasks which only the screen can make understandable so well to so many?

It's What Pictures Can Do That Counts

For the company or the trade group or the Government without the desire to sponsor a picture to solve a problem or to deliver an idea has no use for the lightest, easiest or even the cheapest kind of projector.

True enough, there could be a partial answer in showings of the industry's best "samples," our "prize pictures" of the year, to prospective sponsors. But we waste that opportunity by the vain pursuit of awards for awards' sake. Where is there a single awards program in the U. S. to which you would safely expose a company's president or a board chairman?

Cooperative Action Could Work Miracles

And where is this industry's badly-needed Research and Development program? Where is the organized evidence of pyschological response we began to get during World War II and have since abandoned to the tender mercies of campus audio-visual researchers.

And, finally, where is the overdue UNITY of all those with a common interest in the tremendous potential of sight/sound media now drifting aimlessly their separate ways to the detriment of their own prosperity. Isn't it about time we used our producer organizations, where they exist, to do a little more than negotiate union agreements? And perhaps called on the crafts themselves to think about *the medium* on which their member livelihoods depend?

As the final quarter of the year begins, it's time for those in charge of such matters to *take charge!* The first order of the day is: get together! The precepts are simple enough: *know thyself* and then *sell thyself.*

Let the Picture Medium Sell Its Future

Can these be the few basic objectives toward which the "industry" itself can work together?

1. To emulate the tremendous example of management exhibition *of our own kind of pictures* in the U.S. as will be done at the Third International Industrial Film Exhibiti Berlin this month?

2. To "package" and move toward level audiences throughout the U. S. and ada, the *best* of *management-interest pi* from our respective countries, i.e. to m group of such films easily accessible t management audiences for coast-to-coast ing. Example: the "50 Books of the show annually sponsored by the graphic

3. To weave a pattern of co-sponsors such showings so that local audio-visual ers (the *best!*) can assist in their present

4. To accompany such showings with quality descriptive literature for the gu of prospective clients in these audiences.

5. To work toward the recognition national business film awards program v of judgment by top management peopl of their participation in its final events. all, it's *their* money that pays for the pr

6. To encourage such excellent spec programs as that of the National Commit Films for Safety with its top-level revi its exemplary awards presentation duri tremendous National Safety Congress.

Top Films, New Sources Seen At Assembly

By HOWARD THOMPSON

WITH the recent close of the fourth annual American Film Festival and a big, fine package of prize-winners now available (upon request) as a national "road show," full credit should go to the sponsoring Educational Film Library Association at 250 West Fifty-seventh Street.

Again pilot of the entire operation, which drew a record total of 1,500 registrants to the Biltmore Hotel, was the association's administrative director, Emily Jones. Miss Jones is [illegible] bought[illegible]

(of Clearwater, Fla.). [illegible]roductions

And two tiny masterpieces came from Electra Films of New York, a company expanding from television films into the nontheatrical field. Electra's "Litho" recorded the technical process of lithography in a precise flow of simplicity and beauty; here was a perfect little picture of its kind. "Profits in the Bag" (how to pack a shopping container, no less), sparked by some brazenly sassy animation, was a model of perky practicality.

Other winners, to choose at random, fully justified their acclaim. The plight and rehabilitation of a disturbed adolescent girl was penetr

At Presstime, Belgium Selects Eight Films to Represent Industry at Berlin

☆ The final listing of entries for the Third International Industrial Film Exhibition being held in West Berlin later this month was received from our correspondent Peter Rigg at presstime. Here is his report:

From the heart of the Common Market (for Brussels is the meeting place of the International Executive board of the Common Market nations), Belgium's industrialists and film producers have selected eight of that country's best pictures for showing at West Berlin. Showings in Belgium present a problem for this nation requires two languages, Flemish and French, and the success of a business film depends on the use of the most suitable language. So it is wise to be guided by a local a-v specialist. Here are Belgium's entries:

Construire Mieux, Plus Vite, a Meillur Compte. Sponsor: S. A. Linex a Lauwe. Producer: Cine Centre Multifilm.

Education Gestuelle et Mode Operatoire. Sponsor: Belgium Productivity Council. Producer: Paul Defru.

Even Pauzeren met Sofe en Safe. Sponsor: National Association for the Prevention of Accidents at Work. Producers. Alfons Roggeman / Lode Hendrick.

Faster & Cheaper Manufacturing Methods. Sponsor and Producer: Bell Telephone Manufacturing Co.

Les Dieux du Feu. Sponsor: Steel Information Center of Belgium. Producer: Henry Storck.

The Low Shaft Blast Furnace. Sponsor: National Metal Research Center. Producer: Sofedi.

Spotlight on Telegraphy. Sponsor and Producer: Bell Telephone Mfg. Co.

Your Key to Europe's Commerce. Sponsor: Chamber of Commerce of Antwerp. Producer: Sofedi.

small WORLD

FROM ROBINSON P. RIGG'S VIEWPOINT

ALL OVER EUROPE these recent months there has been a last-minute rush to complete and enter films for the International Industrial Film Festival to be held in Berlin in mid-September. Each national entry must be selected by national selection committees — forecasters say that over sixteen nations will compete this year.

In France last month BUSINESS SCREEN was present at the French National Industrial Film Festival held in Rouen, 80 miles from Paris. Since 1958, Eduard Loraillere has organized the French Industrial Film Festival in this thousand year old town.

French National Entries Chosen at Rouen

☆ This year over 150 businessmen, film producers and admen from all over France viewed 66 films to select the French national entries. The festival was held in conjunction with the annual convention of the French Cinema Exhibitors Association, important because industrial films are often shown in the entertainment movie theaters in France.

Eduard Loraillere, of Rouen, opens 5th French National Industrial Film Festival in the city.

In fact, the distribution of industrial films in France differs from the U.S.A. in many ways. First of all, in spite of the fact that France is the largest country in Western Europe by area, the population is only 46 million and there is really only one commercial, governmental and social center — Paris. Then, too, the French people have different habits — for example, they do not join clubs — and so the club audience, so important to U.S. and British film sponsors — just does not exist in France.

It Pays to Understand French Viewpoint

☆ The selling approach is different too. A French ad man said he was always surprised that so many American sponsored films were aimed at women, with the intention of selling household durables — no one in France would dream of selling a washing machine to the housewife, said he. You must first persuade the husband that it is worth spending his money on such things. Nevertheless, it would be very strange if French housewives did not have a big say in what is bought for the house. But French housewives do not join clubs — and this makes it difficult to reach them thr film.

French schools all work to the same riculum and the same timetable, which m distribution of educational films a tough p osition for the libraries — if the film is cepted for schools, they all want it at the time. If it is not accepted, nobody wan

Nevertheless, three distribution orga tions have solved the problem, each in its way. In our next issue these important ou for film in the heart of the Common M will be fully discussed.

Problems of U. S. Manufacturers in Eur

☆ Stanislaus Faure, who makes instruct films for Otis Elevators in Europe, out some of the problems of operating in Common Market. Otis, who build and i commerical elevators, work through a number of individual mechanics scatte throughout Europe.

The only way they have found to in them effectively about new methods and e ment is to show films on Moviematic (K 16mm rear-view projectors and Beseler's Mate slidefilm equipment.

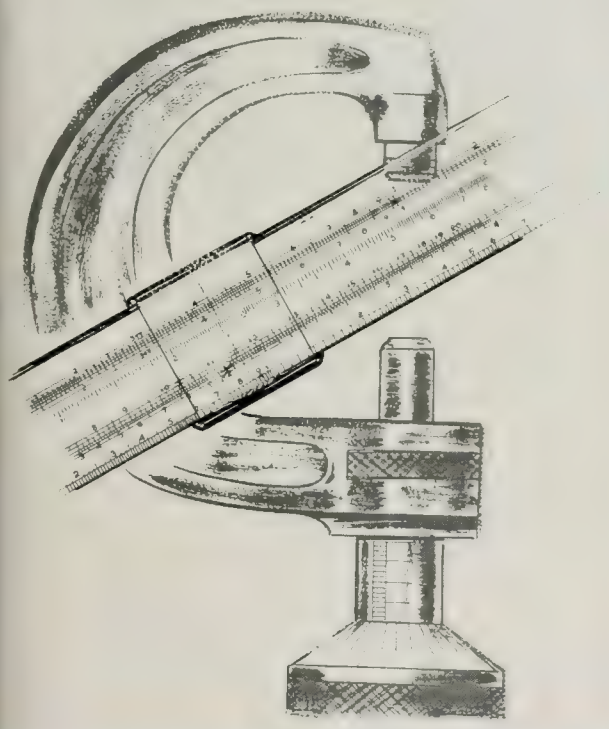
There are a number of American-proc films available from the parent company often European installation practice and lations, particularly with regard to safety sures, varies from U.S.A. So films have produced for each country — in order tha can cut the accident rate and save mone

Incidentally, Faure has been a read BUSINESS SCREEN for many years and heard about the Moviematic and the Mate through our pages.

German Federation of Industries' Group Selects 15 Entries for the International

☆ Across the frontier in Cologne, Dr. Brepohl of the Institute for German Inc was arranging the submission of the Ge entries for the International Festival. Ger like France, Britain, Italy and the U States, will be entering 15 films. The Ge films were selected by a special com set up by the German Federation of I tries and they include some titles which pretty exciting. (See the complete list on 63 of this issue.)

One film which has been widely sho Britain and U. S. A. is *Kahl*, made by Films for the A.E.G. electric company. is the story of the building of the first a plant in Western Germany and is a fine of technical public relations, winning last Grand Prix at the Berlin National Indu Film Festival.



Two other films from the German list Common Market interest in overseas con tion work — *Alvorada*, made for Manne Steel by their in-plant unit, deals wit people and industry in Brazil and *Campo po* (made for the Krupp Organization b ta-Film) describes the building of the Limpo plant, also in Brazil. Krupp ha other film on Brazil, *Antonio*, intended t workers in their Brazilian plant.

Those who remember *The Magic T* film about magnetic recording tape by

PETER RIGG'S COMMENTARY:

(CONTINUED FROM THE PRECEDING PAGE)

A.S.F. Chemical Compay, will look forward to seeing another film sponsored by the company, *Spiel in Farben*. The German entry, like the French, is going to offer stiff competition at Berlin.

Sponsored Films in Germany

☆ Post war sponsorship of films in West Germany did not start until 1950, but since then over 2,000 productions have been released, of which 1400 have been sponsored by industrial and commercial firms, 160 by the Federal and provincial governments and 370 by producers making films on their own initiative.

The majority of the films are sponsored by the chemical, oil, heavy engineering, iron . . . steel, and electrical industries which have sponsored over 40% of all existing films.

Sponsorship in West Germany, as in other countries, does not seem to depend on the size of the company nor on the importance of the industry to the national economy — in fact, only 11 firms in Germany possess libraries containing more than 20 titles.

Some years ago German films were distinguished by the fact that they described factory processes in great detail, even for general audiences. Today the tendency is to make very avant-garde films based on an industrial theme — which are exhibited in the movie theaters. *Steel — Variations on a Theme* and *Technology — Three Studies in Jazz* are typical of these films which rely on *music and pictures only* to present their messages.

Youth clubs, evening institutes, universities, technical colleges, clubs and societies are the owners of about 20,000 16mm sound projectors and these groups account for two-thirds of the non-theatrical audience outlets.

Foreign distribution is carried out jointly by the Foreign Office and the Institute for German Industry. During 1961, 1500 requests for films were received from foreign countries, mostly from underdeveloped areas where the films were shown either by the official German mission or by local authorities. From the film entries for Berlin, it looks as though Brazil and South America are the target for German industrial films next year!

This mobile theater tours member plants of Britain's Production Engineering Research group.

Industrial Training "On the Spot" as a Mobile Theater Tours British Factories

☆ Over 1,000 British engineering firms are members of PERA (Production Engineering Research Association) which carries out research into new production techniques — makes motion pictures about its work — and takes the films to member firms not equipped to show films.

With their own mobile demonstration unit, PERA experts visit the plants to explain the new methods. The unit has a movie theater in the leading vehicle and a demonstration room in the trailer.

Working on the idea that expert instruction at the plant site saves valuable production time and money, over 15,000 engineers in 100 British firms were instructed in the PE mobile unit last year.

These are some of the twenty films saw: *Research into Blanking and Pierc Metal Cutting by Spark; Friction and U sonics* and *Aspects of Automation in Mac ing Operations*.

U. S. firms manufacturing production eq ment will find that European audiences anxious to learn new methods and technic through film — which may even be take the plants, complete with cinema.

"Friendship 7" Is Screened in London

BELL & HOWELL PRODUCTS ARE AVAILABLE IN CANADA THROUGH CANADIAN DEALERS / SPECIALIST AUTOLOAD FILMOSOUND ARE TRADEMARKS OF BELL & HOWELL COMPANY

Before

Finger-fumbling could 'lose' your audience before the show ever began!

After

No 'amateur night' presentations with this automatic 16mm sound projector!

Bell & Howell's new Specialist Autoload Filmosound projector threads itself (no other 16mm sound projector does)! See how this ease and dependability can make your films work more effectively for you!

Threading a 16mm sound projector used to be a finger-fumbling job. Distracting, time-wasting threading delays sometimes destroyed the effectiveness of film presentations.

Now the new Bell & Howell Specialist Autoload changes all that! This one threads itself—sprockets, film gate, sound head and all—automatically! And because threading is precise, film-flutter and off-key sound are also prevented automatically.

In addition, you get all the other advantages of the Specialist . . . light weight . . . brilliant picture . . . reverse . . . single frame viewing . . . rugged Bell & Howell construction.

KALART / VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

There's a lot to like about the way a Kalart/Victor shows your 16mm sound films. Picture quality is brilliant. Sound is superb. Special features provide for simplicity of operation and protection to valuable films. But of all the reasons for choosing a Kalart/Victor, the projector's dependability comes first with most people.

What is there about a Kalart/Victor that makes it so dependable? For one thing, its basic design ensures trouble-free performance with such features as large single drive sprocket, stationary sound drum and self-aligning pull-downs. There's nothing temperamental about a Kalart/Victor. Another reason is the high standards each projector must meet. For example, no Kalart/Victor ever leaves the factory unless it has passed a rigid inspection after 6 hours of continual operation.

Decide now to see your Authorized Victor Audio-Visual Dealer for complete information about the one 16mm sound projector you can really depend on.

Free booklet—"How Industry Profits from Films." Covers use of audio-visuals in every phase of business. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 16V

Recording, Analysis of Events in Outer Space Keynote o 7th Annual Symposium of Photo Instrumentation Engineer

LEADING SCIENTISTS, engineers and other specialists in photo-optical instrumentation from the United States and as far away as Kwajalein Island attended the 7th annual technical symposium of the Society of Photographic Instrumentation Engineers Aug. 6-10 at Statler Hilton Hotel, New York. More than 300 participated. The symposium was held with the co-operation of the U.S. Air Force Systems Command.

Photo-optical instrumentation is concerned with acquisition of engineering data through the use of highly specialized photographic equipment, such as ultra high speed motion picture cameras that make exposures at a rate up to 150 million per second, and radio-controlled tracking cameras that record a missile flight at the moment of launch and far into space.

Eye-Analysis of Space Data

A large portion of space vehicles are designed primarily to carry photo-instrumentation equipment to provide visual data that can be studied and analyzed by eye. This contrasts, for example, with purely electronic data that becomes meaningful only when "read out" with appropriate accessory equipment.

Reflecting the key role of photo-optical instrumentation in the nation's space and missile program, most of the week's 47 technical sessions were devoted to the problems of recording and analyzing events taking place in the hostile environment of space.

Other applications of photo-optical instrumentation as used in medicine, cineradiography, biology and a number of manufacturing processes also were covered by specialists in these fields.

Cites Importance of Lasers

General Bernard A. Schriever, U. S. Air Force, delivered the keynote address on "A New Spectrum in Technology." General Schriever heads the Air Force Systems Command which provides complete aerospace systems to the Strategic Air Command Tactical Air Command, and the Air Defense Command.

The General's address emphasized the many and varied applications of lasers. He predicted that this revolutionary device may prove to be even more important to the world that the development of the ballistic missile, the discovery of the transistor or the ality of Telstar.

Ballistic missiles revolution the military art, transistors moded previous development electronics. Telstar, an instant ous and automatic communicat link between Europe and Ame is the precursor of global comn ications networks through sp General Schriever said.

He pointed out that the l will have a profound impact every scientific and technical cipline represented at the co ence — and more besides.

The laser is only one of many areas of advanced techn gy that must receive increased port if our nation is to mai technical superiority, the Ge added.

Visual Proof of Disarmamen

Trevor Gardner, presiden Hycon Manufacturing Co., guest chairman of the keynote sion. He introduced Ge Schriever.

Formerly Assistant Secr for the Air Force for Rese and Development, Mr. Gardn currently a member of the ge advisory committee of the U Arms Control and Disarma Agency.

Mr. Gardner presented a p at the opening technical sessio the symposium on the problem disarmament verification. It particularly significant that photographic techniques empl by people who do photo in mentation are indispensable t activity.

Adimiral Pirie Honored Gue

Guest chairman at the ba session was Captain Williar Fortune, USN, Commanding cer, U. S. Naval Air Test Fac Guest of honor was Vice Ad R. B. Pirie, Deputy Chief of Operations (Air) USN.

In his remarks, Admiral described his early air acti with the Navy. He also sh slides and discussed two of m aircraft useable for reconnais missions. These are the McDo Phantom II and the North A can Vigilante.

A major feature of the sy sium was the Exhiboram Equipment, in which latest d opments in photo-optical i mentation equipment were ex ed by some 60 manufacture

The Society's New York a

was symposium host, the first be held on the east coast. Acding to William T. Curdts III, eral chairman, holding the event New York City made it possifor many to attend from the antic seaboard and the midwest the first time.

Non-Profit Professional Group

The Society is a non-profit prosional group founded in 1956 n photographic apparatus be used for instrumentation work generally conventional equipnt that had to be modified for specialized use. The Society is dited with influencing formation new firms for the sole purpose serving photo-instrumentation uirements, and also establishnt of specialized facilities with existing photo and optical comies.

Eleven local chapters are located Los Angeles, China Lake, White ads, Albuquerque, Atlantic Mis- Range, New York City, San ncisco, Washington, D. C., ndenberg, Yuma and St. Louis. mbership totals 1200. Sixty panies support the Society ough sustaining memberships.

KALART VICTOR

MOVIEMATIC AND DUOLITE MODELS

This Salesman Never Gets Tired

He also has a flawless delivery, a photographic memory for sales features, and a continually cheerful disposition.

In short, he's a 16mm sound film that goes anywhere to tell your story perfectly through the use of a Moviematic or Duolite projector.

Moviematic and Duolite models by Kalart/Victor are designed to show your films under the exact conditions you want. For example, the built-in screen permits the use of film in a person-to-person sales situation. And the repeater magazine—a Moviematic feature—eliminates rewinding and rethreading so your show can start at the flip of a switch.

Projectors are available on a purchase, lease, or lease-to-purchase basis. Almost any arrangement can be made whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 16T

TELEVISION NETWORK LINKS LARGEST NEW YORK HOTELS

TeleGuide's Closed-Circuit System Delivers Convention Shows, Sponsored Films to 25,000 Rooms in 26 Hotels

WITHIN A FEW MONTHS, 50,000 to 60,000 New York City hotel rooms will be equipped to watch a new kind of television called TeleGuide which will broadcast special programs of intreest to travelers, conventioneers and vacationers in New York on three different channels, 18 hours a day.

Currently operating in 25,000 rooms of 26 of the largest hotels in the city, TeleGuide, a subsidiary of Sterling Movies U.S.A., has been on the air with one channel (6) since June with programs devoted to New York's current entertainments, sightseeing, shopping, the correct time, local news and weather, ticket availabilities — all the information visitors need to "have a wonderful time in New York." In addition, special "newsreel reports" by Bob Considine, Kenneth Banghart and Wendy Barrie visualize the city's many wonderful attractions.

Hotel network will use three channels; reach 50-600 hotel rooms.

TeleGuide's New York studio.

Add Two Channels in September

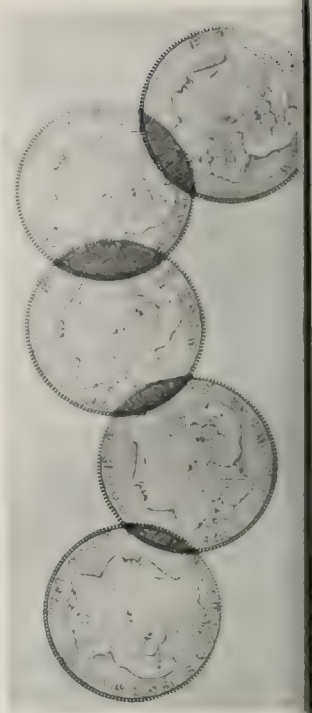
Projected for operation in September are two more channels — (3) and (10). Channel Three is intended for the ever-increasing number of foreign visitors in New York. Half-hour programs — pictorially somewhat like those on Channel Six — will be announced in six languages: French, Spanish, German, Italian, Portuguese and Japanese.

Channel Ten is intended as a television communications system for the private use of convention and exhibition groups. From a central studio, convention management may telecast to delegates in any number of different hotels. Telecasts may include daily schedules, last minute bulletins, speeches, highlights from the previous day's sessions and panel film discussions. No charge will be made to convention groups for the use of TeleGuide facilities.

Fashion Tie-Ins for Buyers

TeleGuide worked with the recent Intimate Apparel Buyers Convention which brought 22,000 lingerie buyers and sellers into town. Special programs featuring fashion editors from Seventeen, Glamour, Vogue, and Harper's Bazaar were cabled to the hotel network before breakfast and before dinner every day. Four more upcoming conventions are currently scheduled for Channel Ten coverage.

Sterling Movies U.S.A. approached the hotel room closed-circuit venture with an investment so far of $500,000 and a franchise from the city to use underground coaxial cable ducts to wire all midtown hotels. Each hotel is hooked into the system without charge, and TeleGide's financial return is based on the sale of advertising spots. About twenty advertisers are currently using the Channel Six cable.



Broadcast headquarters for the System is at Sterling Movies U.S.A.'s 61st Street Studio where a staff of 17, including five announcers, keeps the station humming seven days a week from 7 AM to 1 AM.

Reach Top-Quality Audiences

No "rating" system has been developed as yet to determine how many people are watching Channel Six, but the potential is great — the average occupancy in TeleGuide-equipped hotels is two a week, and there is an average of one-and-a-half persons per occupancy. The most popular viewing hours seem to be 7-9 AM, 5-7 PM and from 10 PM to midnight.

Of particular interest to the business film field is an upcoming series of programs which will be called *Executive Screening Room*. These programs, which will be on Channel Ten when no convention is in town using this channel, will feature sponsored films of 15 to 30 minutes in length and of particular interest to visiting businessmen. These films will make up a

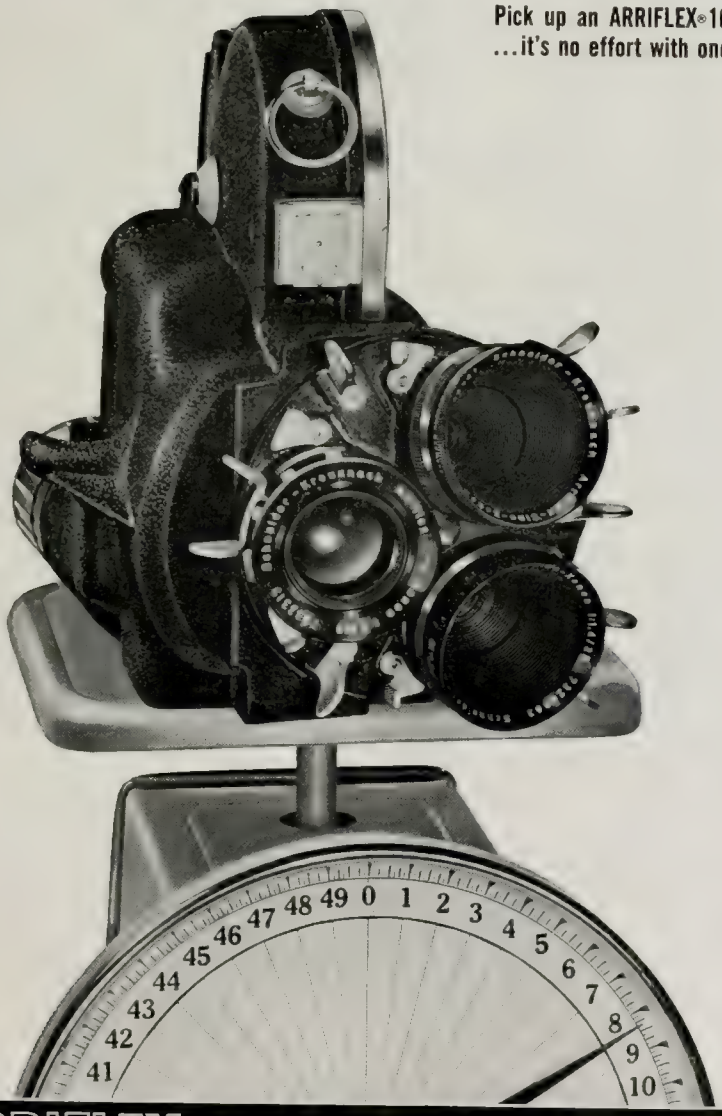
Scaled for portability!



There's not an excess ounce anywhere on the Arriflex 16... because this professional motion picture camera was designed to **handy** proportions. When you film with it, your hand can be as quick as your eye. It's a classic achievement in portability!

Yet it embodies today's most desired and widely imitated motion picture camera feature—**the Arriflex mirror-reflex shutter.** What's more, it is the only professional camera under $2,000 with a **registration-pin film movement.** It is part of a precision-engineered system—which includes interchangeable magazines, sound blimps, motors, time-lapse and other special-purpose equipment.

Here's how the Arriflex 16 earns its lightweight title. The basic camera, 5 lbs. 14 oz. Add a variable-speed electric motor, and you've added only 20 ounces. Complete with three typical lenses, the ready-to-film Arriflex outfit scales just over 8 lbs. It travels light and compact in the Arriflex 16 "A" case, designed to fit under your airplane seat... to save you waiting time and freight charges. It's a true money-saving **portable!**

Pick up an ARRIFLEX®16 today ...it's no effort with one hand!

TELEGUIDE'S DEBUT:

(CONTINUED FROM PAGE 20)

two-and-a-half hour program and will be repeated three times a day week-days in the period from 4:30 PM to midnight. Slides and commentary will precede each film explaining its purpose, its credits and any awards it may have won. It is expected that most of the films to be shown will be in the field of area development or other subjects of particular appeal to executives.

Laying cable for TeleGuide system.

Films will be shown on a paid basis. Rates have yet to be determined for the Executive Screening Room.

Week-ends, when *Executive Screening Room* is off the air, another series of sponsored films called *Travel Show Case* will be shown.

Charles F. Dolan, Sterling Movies U.S.A. president, considers that TeleGuide — for a brand new business — is doing quite well. Viewer response and advertising revenues are enough to reassure him that TeleGuide is well on its road to success.

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

101 *Entries for Agriculture's Centennial Film Festival . . .*

. . . One hundred and one films, produced by a cross-section of colleges, universities, associations, and industry, have been entered in the U.S. Dept. of Agriculture's Centennial Film Festival. With evaluation set up by point system, the motion pictures will be scored first by 34 judges in the field and then by six final judges, all of whom have been selected from education government, business and film making.

Entries from the Film Board of Canada have been received for a special Americas Day; Latin American motion pictures will also be shown at this time, on a non-competitive basis.

The purpose of this festival is to introduce large new audiences to agricultural films and to extend greater recognition to their makers. Film categories include: farming, crops, animals, engineering, food, home, pests, resources, science, recreation, history and marketing.

Winning films will be made available to TV stations and civic groups. The event will be held in early November, although dates have not yet been finalized at press-time.

* * *

Defense Documents Marxism in "Road to the Wall" Film

. . . At the road's end, there is a wall. It's a one-way street; and it began in the mind of Karl Marx. The name of the road is *communism*. How it began, and spread, and infected the whole world is the theme of a shocking new documentary, first in a series of troop information films produced for the Department of Defense's Directorate for Armed Forces Information and Education.

The Road To The Wall, crisply narrated by James Cagney, is not an esoteric film about ideas—it is a well-cut reel of facts. A curious melange of old, old footage, stills, animation and live action, in stark black and white, lends this film its authenticity.

For audiences prone to be apathetic to the free world's greatest problem, the picture will come as an unpleasant surprise. It's not fun to re-live the Hungarian revolution; it's a sickening blow to see for yourself how Cubans are executed. But the essence of the film, which must be faced, is that walls are beginning to encircle the

Walls, like the one dividing Berlin, are beginning to encircle the globe.

globe like blood vessels around a wound. And in order for us to face the future, we must take a hard look at the past.

Communism is a big subject for a one-half hour film. But in this case, the message comes through.

USIA Sets Up "Interneships" to Help Young Film Directors

. . . George Stevens, Jr., the dynamic new director of motion pictures for the United States Information Agency, has recently announced the establishment of an "interneship" program for young directors. The project has been planned to meet the serious need for employing young men who have studied moviemaking in college, but who are unable to find jobs in the industry because they lack experience. Young movie-makers chosen to participate will make documentaries for the government and, at the same time, prepare themselves for future work in the field.

Stevens, who also serves as a liason between USIA and Hollywood, has chosen two skilled graduate students from both the University of California at Los Angeles and the University of So. California. These men will work in the agency in Washington for one year, and then will be sent abroad to make films for USIA.

"This is only the beginning of what we hope will become an important opportunity for talented Americans to acquire experience in movies and at the same time perform an important service for the country," said Stevens. "We are not interested in making travelogues. We are trying to show how democracy works and how people can help themselves in developing nations. Our country has developed a marvelous mechanism in its movies and it must use this wonderful tool to explain its way of life to other countries. But such movies, to be successful, must have quality and vitality."

USIA now distributes (in lands abroad) about 200 documentaries and 500 newsreels.

* * *

Tony Jowitt Joins USIA Staff as Special Asst. to Stevens

. . . Tony Jowitt, former Chief of Motion Pictures and Photography at the Federal Aviation Agency has been named Special Assistant to USIA's George Stevens. Before his Washington appointments, Jowitt was Deputy Chief of the Commercial Project Division of the US Air Force's Air Photographic & Charting Service in Orlando, Florida.

Thiokol's Second Air Force Sponsored Film Being Scripted

. . . Thiokol's *second* Air Force Sponsored Film on the Minuteman missile is now in scripting stage at Walter Wise Productions, Los Angeles. A first film, *Minuteman-Missile and Mission*, produced by National Film Studios, Inc. of Washington, successfully documented the birth of this new "weapons system." The new film will cover its operational aspects.

* * *

Ah Well, Abe Lincoln Won't Dispute This Dubious Honor . .

. . . One hundred years ago, after the Bull Run "picnic" turned into a serious Civil War "battle", Abe Lincoln appealed to Congress for money for more troops. And that's when income tax was born.

A filmed documentary of this unusual story, liberally starched with information for the modern taxpayer, is in production now for the Internal Revenue Service and will be on theater screens and TV later in the fall.

Milner-Fenwick of Baltimore, Md. has shot the color picture in authentic settings with live actors. Bob Fenwick scripted the story for Charles Lammond's Public Information Office at I.R.S.

* * *

On the Milner-Fenwick Slate:

. . . Milner-Fenwick is also writing a dramatic story about a disabled fisherman in the Monterey commercial fishing fleets for the Social Security Administration. Aimed for a general audience, it will run 27 minutes and will appear on TV.

In addition, these producers are planning a film for the Southern Railroad Co., designed to show RR brakemen the most expeditious way to handle freight.

NEW FROM ACMADE

ACMADE TUNGSTEN PRECISION SPLICER

This moderately priced splicer incorporates new precision features which insure absolute accuracy and safety in splicing. Three models are available: Model 16-16mm., Model 35-35mm., Model 35-16 combination 35mm. and 16mm.

1. The combination 35mm.-16mm. Model features retractable 35mm. and 16mm. pins. This permits center placement of the 16mm. pins for A and B roll splicing.

4. Specially designed right-hand pressure block permits easy and accurate back-scraping on all models.

5. Tempered steel springs provide perfect pressure, positioning film firmly during scraping and splicing processes.

6. Thermostatically controlled heater maintains constant 100° temperature.

2. Stainless steel blocks are precision fitted with Tungsten-Carbide inserts for cutting. Cutting edges will remain sharp and last forever.

3. Attached scraper adjustable for depth — fitting jig incorporated on splicer base.

Acmade Foot-Operated Splicer with Tungsten Tipped Blades

ombination

16mm-35mm
Model . ..

$1495

This splicer is constructed, as is usual with ACMADE products, of the finest materials and workmanship. All castings are of the best quality and the top body and cutter arms are seasoned to prevent distortion after machining. The machining is carried out to limits of ± .0005" in order that the cutter blades shall close in a dead parallel manner. The cutter blades are made from stainless steel with Tungsten Carbide inserts, and afterwards ground lapped and polished to a limit of ± .0002" thickness and the cutting edges relieved by 1°. The Tungsten Carbide inserts will have indefinite life and will not require sharpening as with other types. A heater unit is installed in the top body of the machine. The top light in a well glass fitting is attached to the body of the machine and also an inspection light in the waste bin together with cement bottle and brush. A scraper block is supplied and also a scraper block setting jib and support shelf rubber-covered. The whole machine is finished in first quality grey hammer and all metal parts other than cutter blades are hard flash chromed.

KNIGHT STUDIO
159 E. Chicago Ave. Chicago

Next Month: a Buyer's Guide to Film Production Services & Equipment will be featured subject.

At left: a principal speaker at Engineers' Get-Together luncheon is Charles H. Percy, board chairman of the Bell & Howell Company. **Right:** Convention vice-president for 92nd program is Harry Teitelbaum, Hollywood Film Company chief.

Engineers Look to Communication Progres

Society of Motion Picture & Television Engineers to Meet in Chicago Oct. 21-2

THE 92ND CONVENTION of the Society of Motion Picture and Television Engineers, coming to Chicago's Drake Hotel on October 21-26th will carry as its main theme "Communications Progress—Television and Motion Pictures in Education and Industry." Featured are technical papers on related subjects, a tour of the nearby Argonne National Laboratory, and exhibits of new equipment. Convention vice-president for this meeting is Harry Teitelbaum, Hollywood Film Company executive; assisting him behind-the-scenes are SMPTE president John W. Servies (whose term ends in December) and the unopposed nominee for the presidency in 1963-64, Reid H. Ray, president of Reid H. Ray Film Industries.

Program chairman Jack Behrend, Behrend Cine Corp., and his local committee in Chicago have developed some eleven technical sessions, many of them directly relevant to the meeting theme. Leading off the program at the Monday October 22nd luncheon get-together is Charles H. Percy, board chairman of Bell & Howell, who will speak on "The Challenge We Face."

Topic Chairmen and Technical Sessions

Topic chairmen and their sessions include: William H. Smith, Allied Film Laboratory, leading the program on "Laboratory Practices;" Robert A. Colburn, Geo. W. Colburn Laboratory, will preside at "8mm Films" session Tuesday. Reports from observers at the Sixth International Congress on High-Speed Photography (being held in The Netherlands September 17-22) will be featured on Tuesday and Wednesday. Max Beard, U. S. Deleg to the Congress, will preside; Daniel Gir Argonne National Laboratory, is topic ch man for sessions on "Instrumentation High Speed Photography."

Keyed directly to the convention theme the Thursday sessions on "Industrial Au Visuals" guided by Harry E. Paney, Art Anderson & Co.; and "Films and Televisio Education" chaired by William D. Hed Calvin Productions. Ellis W. D'Arcy, n sound specialist, will lead the program "Sound Recording" and Wilford C. Prat National Broadcasting Company, will c "TV Equipment and Closed Circuit Appl tions."

Chicagoans in Charge of Program Events

In charge of all film showings is Ken M. Mason, Eastman Kodak Company. He also handle banquet arrangements, with Ge W. Colburn as chairman of entertainment luncheon and banquet programs. Harold Ki Wilding, Inc., is in charge of the Get-Toge luncheon arrangements. General arrangem chairman for staging and housing the Con tion at the Drake is Phillip E. Smith, Ko Processing Laboratory, in Chicago.

The annual Equipment Exhibits, expe to fill two of the Drake's largest conver rooms, is being managed by Exhibits Chair Allen Hilliard of the Colburn Laboratory s

Members of the Association of Cinema L oratories will hold meetings on Saturday, C ber 20 and on Monday, October 22 at Drake.

This Radiant Screen
was opened and closed
6,477 times

and it still works as good as new!

At our Testing Laboratories in Chicago, this Radiant Model EDB Screen was opened and closed by hand, then moved and the operation repeated a total of 6,477 times. This is conservatively equivalent to 9½ years' usage! And according to the laboratory report at the end of this usage test, the screen worked practically as good as new!

What is the secret?

Radiant engineers appreciate fully the extremely rough usage to which A-V screens are subjected. That is why every Radiant screen is especially constructed for extra heavy duty in *every* part — including the tripod, screen case, roller bar, opening and closing mechanism, screen leveler and the screen fabric. The new tripod model here illustrated, for example, has *12 basic new improvements* that make for longer efficient service. And this is typical of features in Radiant A-V Screens that enable them to triumph over rough handling and severe usage.

The world's most complete A-V line with a screen for every need Whatever type of screen you need — Tripod, Wall, Wall and Ceiling, Electric — Radiant has it. Whatever size of screen you need — from 40"x40" to 15'x20' — Radiant has it. Whatever kind of screen fabric you prefer — the new whiter, chemically treated glass beaded VynaFlect® Plus; brilliant silver lenticular OptiGlow® — or, white lenticular Super UniGlow® — Radiant has it.

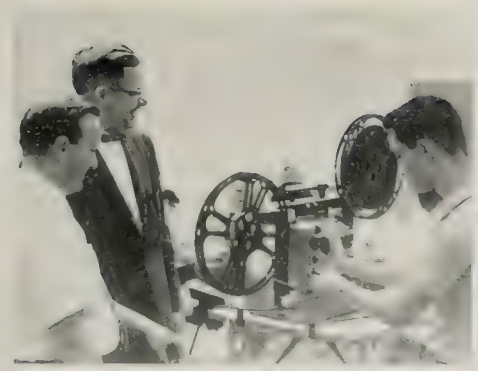
VICAUDIO



SELLS, TRAINS, TEACHES WITH THE EXCITEMENT OF FULL-COLOR 8mm SOUND FILMS!

This is the new VICAUDIO COMPACT SOUND 8 CARRY ALL PROJECTOR... the remarkable lightweight rear-screen projector in an attache case! With VICAUDIO, new professional quality 8mm sound movies open a new dimension in audio-visual communication. Magnetic sound with its flexibility... 8mm film with its amazing production savings... loop-loading with its repeat-message possibilities... all combine in the VICAUDIO. May we send you the full story of 8mm sound and the equipment which brings it to reality?

VĪCOM, INC. A SUBSIDIARY OF ELGEET OPTICAL COMPANY, 309 CHILD STREET, ROCHESTER 6, NEW YORK

B&H Autoload projector was tested seven hours a day for 10 weeks at Niles Township High School.

e latest developments in

motion picture projectors

NEW TOOLS FOR BUSINESS AND INDUSTRY

HE TEMPO of design progress, ooking to more efficient, lighter l simplified motion picture pro- ors for both 8mm and 16mm nd films, was tremendously pped-up within the past eight nths. The introduction of auto- ic threading 16mm sound pro- ors (see below), improvement 8mm and 16mm sound equip- nt, particularly in "repeater" dels and other steps were note- thy in this period.

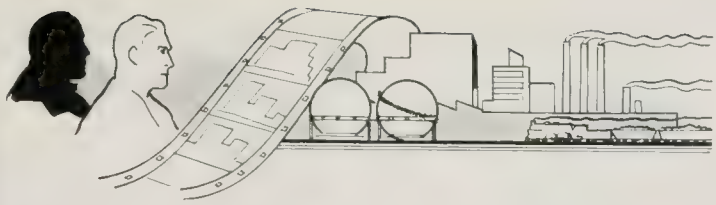
* * *

cialist Autoload Filmosound t With Automatic Threading

On the 30th anniversary of its n first 16mm sound projector, roduced in 1932 by Bell & Ho- l, this leading photo-electronics nufacturer has completed long nths of development and field ing of a revolutionary new auto- ic threading 16mm sound pro- or, the Specialist Autoload nosound, which made its debut ate July.

horoughly field-tested under ely varying conditions of use, perature and humidity, the new oload Filmosound was finally roved for introduction to the l by Bell & Howell engineers. st difficult obstacle was the quest of design and mechanism able of handling every conceiv- type of 16mm print material out fouling up the automatic ading path. Shrinkage, curling, condition (ranging from the ncy of a wet noodle to the leness of a piece of dry mac- ni) all had to be taken in stride.

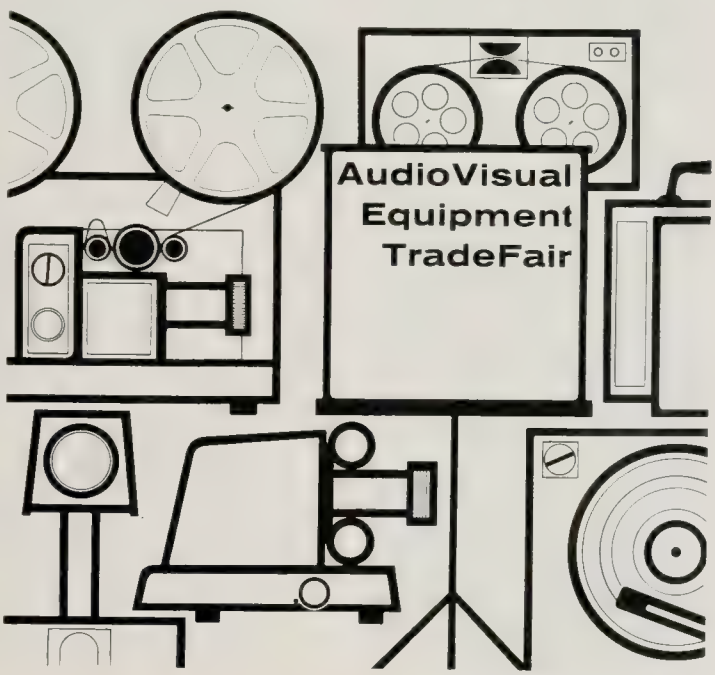
Long Months of Testing



elieved ready for introduction ar ago, the new Autoload was through rigorous tests in B&H engineering laboratories, subjected to uninterrupted use far exceeding a projector's normal life expectancy and operated in a specially constructed room where temperatures ranged from 120 degrees down to 40 below zero. Typical field tests were those which took place at Niles Township High School in Skokie, Ill. where the new projector was run seven hours a day for 10 consecutive school weeks, in many cases by students who had never before operated a projector.

Threading of the Specialist Autoload Filmosound takes 3 seconds.

Weighs Under 31 Pounds



Employing a unique "follow the numbers" system engraved on its controls, the Autoload Filmosound can be quickly mastered. It weighs only 30 lbs, 13 oz. and will project a bright sharp picture in a room that is not fully darkened. The new projector has the exclusive B&H Proximity lamp with built-in reflector and Super Proval 2-inch f/1.4 lens; controls are well arranged in close proximity on an illuminated vertical panel. The Specialist Autoload was designed to sell for $755.

AudioVisual Equipment TradeFair

unprecedented progress has been made in the design and engineering of the projectors and related audio-visual equipment to which the editors devote the opening pages of this new issue. **fumble-free threading,** light weight, bright screen images, new dimensions in visualization are especially noteworthy.

the challenge to re-equip audio-visual facilities in business and industry is here. now is the time to "tool up" for progress through more effective showmanship, to equip salesmen and dealers for the "hard-sell" in which this equipment has proven so important to many companies. **these pages provide** the highlights of an exciting parade of new products.

AudioVisual Equipment TradeFair

8mm and 16mm motion picture projectors

Fairchild "8" Rear Screen Projectors Have Cartridge Loading

☆ Two models of the Fairchild Camera & Instrument Corporation's Cinephonic 8mm magnetic sound rear screen projectors are in current use. The 200′ model weighs 15 lbs.; a 400′ model is only two pounds heavier. Both units have a screen size of 8½″ x 11″ and both of these machines are designed for continuous, repeat performance of the encased (cartridge-type) motion pictures. Electronics are silicon transistorized.

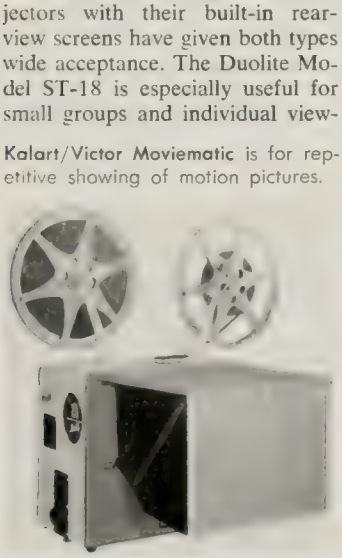
Amplifier output on these Fairchild repeater projectors is 3 watts, ample for their personal demonstration requirements. Speakers are 4″ x 6″ oval construction. A clip-in mirror permits larger screen front projection when desirable. The manufacturer notes that nationwide service facilities have been well developed and that machines are in wide use among automobile dealers and other firms.

Fairchild Cinephonic rear-screen projector weighs only 15 pounds.

This type of 8mm sound presentation promises to mature into an entirely new field for all types of product presentation, looking to the day when motion pictures will supplement manufacturer literature and training manuals, etc.

Manufacturer's suggested list prices of the 200′ model is $399; the 400′ model carries a suggested list of $429.00.

Kalart-Victor's "Moviematic" Has Built-In Film Magazine; The "Duolite" is Company's "Two-Way" 16 mm Sound Projector



☆ New (in the past year) to the Kalart/Victor line of audio-visual products are this pioneer company's Moviematic Repeater and the Duolite two-way 16mm sound projectors formerly manufactured by Technical Service, Inc.

Recent improvements and intensive use of these single-case projectors with their built-in rear-view screens have given both types wide acceptance. The Duolite Model ST-18 is especially useful for small groups and individual viewing such as for counter demonstration, dealer salesrooms, etc.

Where a given film must be shown repeatedly, the built-in continuous film magazine feature of the Moviematic models is desirable. Considerable time and film handling in the field is minimized. A flick of the switch begins a showing; bright, clear optics put a sharp image on the rear-screen, which has considerable size. Direct projection is optional when required.

Kalart/Victor also recently introduced two new models of the standard Series 70 projector. These models 70-15 MP and 70-25 MP feature built-in magnetic playback circuits, as well as optical sound. Switching from magnetic to optical film projection is quick and simple on both models. Two amplifier sizes are offered for these Series 70 models.

Kalart/Victor Moviematic is for repetitive showing of motion pictures.

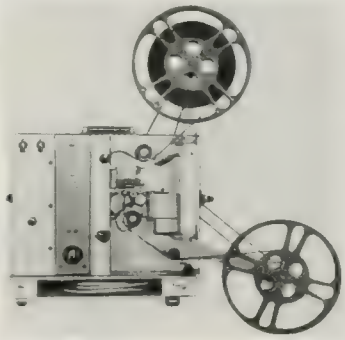
An A-V Trade Show "in Print"

This equipment "Trade Show in Print" was a key feature requested by a large majority of readers in a recent preference survey.

Advanced Transistor Circuitry Provides High-Fidelity Sound on Kodak's Model AV-126 TR Pageant 16 mm Sound Projector

☆ Finer sound and brilliant picture quality are the highlights of the new Eastman Kodak Model AV-126 TR Pageant Projector, featured at recent trade shows. The company's engineers created a transistorized amplifier for this special audio-visual projector (flat from 30 to 20,000 CPS) and the result brings top-rated high fidelity reproduction to sound motion pictures.

Suppression of distortion, made possible by the advanced transistor circuitry is attributed to this new Kodak AV projector. A well-baffled Kodak 11 x 6-inch oval speaker exactly matches the projector to preserve this fidelity. Simplified threading (follow well-defined red lines on the mechanism) insures rapid, easy threading. One switch control of the three major operating functions of the projector — blower, lamp and forward or reverse — adds to simple han ng



Kodak's Model AV-126-TR ho th fully transistorized amplifier.

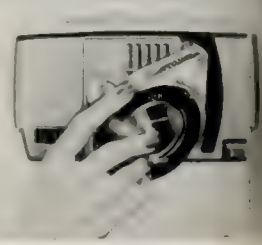
Lamp is standard 750-watt, ith 1000 or 1200 watt lamp optiona Model 126 TR, a sound-silent-ro jector with Super 40 Shutter s single-case machine, supplied wi 2-inch, f/1.6 Lumenized lens A operation. Manufacturer's sug est ed list is $650. Total weig o unit is 35½ pounds.

Improved Models of 16mm Sound Projectors Introduced by RC

☆ At recent audio-visual equipment trade shows, such as the National Audio-Visual Convention in Chicago, the Radio Corporation of America demonstrated hig and two-case 16mm sound pro jectors with several improvem nts Single-switch operation, newan more powerful 25-watt ampli er and a new claw design for fil movement were noteworthy a om these. Latest of the RCA m dels marketed by the company's Au dio-Visual Products' division ul s have convenient folding reel ms

RCA 16mm sound projector

* * *



A new RCA magnetic pro to is also available as well as m del with reverse operation. All wi accommodate the optional 00 watt lamps for added screen ru liance, although 750-watt o pu is standard.

Show in Seconds With Technicolor's 8mm "Instant" Projector

☆ Well-named is the Technicolor Corporation's 8mm "Instant" Movie Projector with its push-it-in-and-turn-on-the power Magi Car tridge. The sealed plastic case contains about 4½ minutes of 8mm color film, processed and packaged by this famed color company. 250-watt illumination is sufficient to put a bright picture on the wall screen or across the prospect's desk on a quick fold-out surface.

This little "giant" is already serving salesmen (where sound isn't essential) in hundreds of direct demonstration situations. It has possibilities for export trade promotion where translated tap tions are easily employed. I mi nation of threading and rewi ing (it's ready to show again whe ru through cartridge) is furthe ad vantaged by encased protec ion

he Technicolor "800" Instant a self-storing power cord; sion-ground "Zoom" Technor lens, fully color-corrected 15mm to 25mm range to ad-picture size to fit the screen. ture is self-cleaning. Best of his equipment weighs only 7 pounds; measures just 9¼ x 5½ x 5¼ inches. A "flip-top" model with rear-projection screen has also been designed for the "800" Instant. It carries projector plus extra space for Magi-Cartridge storage and transport. Technicolor's Hollywood film laboratories make prints for this projector by the imbibition method.

icaudio "Sound 8" Throws Bright Images on Large Rear Screen

onstantly improving on an al-y well-tested compact Sound tion picture projector, Vicom, (a subsidiary of Elgeet Opt-Company) features loop-load-of the finely-tooled Vicaudio. dy images, brightly illumin-on the large rear-screen sur-of this self-contained unit, be constantly repeated for bits and displays.
ightweight and compactly con-d in its sturdy attache case, Vicaudio features the Kodak rojector mechanism joined to horoughly engineered optics. nt projection is optional for er groups but the Vicaudio proved able to handle large exhibit crowds in recent trade shows on its own rear-screen.

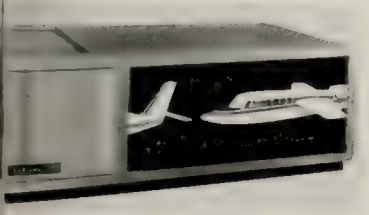
Vicaudio "Sound 8" features this sturdy, dependable mechanism.

usch Film & Equipment Introduces Continuous Film Cartridge

n established specialist in the of rear-projection, the Busch & Equipment Company (Sag-, Michigan) introduced a rev-ionary new film cartridge the pany has designed for continu-showings of 16mm sound mo-pictures on its Cinesalesman ectors. The new power-driven cartridge is machined of a high-alloy metal to within 1 1000th of an inch tolerance.

The company's continuous projection units have the proud distinction of being used by nine exhibitors at the Seattle World's Fair this year, including the Xerox "Library of the Future" theater where six synchronized Busch projectors are running around the clock in a unique circular auditorium.

The company also now manufacturers seven models of its Cine-Educator units which house projection equipment for rear-screen projection, eliminate darkening of classrooms and training areas. The Cine-Educator is recommended for employee showings along factory aisles, in locker rooms, etc.



usch Cinesalesman projector.

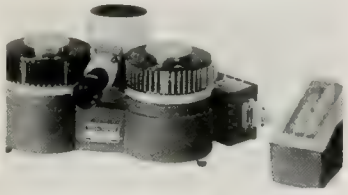
DuKane Unveils Wide-Screen "Vista-Sell" Filmstrip Projector

n exciting new product with ual display and exhibit poten-was unveiled at recent trade s by the DuKane Corporation's Audio-Visual Division. The wide-screen Vista-Sell *continuous flow* filmstrip unit (see illustration) carries color scenes (on 35mm film with a 2.35 to 1 aspect ratio) with smooth flowing action across its 8¼ x 20-inch rear view Polacoat glass screen. Filmstrip is in a loop and frames move horizontally from right to left at a speed of 1 ft. per minute. The Vista-Sell will handle programs with cycle lengths ranging from one to 30 minutes, automatically repeats and plays continuously.

Now in wide use is DuKane's sound slidefilm push-button, Flip-Top equipment, with its 9" x 7" rear-view Polacoat glass screen. The Flip-Top carries standard 45 rpm records, with 8 minutes of sound on each side. Projector has the simple, push-in film carrier with a unique optical and mirror system that projects clear images in perfect focus. Travels in a modern saddle tan vinyl attache case and weighs only 16½ pounds.

Left: "Vista-Sell" is a "continuous flow" 35 mm filmstrip unit for exhibit and other types of visual display. Just introduced by the DuKane Corporation.

DuKane's "Flip Top" provides a lightweight sound projector.

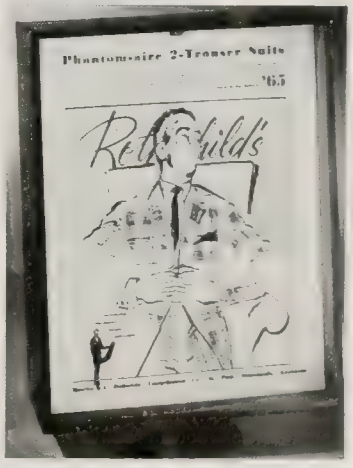


Random-Access Slide Projection Replaces Those Bulky Charts

☆ As many companies and trade groups have discovered, the old poster board presentation is a thing of the past. Remote controlled, random-access slide projectors like the all-new SLX-750 Dual Random Access Selectroslide, introduced this year by Spindler & Sauppe of Los Angeles, give new dimension to visual presentations. Finger-tip control operates up to 96 slides with the flexibility of immediate return to any slide as required.

Second innovation this year from S&S is the "radio" *wireless* Remote Control unit, the Slide Commander. Fitting in the palm of the hand, this device is completely transistorized, offers immediate response up to 150 feet from the projector.

Third innovation shown by this company at recent trade shows is the Selectroslide Speed Dissolve System. Two 1200-watt projectors are coupled to the system, enabling an instantaneous change-effect to take place on the screen, controlled by wire or by radio remote control (see above).



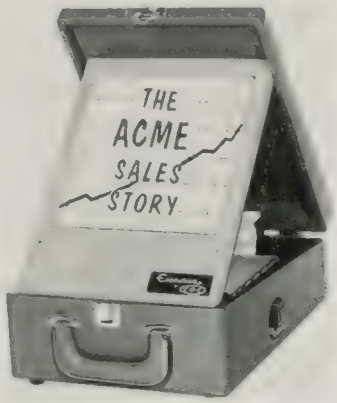
S&S Random Access Selectroslide

Immediate Display of Color Ads With New 3M Films and Viewers

☆ An unusual new tool that employs a plastic projection transparency film for its large images is the new display "projector" recently announced by Minnesota Mining and Manufacturing Company. Utilizing plastic film base which can be made into a transparency in four seconds (by running film and original through any standard "Thermo-Fax" Copying Machine), the "projector" is simply an illuminated display frame.

Made of hand-rubbed walnut, it uses four 25-watt bulbs for illumination and handles transparencies up to 11½ by 14½ inches (CONT'D ON NEXT PAGE)

AudioVisual Equipment TradeFair



overhead, display projectors and projection screens

(CONT'D FROM PREVIOUS PAGE)
(deluxe model). A standard model illuminates 8½ x 11- inch images, using a single 25-watt lamp for illumination.

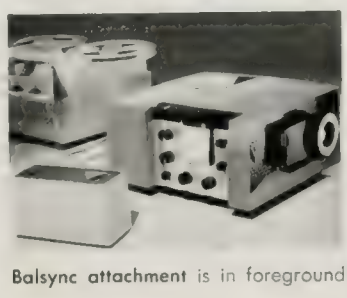
Films available from 3M include a direct reading positive and a color lift with which a full color transparency can be made from any clay-coated magazine page in about two minutes. Especially useful for advertising display reproductions. Deluxe "viewer" is $22; standard model only $9.80.

C.O.C. Industrial Improves Styling of "Executive" Projector

☆ Restyled to a smarter, streamlined appearance and now available in a new leatherette, attache-type carrying case is the C.O.C. "Executive" rear-view slide projector manufactured by C.O.C. Industrial of Long Island City, N. Y. This convenient desk-top projection viewer combines a built-in screen, projector and Airequipt slide changer.

It was designed for group viewing without room darkening and has proved to be an effective tool for salesmen, in industrial applications (as for safety education, etc.) and along the retail selling front where it provides handy demonstration of technical details, new product promotion and other merchandising uses. The list price of the Executive remains at $69.50.

Pictronics' "Powerhouse" Projects Bright, Wide-Screen Image



☆ A new entrant in the ultra-bright wide-screen projector field is a "Powerhouse Projector" introduced in recent months by the Pictronics Corporation, New York city. This 35mm wide-screen machine has 1,200-watt illumination with a dual-lamp changer and a high-velocity cooling system (necessary with the lamp size). The "Powerhouse" also has replaceable aperture plates and four way tilt control. 100-foot film takeup capacity (35mm strip) is moved swiftly through the aperture. Push button film advance is standard, with a handy connector for remote control.

Pictronics' 35 mm "Powerhouse."

New Balsync Attachment Synchronizes Slides With Tape Sound

☆ Want to make your own synchronized tape-slide program? New from Bausch & Lomb is a Balsync accessory which can be used with any of the company's low-horizon Balomatic slide projectors and a stereo playback tape reproducer. Slide changes are accomplished without any audible signal or pause. The second or stereo channel of the recorder is used to carry the change signal, furnishing an electrical impulse to the Balsync attachment which amplifies it sufficiently to trip a relay and actuate the slide projector at the proper instant. The Balsync attachment is priced at only $2.50 and is available from audio-visual dealers who handle this company's projectors.

Balsync attachment is in foreground

Ozalid "Porta-Lite" Overhead Projector a Model of Simplicity

☆ Extreme simplicity and portability, an important goal in overhead projection in training classrooms and the myriad of other business-industry application of this important media, has been achieved by Ozalid in the new Porta-Lite Overhead Projectors.

"Easy-to-carry" *and* to operate, the equipment has low silhouette (minimizing obstruction of images); tilted head but level platen. Lamp wattage ranges from 500 to 750 (in Porta Lite 7) and up to 1,000-watts in the Porta Lite 10. The 500 standard lamp is said to produce over 1,000 lumens. Model 7 takes 7 by 7-inch transparencies; Model 10 takes 10 by 10-inch transparencies; weight is 25 pounds and 35 pounds respectively.

Ozalid's Porta-Lite projecto

Radiant Unveils Combination Chalk Board and Screen at Show

☆ Getting a lot of attention at recent a-v trade shows was the new double-surfaced "Projecto-Board" just introduced by Radiant Manufacturing Corp. On one side there's a chalk board for demonstrations, etc.; flip it over and a silver lenticular screen surface is ready for visual projection.

Chalk board is quarter-inch thick green slate (black, optional). Projection surface is silver lenticular, a permanently embossed vinyl surface that resists ambient light; offers wider viewing angles. The new Radiant Projecto-Board is available in sizes 36 by 48 inches at $84.50 and 42 by 60 inches at $99.50. Well worth looking into and *at*.

New Beaded Projection Screen Surface Is Introduced by Da-Lite

☆ A totally new beaded projection screen surface was introduced by the Da-Lite Screen Company at the recent NAVA trade show in Chicago.

As General Manager George H. Lenke describes it, "a new chemical coating for the glass beads makes them moisture repellant. This 'Chemi-Cote' treatment eliminates 'foggy' reproduction of pictures on beaded surfaces, while insuring better bead adherance, retention of surface whiteness and longer life."

Specify "White Magic" screen surface, available in most screen models and wide range of sizes.

Da-Lite's "Video A" tripod mode features "Chemi-Coted" surface

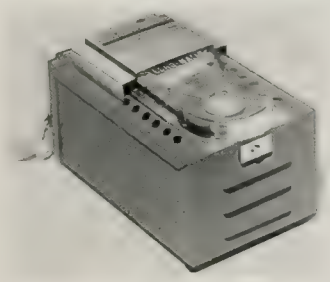
For the Really BIG Picture, Look to Polacoat Scenic Lenscreen

ow big can you go with rear-n projection? Polacoat, a ufacturer of the Lenscreen surfaces now being widely employed in this type of projection, is turning out sizes up to 20 and 30-foot widths for dramatic presentation.



The product is "Scenic Lenscreen" and it makes possible major showings of really dramatic proportion in largest auditoriums. Served by powerful projectors, the Scenic Lenscreen will support sales or dramatic visualizations with live action going on in front of the surface.

udio Announcer is Cousino's Latest in Tape Message Repeaters

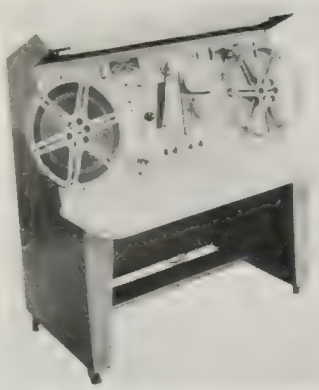
rade show visitors have stop-o listen when the Audio-An-cer was at work in recent ex-s of its maker, Cousino Elec-cs Corp. of Toledo, Ohio. new unit is a fully-transistor-magnetic tape message repea-which plays without interrup-or stops on cue.

he Audio-Announcer utilizes Cousino-patented Echo-Matic self-threading cartridge which provides tamper-proof housing and automatic rewind of the magnetic tape loop. Shutoff is provided by simple-to-apply metal foil or conductive paint at stopping points desired. Restart is by footmat start switch, remote start cord, photo-cel, clock, etc. They get the "message" clear and strong on this less than $100 dependable tape sound reproducer.

Wheelit Line of Projector Carts Takes Film Anywhere in Plant

☆ Moving projectors and accessories around the training department, through factory aisles or offices is made easier by the well-known "Wheelit" line of folding and permanent-type transport and projection stands. Model 4102 was shown with two new accessories at recent trade shows: a set of two screenholders (at $4.50) and a 20-ft. automatic retracting electric cord reel at $9.95.

There's also a strong Wheelit carrying cart for the plant photographer, Model C-55-PH, which folds down for auto use to 17 by 25 inches. Wheelits, manufactured by Gruber Products Co. of Toledo, Ohio, are of the folding or permanent type and designed for modern a-v requirements.



Here's the Wheelit Model 4102

Automated Film Inspection a Major Boon to the Film Industry

☆ In the brief years since its introduction, automated film inspection has proven its worth to the growing film industry. A *pioneer* in this field, the Harwald Company (Evanston, Ill.) has further improved its basic Inspect-O-Film equipment with the Mark IV Auto-Load, featuring three-jewel low pressure detection, 'slot" threading, automatic electronic scratch detection and recording, splice and footage counting. Unit provides inspector with a printed graph record of location and intensity of scratching; it operates at speeds up to 1000 feet per minute.

"Work horse" of the film inspection field is Harwald's Model "U" (Mark II) Inspect-O-Film. Operator convenience is a principal asset. This type of machine can be "duplexed" or used in combination with similar machines in the film library or in the studio.

Harwald Inspect-O-Film machine.

The West's latest in theater design, the 209-seat Lytton Center Auditorium adjoins exhibit gallery.

LYTTON CENTER OF VISUAL ARTS

Unique Show Case of Cinema's Past and Present Makes Debut in Hollywood

THE VISUAL ARTS have a new shrine in Hollywood. On July 2nd, financier and art patron Bart Lytton realized the fulfillment of a long-held dream with the opening on Sunset Boulevard of the Lytton Center of the Visual Arts. Bart Lytton (left) shows magic to Max Goodland, Los e County-Hollywood museum ierre Langlois, head of Cinema m in Paris.

For two months during mid-1961, sixteen typewriter size boxes toured 55 Ford dealerships from coast to coast. Shuttling from one dealership to the next for a three to five day run, the in-action test posed the simplest and most direct question in sales methods research, "Will this 8mm talking movie box help you sell cars?" The test asked each dealer for a pointed yes or no. The consensus was an almost universal "yes".

A six-film program was developed jointly by Ford and Wilding Incorporated to cover the '62 Ford line and not retrace ground which can be handled by the salesman's usual discussion and demonstration. The films work from the inside, underside, and test track side, showing high speed braking contests, tests of the body, frame and suspension, impact studies and some imaginative extremes to which the average car may never be subjected.

Showing Buyers What to Expect

In another film, Ford's Econoline trucks are loaded, unloaded and put through the kind of everyday punishment that they would get on the job. Said a Ford spokesman, "Buyers have a right to know what they can expect, and this is a logical way to show them."

Credits for the portable demonstration equipment go to Fairchild Camera and Instrument Corporation for its 8mm Repeating Sound Movie Projector. The simple design of the projector neither complements nor takes away from the story on its screen. Viewers seem hardly aware that they are watching a performance by one of the newest audio-visual sales promotion tools.

Queries Prove Viewer Interest

A dealer comments, "People usually throw questions at me while the film is running. Sometimes the film answers them and sometimes I do. Either way, we know they are watching the show and not the machine."

Of major concern to Ford was machine *dependability* since nothing is more embarrassing than a show that doesn't appear on schedule. Salesmen in any field are aware of what goes on in a prospect's mind when a dud occurs. A filmed, in-action sales point can come alive at the precise psychological instant and help carry a sale, or by failing to show, it can destory hours or days of work.

The people at Fairchild solved this reliability problem by original and unique mechanical design, and

While prospect's wife checks samples of interior fabrics, the husband views 8mm sound film extolling ruggedness, dependability of new Ford.

Ford Dealers SELL With 8mm

8mm Sound and Color Films Shown on Repeater Projectors Are Helping Salesmen Turn Car Prospects Into Customers

by using their own high performance silicon semiconductors which are normally used in only high speed computers and missile control systems.

Machine Had to Be Dependable

One dealer flatly promised that if the machine ever "bugged out", he'd get rid of it in five minutes. Attesting to the dependability, is his further comment, "Every customer who comes in, sees the film. So far my men are pleased with the whole idea. It works fine."

Regarding dependability, R. G. Hennessey, General Manager of Fairchild's Industrial Products Division, pointed out that there are cheaper and easier ways to build a machine like this but eventually quality must give and "we can't take that chance." "This one was designed, developed and built from scratch, as a first line business machine. If a home movie machine fails in the livingroom, there may be some red faces, but nobody loses $50 or $100 in commissions."

Ford's program for "selling" the 8mm sound film idea to its dealers followed strict marketing procedures. Its research covered all seven regions with depth studies of the filmed stories, their applications, projectors, dealer attitudes, pro and con. All tests were monitored and tabulated. Sales managers, salesmen, and customers were interviewed. Following that came meetings with regional car merchandising managers to explain the program and the results of its tests.

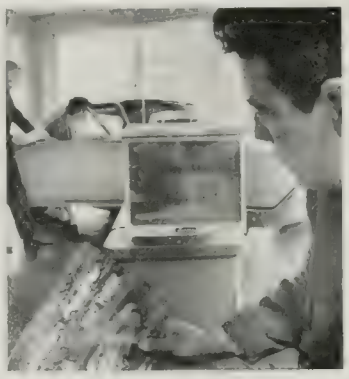
(CONT'D ON THE NEXT PAGE)

At McMahon Ford of St. Louis, sales manager Gene Worn (at right) shows members of his sales staff simple cartridge loading of the projector.

8MM SOUND SHOWS FORD FEATURES:

— Primary in the presentation to individual dealers was a sample film shown in the Fairchild machine. Backing this up was a flip chart summary of the program. It described the test period and results, features of the package, plus the how and why of its use and a detailing of how dealers could participate.

Salesmen who use the films swear by them. They (the films) can load and unload an Econoline truck a dozen ways with a dozen kinds of freight. They can put a



Ralph Anderson, manager of Capitol Motors, Helena, Montana, points out car feature on film.

car through swamps and over mountains without wrinkling the salesman's suit. It is the in-action link between the customer and salesman — without the bruises. Ford dealers have put a lot of faith and enthusiasm into this program.

Dealer Reactions Are Cited

Dealer reactions run from unbridled enthusiasm to cautious optimism. These typical quotes from some dealers seem indicative of the success of the program. *"Salesmen enthuiastic, showed film every time appraisal made." "Customers generally liked it very much." "Closed two deals." "Two deals closed on frame presentation." "Helped close a five truck fleet sale." "Actually sold one car without any product presentation by salesman." "Customers seeing features they never realized before." "When people leave our dealership to shop around, they know what to shop for besides price."* One of the most unusual applications from a Connecticut dealer, *"Keeps the children busy while I talk to their parents."*

Davis Ford salesman Bob Ayriss shows potential customer's wife interior of new Thunderbird . . .

Many salesmen take the projectors home to show their families and friends the Ford story. Comments one, *"Now my kids know what I do for a living, they know all about Ford cars."*

Machine "Designed" by Business

Fairchild's Hennessey, describing the projector as a "business machine," noted the requirements that were set up before the first draftsman touched his pencil.

"We didn't set our own specifications for this product. We had already gained a wealth of experience with the 8mm sound film from our consumer sound movie products. Businessmen from every industry spelled out their needs and listed all the logical machine parameters. Small as possible, with a hi-fi sound system that weighs next to nothing. To weigh less than a briefcase, take just as much abuse, and work for days or weeks at a time, or turn on and off a dozen times per hour. No wear on the film, brilliant picture at high noon. The machine meets most of these right now."

Ford Dealers Show 8mm Versions of Wilding Pictures

☆ 8mm color prints of six Ford motion pictures, produced by Wilding, Inc., are being featured on repeater projectors in dealer salesrooms. Titles include: *Econoline; New High in Quality; Falcon Line; Fairlane Line; New Standards for the American Road;* and a short version of the mid-year announcement film, *The Lively Ones*. Another '62 film, *It's Your Up*, has also been made available in 8mm black & white prints.

Focus on Official Visitors to the U. S.

Filming Visits of Foreign Dignitaries for Overseas Distribu

SEVERAL TIMES each year the United States receives an official visit to the President from a foreign Head of State. The purpose of these visits, from our point of view, is to solidify our good relations with other countries, and to aid in implementing our foreign policy.

From the time the invitation is extended until the distinguished visitor returns safely to his homeland usually represents an exciting time in his life and an important event for the people of his country. To perpetuate these visits, the United States Information Agency often arranges for a motion picture to be made showing all the happenings of the tour.

Film "Must Stand On Its Own"

The film goes much beyond the usual newsreel coverage; it is designed to stand alone as a full-scale 20-30 minute film of sustained interest and full production value. These films are widely shown in the visitor's country and often in other countries of similar interests.

Quite a few of the films have been made by the Thomas Craven Film Corporation, New York — a producer that could almost be considered a specialist in such activity. ("Almost" is not exactly true because Craven is also very active in documentaries, industrials and TV commercials as well.)

Thomas Craven made his first visiting foreign dignitary film in June, 1958, by submitting a winning bid to produce *The Shah of Iran Visits the United States*. This film proved to be so successful that Craven has produced fifteen of the films in the past four years.

Up until this series began, important visitors had only been covered "newsreel style." Thomas Craven thinks there is nothing wrong with that, but for a 20 to 30 minute motion picture he felt that the production should have more style and a different quality that newsreel coverage could not give. For one thing, the films ar color, and for another, they're planned to meet the demands f prepared treatment.

Special Skills Behind Camer

Craven found that by gettin cameramen used to shooting u controlled conditions, and pu them to the task of this spu the-moment coverage he grad began to get footage with m more scope and depth than r reel cameramen had obta Craven's cinematographers a young and strong to stand u the rigor of this kind of work they were all selected to ha good editorial background — to see and make the right e lishing and cutaway shots ins tively.

Beyond the mechanics of sh ing, the Craven operation ha veloped a logistical control enables it to leap-frog abou country carrying a great de equipment and still meet the lines of being at the right pla the right time to picture the of State doing the right — gra — thing.

Always kept in mind is th these films have a purpos they must conform to the Stat partment point of view and must conform to proper diplo usages and protocol.

Close Cooperation With US

Personnel of the USIA wo close conjunction with Crave directors, writers, editors durin completion stages. The comp productions are approved by US in Washington. Prints in 35mm 16mm are usually distribute foreign countries under the spices of the United States In ation Agency motion picture public information officers.

These subjects are shown t trically, and widely exhibit 16mm to non-theatrical audi throughout many lands. A pri frequently given to the fo visitor by the U. S. Ambassad

t Issue: the Award-Winners at the International Festival in Berlin

Featured players George Gaynes (left) and Carlos Montalban pictured on set of "The Panama Canal".

Big Ditch: the Real Story of the Panama Canal

First Modern Picture on Vital Link Between Oceans Will Be Shown in Two Hemispheres

SPONSOR: The Panama Canal Company.

TITLE: *The Panama Canal*, 28½ min., color, produced by Bay State Film Productions, Inc.

☆ A vital strategic link between great oceans, the Panama Canal provides an "open road" for the shipping of *all* nations. Operated and maintained by the United States, the Canal has been a favorite target for Red barbs. But today's cordial relations between Panama and the U.S. have been achieved and made lasting through understanding and mutual respect.

To bring citizens of both hemispheres the facts and depth of background about the Canal that is *their* assurance of real understanding, The Panama Canal Company has made possible this informative 28½-minute color motion picture. Few subjects currently showing are of greater importance to the Free World than the 16mm and 35mm prints of *The Panama Canal,* now on screens in the U. S. through the facilities of Association Films and showing throughout Central and South America via the United States Information Agency. A 35mm version is also being exhibited in Spanish language theaters throughout the land.

Shows Economic and Military Importance

This first modern film to be produced on the Canal is an educational account-in-depth on its construction, purpose, use and importance to the world. It delineates the economic, military and moral background of U. S. management and operation of the Canal; deals frankly with the basis of our relationships between the Canal Zone and host nation, Panama.

Bay State camera crews began the task of production last January. Over 20,000 feet of exterior footage covered the entire Canal operation. In March, interior scenes were lensed and recorded in the Springfield, Mass. studios of Bay State.

The cast, headed by Carlos Montalban, Latin-American star of stage and screen, includes other well known TV and screen personalities, notably George Gaynes and Luis Van Rooten. Their proficiency in both Spanish and English eliminated dubbing; each scene was shot separately for both language versions of *The Panama Canal.*

Through Eyes, Lens of a Photographer

The film's story line takes a free-lance photographer to the Zone for the renewal of a college friendship with a Panamanian, now an engineer with the Canal Company. During his stay on the Isthmus, he is afforded an opportunity to see first hand how the Canal operates and to learn the history of this vast engineering feat. Murals and historic newsreel footage depict early construction problems. Animation takes over to show the steps necessary for passage of a vessel through the Canal.

The around-the-clock operations necessary to give service to ships of the world are graphically depicted. Through this factual report, citizens of Latin-America and of the United States may share a true understanding of the tremendous technical detail inherent in the constantly-improved Canal operation as well as its strategic importance as a Free World bastion which U. S. forces guard.

Filming blasting operations to widen the Canal at Contractor's Hill overlooking Gaillard Cut.

"Newspaper reading is a . . . personal experience."

Vital Role of Newspapers

Publishers' Bureau of Advertising Film Tells Human, Emotional Factors at Work

SPONSOR: Bureau of Advertising, American Newspaper Publishers Association

TITLE: *Newspaper*, 15 min. color, produced by Elektra Studios, Inc.

☆ A.N.P.A.'s Bureau of Advertising is a sales organization whose purpose is to sell local newspaper lineage to national advertising. It does this with personal selling and a wide variety of media — notably with sharp, statistically-angled chart presentations showing the advantages of newspapers to specific advertisers.

But to go with these charts and their myriads of facts and figures, the Bureau has recently introduced a new non-statistical motion picture which is designed to set a mood, to bring out the often intangible qualitative factor of newspapers' appeal that static presentations lack.

Papers' Role as Communicators of Ideas

The film, simply titled *Newspaper*, shows the intimate relationship between the medium and its readers, tells the newspaper's pre-eminence as a communicator of ideas, through both its news columns and its advertising columns.

The film says that newspaper reading is a very personal experience. It is a flow of ideas — and the relationship between the reader and newspaper is an intimate one. It is a point of contact: a point at which the newspaper *communicates* with its reader; a point at which the reader *depends* on the newspaper; a point at which the newspaper *catches* the reader with his pores open; and a point at which the reader is *receptive* to advertising suggestion. In effect, it is a sense of involvement on the part of the reader in the newspaper.

Media Buying Has An Emotional Basis

Ted Barash, Vice-President and Director of Promotion of the Bureau of Advertising, believes that a great deal of advertising space and time is purchased on an emotional basis: that advertising buyers — very human beings — will often justify media selections with their own logic triggered by an affinity for the paper or magazine or network, as much as by reliance on cold statistics. Hence: the motion picture — an emotional thing which can involve its audience closely and even *create* a positive liking for newspapers.

Mr. Barash was responsible for several outstanding promotion films at Fawcett Publications (WOMEN'S DAY, TRUE, etc.) before joining A.N.P.A. last year. He has most successfully brought along this affinity for using moving footage to accomplish the setting of a qualitative mood in telling the newspaper story.

* * *

Newspapers which will use the new film are furnished not only with the motion picture but a complete publicity package to accompany showings, as well as a sheaf of preparatory speeches designed for seven different kinds of audiences, and mechanical advice on how to prepare the room and set up the proj

To date, only a few weeks after releas the film, reports from the field have b almost entirely enthusiastic. Quotes from ad ing advertising buyers and from newsp salesmen include such statements as t *"Finest newspaper presentation I've ever s "Technique excellent. This film goes we yond the figures we all have and helps terpret them. In this it renders a real ser "It sings! The script, the graphics, the m the message are all beautifully handled. W can I start showing it to my prospects?"*

How to Enjoy Underwater Sports in Safe

Aetna Offers Some Good Advice for Novice Scuba and Skin Divers in "Fun 'N Fathom

SPONSOR: Aetna Life Affiliated Companies

TITLE: *Fun'N Fathoms*, 27 min., color, produced by Aetna Life Photographic Bureau.

Pleasure diving, which already has attracted a million American Scuba divers and seven million skin divers, has become a major participation sport in just the past few years. The additional thousands who enter the sport each season make it one of the nation's fastest growing recreational activities.

Because diving involves entry into an alien world in which man is not designed to live, professional training and a great deal of practice are necessary if a diver is to enjoy the sport in safety. This is particularly true for those using Scuba (self-contained underwater breathing apparatus) to enable them to stay submerged for as long as an hour without resurfacing.

Novice Divers Can Be Accident-Prone

While statistics on Scuba accidents are as yet hard to come by, the Underwater Society of America reports growing evidence that too many novice divers are purchasing underwater equipment and using it with little or no training. Most serious and fatal diving accidents result from ignorance or emergency procedures and improper use of breathing equipment.

It is to the potential and beginning Scuba diver that this film, the first public service movie on Scuba diving safety, is primarily directed; it delivers the unmistakeable message that there is no such thing as beginner's luck underwater.

Film Points Way to Proper Training

Fun 'N Fathoms directs aspiring divers toward proper training by dramatizing the risks of being without it, showing that instruction is readily available and detailing what it consists of, and by demonstrating that diving holds virtually no danger for the skilled.

At the same time, the film's underwater color photography, taken amid coral reefs off Puerto Rico, gives viewers — divers and non-divers alike — a look at the beauty and mystery that lie beneath the surface of the sea.

Assigned to the film by Aetna were James F. Goyette, head of the companies' public safety education activities, acting as producer; Malcolm M. Snyder, who handled sound and

Diving students practice use of Scuba equip in pool while instructors hover in backgro

still photography; Arthur J. Garatti, hea cameraman, and Richard F. Schudde production coordinator and photogra Warren Murray was writer and directo Akos Kitsek of Delta Films was retain underwater photographer. Walter Henric represented the Underwater Society of Ame ca as technical advisor. The cast included Jim Thorne, a Scuba expert who also assi with underwater photography.

Techniques for Underwater Photograph

Fun 'N Fathoms was shot on 16mm Ek chrome using Arriflex, Auricon and Cine cial cameras for surface shooting. A Bolex in underwater housing was used water. Since objects appear one-third underwater, a 12mm lens was used in m diving sequences.

Aetna Life's crew found that differenc tween regular and underwater productio legion and were compounded by the rem ness of the location. Many of the probl were anticipated in planning conferenc Hartford, but on-the-spot improvisatio necessary to solve others.

Because of the uncertainties of underw filming, each day's rushes were air exp to New York for processing and viewed crew on their return three days later to mine re-shoots.

Fun 'N Fathoms will be made availa nationally for free-loan showings before church and other community organizatio and for public service television pro ming via Aetna's home office library.

Three heads are worse than one when they begin to work out vacation plans. There's trouble ahead for the airline travel coordinator . . .

Travelers Can Be More Fun Than People...

The Care and Trentment of "Strangers in Paradise" for Pan Am Reservation Agents

SPOSOR: Pan American World Airways.
TITLE: *Strangers in Paradise,* 30 min, b&w, produced by Henry Strauss & Company.

☆ Take Mr. Bangor . . . a business man . . . hurried, harassed, and sometimes hot-tempered.

Take a couple of honeymooners blissfully in the clouds until they're brought down to earth by an unintentional human error.

Take a trio of school-teachers looking for culture mixed with camaraderie.

Take Mr. Newton . . . his wife, his son, and his daughter . . . who want to go four different places together, but all at the same time.

Sounds a bit like "one for the money, two for the show, three to get ready and four to go". But far from being a game, it's a very serious matter for the telephone reservations agents of Pan American World Airways who must take problems like these in their stride every jet-propelled hour of the working day.

The Satisfaction of a Job Well Done

That it can be done successfully . . . and that doing it can be an exciting, satisfying job . . . is the theme of *Strangers in Paradise,* a motion picture produced for Pan Am by Henry Strauss & Company.

Though the motion picture is "black and white", the problems it presents run the full spectrum of opportunity and challenge characteristic of the real-life situations Reservations Agents must learn to handle. And the people it depicts come alive in a way calculated to sensitize the audience to the fact that every voice on a telephone represents a very human being . . . a stranger in the shiny new paradise of jet travel.

Opens on a *Tidal Wave* of Questions!

Theme and treatment are characterized in the film's animated opening section where, over fresh and highly stylized artwork, we hear a counterpoint of voices pouring out a tidal wave of questions in a dozen different languages.

"There are times", says the narrator, underscoring the theme of orderly confusion, "when we could use four hands and two heads . . . and times when some of us act as if we had two heads . . . but by and large we do a job and we're proud of it."

Little doubt is left as to exactly what he means, as the film goes "live" on Mr. Bangor, the businessmen, and we're plunged, along with the Reservations Agent who takes his call, into a touch-and-go situation that could blow sky-high. It doesn't . . . because the Agent handling the call can himself call upon a reservoir of knowledge and tact that reduces the problem and the customer's anxiety to manageable terms.

In similar sequences . . . with dissolves, blackouts, music, and other technical devices giving a feeling for the pace and pressure of the job . . . we watch Mr. Newton's family throw him for a loss and a Pan Am Agent put him back on his feet. We see how a few calm words and some professional advice get the three school teachers thinking as one with the travel agent who's trying to plan their trip. And we learn . . . without being told in so many words . . . that an angry voice doesn't necessarily mean an angry man . . . that conflicting ideas can often be reconciled by a single simple key . . . that this kind of selling can be most rewarding when viewed as the opportunity to enjoy never-to-be forgotten experiences.

They're Not *All* Paragons at Pan Am

The Pan Am Agents aren't all paragons . . . they include such unforgettable (to the customer) types as Brushoff Bertie, Neglectful Ned, Gossipy Gertie, and Fuzzy Frank who get lost in some "paradise" of their own while the prospect stews in a far less pleasant place. By the same token, not all prospects appear to be the kind of angels you'd expect to find in Paradise.

But good training cases in-point are made with these incidents and people. And Strauss has designed the film as a whole in such a way that the audience will come away with the realization that each flickering light on the switchboard is "somebody" . . . a person whose life will be made richer or poorer by the way the Reservations Agent does his or her job.

Strangers in Paradise has been selected by the National Association of Manufacturers as one of 15 motion pictures representing American business and industry in the Third International Industrial Film Festival to be held this year in West Berlin under the patronage of the Council of European Industrial Federations.

New officers of Association were introduced at the Convention session.

23rd National Audio-Visual Convention and Trade Show Draws 3,500 at Chicago

Dealers Elect Harold A. Fischer to Lead Their Association

USERS OF SIGHT/SOUND media in business and industry joined with groups representing the nation's schools and churches to participate in the 23rd National Audio-Visual Convention and trade show held in Chicago's Hotel Morrison in late July. Sponsor host was the National Audio-Visual Association, whose dealer-distributor members elected Harold A. Fischer of Orlando, Florida as the organization's president for the coming year.

Theme of this year's convention was "Audio-Visuals in the Space Age," and general sessions on "The Science of Space Age Selling" and "Orbiting A-V Teacher Training," were followed by a principal address, "Space Age: Opportunity Unlimited" by Dr. Carl S. Winters of the Lecture Staff, General Motors Corporation. Exhibits of some 175 manufacturers and producers of audio-visual equipment and materials featured the latest in automatic projection, learning machines, automatic test scorers and a multitude of new films and other visual media. Attendance at the five-day program was estimated to exceed 3,500.

Members of the Industrial Audio-Visual Association and of the National Visual Presentation Association held special sessions and an A-V Workshop for Industrial Training Directors was a further business-industry event. Heads of audio-visual departments in medical, dental and allied professional fields held their annual A-V Conference of the Medical and Allied Sciences. School problems were emphasized at the Audio-Visual Education Forum for a-v directors from schools and universities while the Department of Audio-Visual Instruction (NEA) brought together presidents an presidents-elect of state and loc a-v associations for a special hea ing.

An annual feature of the Con vention was the meeting of t In dustry and Business Council o NA VA, headed by Chairman Hbe P. Abrams of Philadelphia. Juc speakers at the Council's mtin this year included William C ne ly, president of the National su Presentation Association an als Philip Harrison, publisher of ial

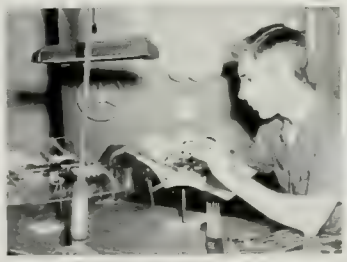
They Help Train the People of United

Aware of Company's Needs, United Airlines' Motion Picture Unit Supplies Realistic Solutions

LIKE ITS FAMED JET "Mainliners" which flash across U. S. skies, the films of United Airlines have flown high, wide and handsomely to millions of viewers in public audiences. Pictures like *Office in the Sky*, *Holiday in Hawaii* and *California, a World in a Week* have been created by production specialists like Cate & McGlone and are nationally distributed by Modern Talking Picture Service, Inc.

But there's another, often less glamorous but *vitally important* side to United's picture story.



Focus on Employee Training

Behind the scenes, within the company itself, the men and women of United's Education and Training Department focus on the important tasks of *employee training*. The Technical Training Division of this department is located at United's sprawling San Francisco maintenance base.

It is this Division that is responsible for training aids that range from the thousands of glossy prints used in United's training bulletins, manuals and other publications; for additional thousands of photos used for overhead projection transparencies that illuminate screens in company classrooms. And additional thousands of 35mm color slides are turned out for use in aircraft systems' training and for programmed instructional courses.

Explaining Complex Devices

Also designed and built at San Francisco are three-dimensional plexiglass "projectible" trainers.

Animated projectible trainers are made of plastic, metal and paint.

Projecting on screens via overhead equipment, these trainers show (in simplified form) the relationships of complex moving parts. Over 400 of these units are in use in shops of United Airlines across the country.

Graphic illustration unit in the Technical Training Division supplies art.

Professional instructors, writers, artists and technicians make up United's production staff within the Division. Part of their number is the company's three-man motion picture unit, headed by producer-director Ira Thatcher. With the services of the entire Division to draw upon, the unit averages about 25 films per year.

These internal training subjects are of consistently high calibre; several have won national honors. Most recent of these was the Finalist Award given *In Your Hands* by the Industry Film Producers Association (BUSINESS SCREEN, [illegible] 1962). Donald L. McD[illegible] Manager, Technical Traini[illegible] United, received the IFPA [illegible] on June 16th. United's Drs. [illegible] Kidera and E. A. Some are motivational. Others are carefully designed tools to be used in operations and maintenance training programs. Management report films make up a fourth category.

Here Are Recent Pictures

The following list of recent titles produced by the Motion Picture Unit illustrates the diversified use of films by United: *Your Hearing and Jet Age Noise; B-720 Oxygen System; Engine Bearing Handling; Hand Signals for Ground Handling of Aircraft; Nose Gear Animation; Air Freight; Modern Plastics; Introduction to Caravelle Jet Mainliner; In Your Hands* (Flight Kitchen Sanitation); *In-Flight Passenger Service; Moment of Decision* (Safety Indoctrination).

United's motion picture unit writes scripts, shoots the scenes, edits the film, and conforms the master rolls. Outside labs and service companies are used for film processing, printing, sound and music recording.

films are edited, cut and matched in two cutting rooms like this. music, processing and printing are provided by outside suppliers.

A New Film Series on Newspaper Profession

Copley Newspapers' First Film Is "What Greater Challenge"

☆ The world of newspaper publishing is being transferred to the screen. Copley Productions, the motion picture division of the Copley Newspapers, is now in production of an exciting 14-part film series on the newspaper profession.

The initial film, *What Greater Challenge*, is geared to high school and college journalism classes.

Background on Publishing

Produced as an introduction into the world of newspaper publishing, this film shows the varied talents and skills so necessary in producing the continuing chain of news we find in newspapers. Dedication of newspaper people to protecting the freedom of the press is emphasized.

Extensive research was conducted in some of the nation's largest dailies to capture the feeling of newspaper publishers and the world they have created.

Ray Sperry, script writer, John Schaaf, director-cameraman, and Howard Matson, producer-manager of Copley Productions, undertook numerous tours of the San Diego Union and Evening Tribune newspapers, searching out the details of each person's job and to learn their reasons for becoming newspapermen and women. The series will cover thoroughly each technological and creative skill.

Career Guide to Journalism

This series will be rewarding to students who are considering any aspect of the newspaper profession as their life work.

More than 80 individuals and 40 specific locations representing all newspaper trades were used in this 10-minute motion picture.

Series to Show Functions

The Copley newspapers will produce an entire series showing each of the more general professional functions on a newspaper. These will cover classified advertising, general assignment reporting, press photography, the pressman, display advertising, and other key phases.

To date, more than 480 high school and college groups and 300 newspapers have seen previous Copley productions covering other aspects of newspaper operations.

"Improved newspapers will help to make a better world," believes James S. Copley, chairman of the corporation publishing Copley Newspapers.

Inquiries about this series may be directed to The San Diego Union and Evening Tribune newspapers, San Diego, Calif.

Film on Mental Retardation

☆ The Selinsgrove State School, in Selinsgrove, Pennsylvania, will be the scene of a new motion picture on the subject of mental retardation to be produced by Vision Associates under a special grant from Smith Kline and French Laboratories. The new film, to be called *The Toymaker*, will be photographed early in September. Lee R. Bobker will direct the film which will be written by Richard Wormser and co-produced by Helen R. Kristt.

Members of the Motion Picture Division of the Copley Newspapers pictured at the start of production on "What Greater Challenge," first of a series.

Taking feeders of its beef cattle to the ranches of Nebraska's famed Sandhills area, "God's Own Cow Country" pictures breeding of choice herds.

The Sandhills Beef Story

Max Howe Knows, Shows a Real West

SPONSOR: Sandhill Cattle Association

TITLE: *God's Own Cow Country*, 27 min., color, produced by Max Howe Film Productions.

☆ Nebraska's famed Sandhills, an area of some 24,000 square miles embracing upwards of 15 million acres of abundant water and verdant grass, it's outstanding beef cattle and the men and women who produce the state's No. 1 product, are impressively shown in *God's Own Cow Country*.

Produced by Max Howe for the Sandhills Cattle Association, the film took approximately a year to make and called for more than 10,000 miles of travel over the Sandhills area. It depicts seasonal and various other operations that go into the production of feeder cattle of different breeds and deeply into the over-all story of Nebr ranching industry.

God's Own Cow Country doesn't on any one particular phase of the ra industry nor does it dwell on any par place or ranch in the area. Film footag compiled at a number of ranches loca all parts of the Sandhills region.

The story is of grass, water and catt it shows how ranchers in the Sandhill with the help of grass and water . . . p the thousands of cattle that move off hills grass each year for fattening in f of the Corn Belt and elsewhere.

The Sandhill Cattle Association has the picture in order to inform cattle and others outside of the area, about t and work of the Sandhills rancher and t sons that Sandhill cattle are famous.

Speaking Up on Medic

A.M.A. Cartoon Alerts John Q. Pub

SPONSOR: The American Medical Asso

TITLE: *The Return of Horsehide Hoo* min, color, produced by Image Produ

☆ Horsehide Hooper gets his men and men, too. In fact he knocks off his a right down the line.

Who's Horsehide Hooper? He's an a cartoon character — a device employed American Medical Association as one ways in which its position on medical c the aged was brought to the attention general public.

In the film, Horsehide comes upon his son, Harvey Hooper (typical American as he is about to sign a petition endors Administration's King-Anderson Bill fo cal care for the aged.

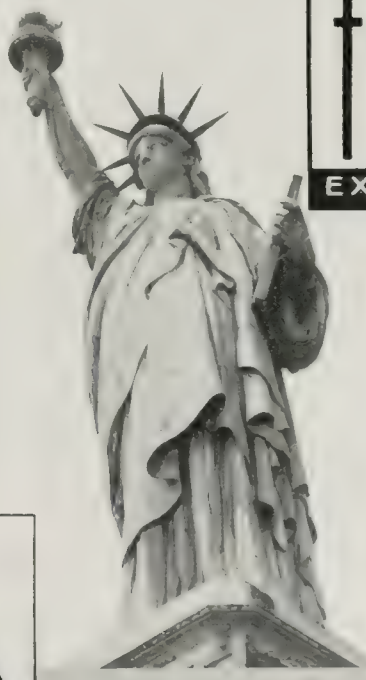
Lights . . . action . . . camera. Ho stops his grandson cold with this proclam "In my day, people were more self-a ent."

Eventually, he convinces Harvey t should write to his congressman, but ins doing as he had planned, he should u congressman's support for the AMA-ap Kerr-Mills bill.

At gun-point of such persuasive acti vey is convinced, changes his view writes his congressman.

Horsehide has won again!

The 15-minute, 16mm color and an film was produced by Earl Klein for Productions, a division of Animation, I Hollywood.



This widely-distributed subject, titl *Return of Horsehide Hooper*, was rele the Radio, Television and Motion pict partment of the AMA. Director of this ment is Richard Reinauer.

"This film accomplished the purpose planned for it," said Reinauer.

"We chose animation as a vehicle story, since we felt that people would m ber the pertinent facts and retain them than if they were presented by a non-a technique. The American Medical Ass feels that this film fulfilled its mission.

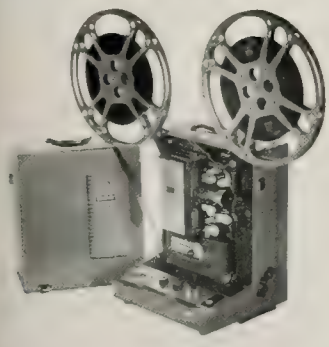
The 6th Annual

INDUSTRIAL film & AUDIO-VISUAL EXHIBITION

2nd INTERNATIONAL FILM FESTIVAL OF NEW YORK

SEPTEMBER 25-27, 1962

AT THE
BARBIZON PLAZA HOTEL
CENTRAL PARK SO. AT SIXTH AVE., N.Y.C.



PRESENTED BY
INDUSTRIAL EXHIBITIONS, INC.
17 EAST 45th STREET, N. Y. 17, N. Y.

Inflight Motion Pictures, Inc. needed a reliable 16mm ɔjector for TWA, that would run without any operator at all

ɣot it, using Kodak Pageant 16mm pro- components.

projector had to be so automatic and so ɒtely reliable that, with the flick of a in a TWA SuperJet plane cockpit, the ould start, run uninterrupted for as long hours, and then stop.

You can imagine how utterly dependable that projector has to be.

TWA SuperJets have them, showing first-run movies in flight.

Using Kodak Pageant 16mm projector components, Inflight Motion Pictures, Inc., worked with Reevesound Company, Inc., to design this motion-picture system. Except for the "on-off" switch in the plane's cockpit, the equipment is hidden in the plane's ceiling.

The Kodak Pageant components used in this system are the same as those being used reliably in educational and business audio-visual training and sales programs everywhere. The reason is simple: *Kodak Pageant projectors work dependably whenever and wherever you want them to, with neither embarrassment to the operator nor distraction to his audience.*

If you need that kind of movie projector, ask your Kodak A-V dealer to demonstrate the new Kodak Pageant 16mm sound projector, AV-126-TR, shown on the left. Or write for specification Bulletin V3-65.

KODAK PAGEANT Projector 〉 **EASTMAN KODAK COMPANY,** Dept. 8-V, Rochester 4, N. Y.

Noon-hour films selected by Jersey Standard's Ernie Whitfield are warmly received by Standard Club audience.

Noon Hour Is Show-Time at Jersey Standard

Weekly Film Programs Get SRO Audience of Office People in Company's Standard Club Screening Room in Manhattan

STANDARD OIL COMPANY (NJ) has been showing films to office employees at the New York City headquarters during lunch hours for the past 16 years. The weekly film programs, which have an entirely voluntary attendance, are shown every Thursday noon to an average audience of 120.

Jersey Standard began the lunch-hour programs originally as an employee participating activity to provide interest and amusement for diners in the company's Standard Club. Over the years, the program has become increasingly popular, regularly showing a tasty variety of general interest films with emphasis on travel and sports, but also including new company films and public service pictures thought to be of wide interest.

In charge of the lunch-hour movies is Ernest W. Whitfield, a specialist in audio-visual activities at Jersey Standard for many years. Mr. Whitfield selects films to be shown, under the guidance of a Standard Club committee. He also supervises projection at four separate showings held each Thursday.

Some recent and typical selections have been *Europe With Frontiers* (European Community Common Market); *Hold High the Torch* (U.S. Olympic Committee) and *To Smoke or Not to Smoke* (Cancer Research Society).

Screen Visits Around World

During the past year, Jersey Standard audiences have been around the world in the travel films of Israel, Libya, Switzerland, Japan and many others. They have toured the states in the Esso "States" series, and dropped in for friendly visits to associates in Great Britain — *Pembrokeshire — My County*, sponsored by Esso Standard, Ltd.

To find a continuous supply of top notch film fare, Ernest Whitfield has one of the most extensive collections of film catalogs in the city. Besides the old faithful regular suppliers such as Association Films, Modern Talking Picture Service, Sterling Movies U. S. A., and the New York Public Library, Mr. Whitfield has several dozen other sources, both free and rental, upon which he draws.

Films Go to Company Picnic

In addition to the lunch hour programs, films always go along on the Company picnic "in case of rain." Ernie Whitfield produces an annual 16mm *Jamboree Movie* of this event, complete with co[lor] sound. It, naturally, is the [most] popular film of the year.

To promote the lunch ho[ur] programs, future attractio[ns] regularly published in "Esso [Re]hattan", the company ma[gazine]. One hundred and fifty fly[ers] out in inter-office mail, an[d] ters go on the bulletin boa[rd].

Equipment in the Standar[d Club] includes two Bell & Howell [16mm] projectors in the booth, an[d] for 80 to 90 in the audience.

They Like Their Movie[s]

The company experim[ented] closed down the lunch-hou[r] for a few weeks several yea[rs] ag[o]. But the howls of protest we[re] mediate, loud and strong, ar[e] have been regular popula[r] ever since.

The company feels the p[ro]g[ram] has been good for employe[e] ale, and useful in supply[ing] formation about the com[pany] world-wide activities. Ho[w] Ernest Whitfield says hi[s] guide to what is popular an[d] er for his lunch-hour audie[nce] good taste. He avoids all k[inds] advertising (even Esso a[d]ing) and all forms of preach[ing] social or otherwise.

Audience Builder for the Business Film

Landers Associates Help Sponsors Develop New Audiences

THERE ARE RICH VEINS of unexplored audiences for business and industrial motion pictures, according to one "resource" authority who is making a business of opening veritable new "mines" of viewers for useful pictures.

Producers and sponsors of these films should ask themselves these important questions:

1. How can *your* picture "pay-off" for its production cost?

2. Have you set up distribution objectives, based on sound measurement of real audience potential, at the outset of production?

3. Have you re-checked existing films to determine if *all* audience potentials have been fully realized?

Measuring Appeal, Retention

Inherent within these questions are such measurements as (a) the general appeal of your picture; (b) its *specific* appeal; (c) its ability to carry an important message for the viewer, plus a retained image of your message.

Question No. 4: "Where can you get the correct evaluation, experienced consultation on content potentials and recommendation for the greatest potential of distribution to specialized groups?"

Helps Provide the Answers

Answers to these questions are the business of a unique and highly useful "resource" authority, Bertha Landers. She directs the Landers Educational Film Center, known as Landers Associates, which headquarters at 4930 Coliseum Street, in Los Angeles.

Here's an example of how Miss Landers helps to open new markets for a specific industrial film. When Pyramid Films conceived the production of *That They May Live*, their plan called for a film to orient industrial employees toward a new appliance to be used in industrial accident work.

Educational Potential Noted

Perhaps, Pyramid was unaware that the film had a great potential in the school market. That's where Landers Associates came into the picture. They immediately saw the educational potential in the picture and arranged for a screening and consulting session at their film center.

The result of the consultation was a suggestion that the picture could be used effectively in safety, health, physical education and related courses in schools, colleges and public institutional programs. Landers Associates advised that maximum school use could be assured if the film was shortened to meet the demands of classroom period schedules.

The producers at Pyramid accepted the recommendations and released a short 19-minute film for schools. The Landers evaluation service was the smaller half contributing to the success of this project. The real action started with the preparation and mailing from a selected list to audio-visual directors in schools, colleges, universities, libraries and other public institutions — the key people who have authority to acquire films.

The results of this first mailing brought a response of more than 12 per cent. Within a year, Pyramid had placed more than 300 prints in educational film libraries throughout the country.

Of course, the film *That They May Live* with its theme of life-saving is a universally appealing subject. However, Landers Service was invaluable in solving the problem of getting the film to the maximum of its potential audience.

An Authority on 16mm Films

Bertha Landers is an outstanding authority on 16mm films, whose experience includes service with the Office of War Information in World War II. She is editor and publisher of the Landers Film Review Service, author of numerous articles for professional periodicals, editor and compiler of a reference source guide on foreign languages, and has served as a film evaluator for FILM NEWS and the SATURDAY REVIEW.

She pioneered films in the public library field, organized and directed three film departments (Dallas, Peoria and Kansas City). She is a first-rate painter, etcher and lithographer, who has had shows and work in museums and private collections throughout the country.

Bertha Landers directs work of Landers Educational Film Center

A Field for the Specialist

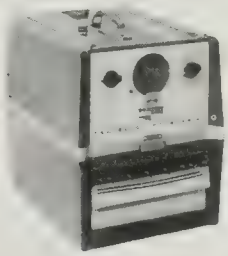
"Bim" Landers believes that "more and more producers of industry films are beginning to realize that the search for new realms of distribution is a form of specialized knowledge and research in itself. These areas are constantly being opened, and no producer can be expected to be aware of all of them."

That's the reason she's increasing her staff, not only to uncover these new areas but also to understand how they may be exploited for each new film.

Other Useful Film Services

Other activities of the Landers Film Center include compiling of film lists on special subjects such as: safety, employer-employee relations, training, selling, and so forth; preparing study guides; preparing film programs.

Recently, the Landers staff organized a department to see out the so-called "lost film" made by the independent producer who is either unaware or unable to find distribution for his product.



Inquiries from producers and sponsors of business films and those numerous "special" pictures for public, community and assembly room use are welcomed by Landers Associates. You can reach this useful service organization at 4930 Coliseum Street, Los Angeles 16, California.

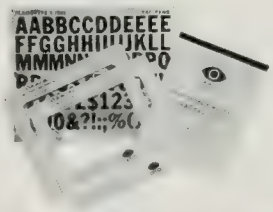
Ozalid sets the world's standard for overhead projection



Projecto-Printer® 40 makes perfect transparencies from maps, pictures or drawings in minutes.

Vary transparencies with 14 basic image and background colors on Projecto-Viewfoils and other Ozalid specialty films.

Ozalid accessories include Projecto-Mounts, tracing pads, re-usable Planotype lettering, and other tools —to make any job easier.

New Porta-Lite 7 makes the Ozalid
OVERHEAD PROJECTION SYSTEM
more effective than ever!

Everyone grasps your ideas faster . . . understands more clearly when you project 7 x 7 inch color transparencies *in full room light* with the revolutionary new Porta-Lite 7—the smallest, brightest, ready-to-use portable overhead projector ever designed! Or use the compact new Porta-Lite 10, companion to the Porta-Lite 7 for 10 x 10 inch transparencies. Both Porta-Lite projectors stay set up always—there's no assembly. A single handgrip and aluminum-light construction makes them easy to carry. Prepare transparencies on color foils in minutes with the Ozalid® Projecto-Printer 40 or the Ozalid Diazo copier in your repro department. Everything—foils, mounts, lettering, processors, projectors—to meet any overhead projection requirement is yours from Ozalid.

THE INDUSTRY FILM JOURNAL

National News-Letter of the Industry Film Producers Association

Here's Pattern for Your Monthly Programs

Southern California Reviews Meeting Agenda of Past Year

OCCURRING AT THE RATE of 12 per year (as opposed to 24 per second), the overall kaleidoscopic pattern of IFPA Chapter programs is often overlooked.

Here, as reported by Don Whaley, retiring Program Chairman, Southern California Chapter, is a quick review of the significant and highly successful programs he planned and arranged:

* * *

"Generally meeting on the first Monday evening of every month, the Southern California Chapter started the year's lineup last SEPTEMBER with a salute to Naval Aviation on its fiftieth anniversary. An appropriate film was shown and the guest speaker was Rear Admiral A. Donald Fraser, USN (Ret.) who was head of naval photography. At that meeting Ray Grant of Eastman Kodak displayed the new Eastman 16 Reflex Camera.

* * *

"The OCTOBER meeting was aided by our National President, Dr. Raymond E. Fielding of U. C. L. A.'s Cinema Department, who presented and discussed the contrivance of Nazi newsreels during the decade 1933 to 1943.

* * *

"The Lytle Corporation sound stage was the location for the NOVEMBER meeting where members and guests were treated to a taste of the thrills experienced by the skydivers of Para-ventures who do the parachute and free-fall special effects for the Ivan Tors-ZIV television series, "Ripcord".

* * *

"In DECEMBER, in keeping with the holiday spirit, Bob Hecker moderated a collection of bloopers and gag reels assembled for that evening. The scene was the sound stage of Parthenon Pictures and our host, Charles A. Palmer, opened the session with a talk on scripting, its research, preparation, writing and interpretation.

* * *

"JANUARY saw us gathering at the System Development Corporation where Dr. William H. Allen spoke to us on "What research has to say to the film producer". This was followed by SDC films on computer language and automated teaching plus a first public showing of their new five-minute security film, produced in a light vein, *Never Trust a Yankee*.

* * *

"The FEBRUARY meeting was hosted by Robert J. Gunther, IFPA Past President and Supervisor of Motion Pictures at North American's L. A. Division. That evening films and speakers from each NAA division told us of their individual philosophy and approach to motion picture production.

* * *

"In MARCH we were guests of Birns & Sawyer where we heard Bruce Hershensohn discuss his film, *Karma*, which he produced for the International Communications Foundation. Following screening of the film we were given a demonstration of the new Sylvania Professional Sun Gun Light.

* * *

"The APRIL session was hosted by Glen Glenn Sound Company who displayed their color television camera chain with video tape playback. Featured that evening was Sidney P. Solow of Consolidated Film Industries introducing the new Eastman Color 16mm Negative stock and showing samples of "daily" prints made by various methods of duplication. Also shown that night were the Academy Award winning cartoon, *Ersatz*, and Bruce Hershensohn's *Towers of Canaveral* by popular request following the tremendous reception given his Indian film, *Karama*, at our previous meeting.

* * *

"The MAY meeting was held at Television City where the show *CBS Reports: Death in the City Room* was presented and discussed by its producer, John F. Beck and the cameraman, Wade Bingham. Together they told us of some of the challenges and production problems surrounding the filming of this show.

Delaware Valley members at underwater session (l to r): Roy Zeper, Philco; Val Berzins, Lowell Shaffer, Bill Nichols, Frank Weikel, Jim Seeley, Ed Howell, RCA. (Front): John Harm, Curtis; Ray Rock, GE; Hugh Collins, RCA; Joe Sanford, CECO; Harry Hance, GE; and chairman-host Pete Stallings are at poolside.

Underwater Camera Session Helps Delaware Beat the Heat

☆ The Delaware Valley Chapter, combating the summer heat and the lure of nearby mountains, combined the appeal of a poolside picnic, and an extracurricular interest in underwater photography into one of its best meetings of the year.

Joe Sanford (Camera Equipment Company), guest speaker for the occasion, provided the underwater photography demonstration with the aid of skin divers Harry Hance and Walt Noetcel of General Electric.

The use of the Bolex housing in the production of underwater films was shown, and the general subject of underwater equipment discussed in depth.

With most of the Delaware Valley members primarily involved in medicine, missiles, and electronics, the technical discussion proved an eyeopener on the problems encountered in underwater photographic work.

In tracing the history of the development of the underwater cameras from the early days of World War Two to the present highly sophisticated devices, Sanford drew heavily on his experience with the U. S. Navy. He also provided a commentary on the underwater photography techniques used in the film, *Secret Cargo*, which concluded the program.

Ron McNally, RCA, examines underwater Bolex as John Harm (r), Curtis, awaits his turn (see above).

Barbeque follows Delaware's camera session as Frank Weikel dishes up weiners for (l to r) Val Berzins, Ray Rock and Pete Stallings. Ed Howell hovers in background.

Delaware Valley Chapter Alerts Members in Monthly Newsletter

☆ As part of a continuing effort to stimulate interest in IFPA and provide better communication among its own chapter membership, the Delaware Valley Chapter began, in July, publication of a monthly newsletter, "Frame Lines."

The publication includes a condensation of the minutes of the last meeting, announcement of forthcoming meetings, biographical sketches of chapter members, and news and comments of interest to the membership.

The first issue was enthusiastically received.

News of *general* interest will be included in this section of BUSINESS SCREEN. However, the Delaware Chapter will be happy to send copies of "Frame Lines" to interested IFPA members *in other chapters*, and would like to exchange communications in this form with other chapters which are pursuing a similar program.

Write to the "Frame Lines" editor, Frank Weikel, at P. O. Box 498, Camden 1, New Jersey.

Note to Members About Editorial Contributions

☆ All copy and pictures should be submitted to your Chapter Chairman, who will then forward it to me.

The material will then be edited and forwarded to the BUSINESS SCREEN headquarters.

In this way we will have our own "magazine within a magazine," providing us with internal forum as well as a showcase to the nation.

U. of Calif. at Los Angeles

Members Hear the Story of "Friendship 7"

NEARLY ONE HUNDRED IFPA members and guests heard first hand the story behind the production of *Friendship 7*, the outstanding NASA film, documenting Astronaut John Glenn's historic space flight.

The occasion was the first regularly planned program for the new year under the direction of Brent Inman, 1962-63 Program Chairman, Southern California Chapter, IFPA.

The meeting was held in mid-July at the Birns and Sawyer's Cahuenga Tower Studio, Hollywood. Host was the staff and personnel of the Birns and Sawyer Cine Equipment Co., including Jack Birns, Clifford Sawyer and Marvin Stern.

Special guests and program participants were Eugene C. Keefer and members of his production staff from General Dynamics - Astronautics, San Diego, producers of *Friendship 7*. The meeting was opened by an introduction of the 1962-63 Southern California Chapter Officers by Gene Huggens, incoming Chapter Chairman.

Members of the hosting Birns and Sawyer organization were then introduced by Inman. They explained the logistical problems encountered as the prime suppliers of photographic equipment for this unprecedented undertaking.

Referring to a display of samples of the actual equipment used, the Birns and Sawyer staff listed the impressive volume of the project: 31 cameras with 93 lenses and 13 special lenses, 62 film magazines, 12 light tripods, 19 heavy duty tripods, one blimp, one gyro pod, several special heads and related special equipment.

To complicate this, the equipment had to be shipped and received in operational order ready for camera crews stationed in the vast network of tracking stations circling the globe. The answer was the use of 108 Halliburton carrying cases and almost a ton of foam rubber.

Evidence of the success of this aspect of the production came to light in the question — answer discussion which followed. Not one single breakdown of camera equipment occurred during the entire project.

Following this discussion, Chapter Chairman Gene Huggens introduced Eugene Keefer, Executive Producer of the film, and Assistant Director of Communications at Astronautics.

Keefer lead a discussion covering the production aspects of the project. He explained the planning, both as to content and purpose as well as pre-production that went into this historic film. The planning included a round-the-world trip by Keefer and John Hynd, Director, to reconnoiter such unknowns as the stations, people, jurisdictions, political protocol, custom requirements, etc. The story of this trip alone makes the project unique in present day documentary film production.

Bruce Herschensohn, Editor and Music Composer, then explained his contribution to the film such points as the special demand of composing a musical score for a specific target audience and purpose in mind.

Also contributing to the general discussion were John Hynd, Director; Frank Kerr, Writer; Bill McClure, Assistant Director; and Loren Steadman, Chief Sound Engineer. The question-and-answer periods reflected strong interest and concern for the planning and administrative problems encountered by the producers.

The final feature of the program was the screening of *Friends'p*. This springboarded further question and answer discussion, and the evening was concluded by Brent Inman's expression of appreciation for the contributions made by the program participants and hosts.

Pictured at "Friendship 7" session in July were (l to r): Frank Kerr, writer; John Hynd, director; program chairman Brent Inman; Eugene Keefer, executive producer; chapter head Gene Huggins; Bruce Hernschensohn, editor and composer; Loren Steadman, sound engineer; asst. editor Bill McClure.

IFPA BOOKSHELF

as Reviewed by
Dr. Raymond Fielding, UCLA

In this issue we introduce a new feature devoted to regular reviews of books of professional interest to IFPA.

FOCAL ENCYCLOPEDIA OF PHOTOGRAPHY

Desk Edition, Macmillan Company, 1960 (Focal Press Series) 1298 pages, $6.95.

☆ Motion picture and still photographers alike will find a rich store of both theoretical and practical information in this valuable reference work. New standards of concisiveness and inclusiveness are reached when the larger Library edition of the encyclopedia was published in 1956.

Considerable abridgement of the original work was necessary in the preparation of this compact edition, of course; still, the essential size version emerges as a reference work of formidable proportions. Over 2,000 entries are presented in its 1300 pages — the work of nearly 200 international experts in the fields of motion pictures and still photography.

Both practical how-to-do articles and esoteric explanations of photochemical and optical theory are provided, together with handy the tables, measures, conversions and statistics which the photographer might wish to employ in professional work.

The text is clearly written and well printed, although the paper rather thin for use in an enclo

di and the binding is not as re as it might be.

Comprehensive Filmtreat Opens a Service Center in Hollywood

☆ In order to serve motion picture producers, laboratories, distributors and film libraries on the West Coast more effectively, Comprehensive Filmtreat has opened a service center at 829 North Highland Avenue, Hollywood.

Comprehensive Filmtreat, a well-known rejuvenation service in New York for the past 30 years, renews film images which have become marred by wear and scratches. The Comprehensive rejuvenation processes remove scratches and abrasions on both the emulsion and celluloid sides of negatives and positives.

New Catalog of Stock Shots Released by Fotosonic, Inc.

☆ A catalog of motion picture stock shots has just been released by Fotosonic, Inc., New York. The book is cross-indexed for easy reference and is set up to be of help at the planning stage of a film project. Photographed in 35mm Eastman color, the stock shots are available in 16mm and 35mm, color and b w.

The scenes are contemporary and are related to everyday events such as family life, children playing, snow scenes, suburban activities, etc. There is also extensive coverage of a variety of activities in this country and abroad. Another departure is that pictures can be viewed on positive 16mm check prints, which eliminates the practice of making selections from original negatives — difficult on one hand, and— damaging to negatives on the other.

The Fotosonic catalog is broken down into 33 categories for simplified selection of needed stock shots. It is being distributed to 3,000 advertising agencies, producers and film editors nationally and in Canada. For copy, write our Reference Desk.

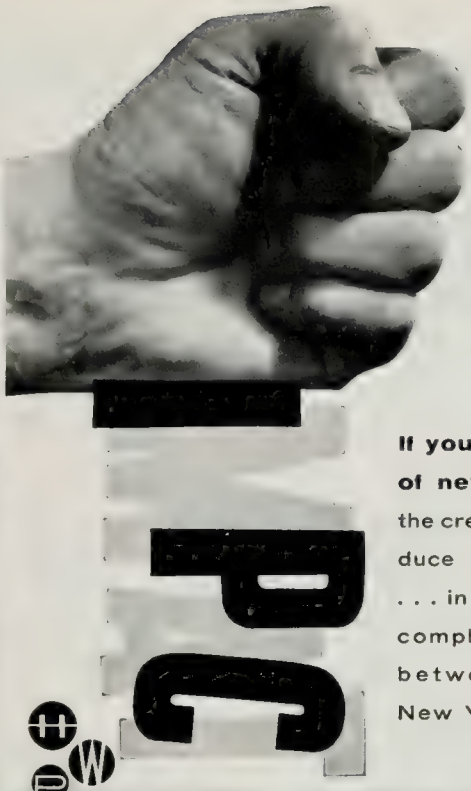
New Tuberculosis Assn. Film To Help Fight Public Apathy

☆ *The Anatomy of a Disease* is a new film produced for the National Tuberculosis Association as part of its continuing program of public education in the area of tuberculosis detection, treatment and research. The purpose of the quarter-hour color motion picture is to overcome current public apathy towards the disease and restore its awareness to the fact that tuberculosis is still a formidable enemy.

Actor Fred Scollay portrays role of chief physician in new TB picture.

Anatomy of a Disease is sharply focussed on the fact and fiction of TB today, and provides an impressive cinematic journey through diagnosis and treatment of the disease. The dramatizations of three typical case histories provide the basis of the story, which was photographed on location at Grasslands Hospital, Westchester County, New York.



Anatomy of a Disease was produced by Vision Associates, written by Ralph Schoolman and directed by Lee R. Bobker. It will be made available for community showings on request to local Tuberculosis Associations, nationwide.

"Progress for Freedom" Shows President's Trip to Mexico

☆ The visit of President and Mrs. John F. Kennedy to Mexico is the subject of a 20-minute color film dramatizing the Alliance for Progress and traditions common to the U. S. and Latin America. Titled, *Progress for Freedom,* it was released in theaters throughout Latin America during August. Jose Ferrer narrates; Leo Seltzer (who also directed films on Mrs. Kennedy's trip to India and Pakistan) supervised the picture for the United States Information Agency.

Following theatrical distribution, the film will be shown by USIS mobile units in remote areas, at USIS centers and by local groups via 16mm print loans.

If you want the IMPACT of new ideas we have the creative hands to produce resounding results . . . in the largest, most complete new facilities between Detroit and New York.

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

Inventor/consultant David Pollan

David Pollan Joins Reevesound as Chief Engineer of Company

☆ Inventor-consultant David Pollan has joined the Reevesound Company as Chief Engineer. Announcement of the prominent scientist's association with Reeves Soundcraft Corporation's Long Island City subsidiary was made by Revesound President Boyce Nemec.

An expert in projection optics, Mr. Pollan headed the design group which created Reevesound's unique motion picture optical devices now in regular operation in the Federal Science Pavilion at the Seattle World's Fair.

As an engineering executive at Viewlex, Inc. in former years Mr. Pollan created a complete line of projection systems for military, professional and amateur use, as well as a number of the earliest basic teaching machines and special training devices for the U. S. Navy. A stereo range-finding and training instrument which he developed during this period is now widely used by the U. S. Army.

Delighted with the performance of his motion picture devices at the Seattle Fair, Dave Pollan is now energetically engaged in the creation of still more unique systems to be unveiled at the forthcoming New York World's Fair.

☆ Arthur Florman, president of Florman & Babb, Inc., New York, and Joseph Dougherty, of DuPont's Motion Picture Film Department, New York, spent several days last month at Cape Canaveral as guests of Col. William Sheahan, Manager of the Missile Range Photographic Section.

According to Arthur Florman, the extensive Cape Canaveral photographic activity, operated under contract to RCA, plays a vital role in assessing the results of missile firing. During the first 80 seconds — about 8,000 feet — of each flight, measurements are made on high-speed motion picture cameras which are calibrated and marked in milliseconds of time.

Florman and Dougherty later went on to visit the newly building photographic section at the General Marshall Space Flight Center near New Orleans, under the management of Norman Garrell, a former foreign correspondent and newsreel cameraman for Fox Movietone News.

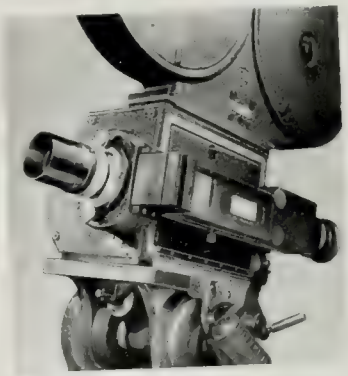
Ceco's Reflex Viewing System for 35 Mitchell, B&H Cameras

☆ A new design to incorporate reflex viewing in Mitchell and Bell & Howell professional motion picture cameras has been announced by Camera Equipment Company, New York. According to Burton Grodin, Ceco Director of Sales, these cameras can now be modified for reflex through-the-lens focusing and viewing — thus eliminating parallax problems.

Ceco engineers have re-designed the Mitchell 35mm High Speed, NC, Bell & Howell standard and Eyemo cameras to accommodate an image diverter system which has taken more than three years to perfect.



The resultant optical system is said to be free from aberrations, coma, color shift, image de-gradation and other optical defects, which heretofore have made some beam-splitters impractical for motion picture cameras.

The Ceco reflex modification eliminates the rack-over assembly from the Mitchell and Bell & Howell standard camera. Where the Mitchell 4-lens turret is removed and a single-lens receptacle is supplied, the entire "L" casting can be eliminated, thus reducing the camera weight appreciably.

The diverted image is magnified approximately ten times through the viewer and it appears on a full aperture ground glass which allows the operator to focus and view continually while shooting even at minimal light levels. There is no flicker apparent in the finder system during camera operation.

A series of exhaustive exposure tests have been made with the reflex-converted cameras. They reveal that no loss of resolution or contrast, no increased fall-off at the edges of the frame and no color shift or de-gradation occurs when color film is exposed.

The results of further tests indicate that no iris compensation need be made where the light level is above 125 foot-candles. In low light situations, a ¼ stop increase in exposure should be made.

35mm Mitchell NC with reflex modification, single lens turret.

When the modification is applied to the Bell & Howell Eyemo camera, the positive view finder objective assembly may be eliminated along with the parallax correction control knob. The shift-over alignment gauge for the Model Q is also rendered obselete as well as the need to rotate the lens turret when lining up for a shot. It is said that the Eyemo becomes a much faster operating camera and should be welcomed by newsreelmen as well as by producers who must move fast to capture uncontrolled action and current events.

Because of the simplicity of its design, the Ceco reflex modification can also be made on other types of cameras.

Use our Request Form in box opposite. Check NP = 1.

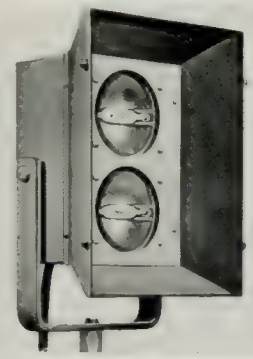
Kliegl's Lilliput Twin Lights Distributed by Florman & Babb

☆ A new Lilliput Twin lighting unit manufactured by Kliegl Brothers will be distributed exclusively by Florman & Babb, Inc., 68 West 45th Street, New York.



The Lilliput Twin delivers the same intensity flood-lighting as a five kilowatt fresnel light without requiring a booster transformer. It uses new 16-hour General Electric sealed-beam quartz-iodine lamps and comes equipped with a dim-bright device and a barn door. The sockets swivel to permit use in eight horizontal or vertical positions and a single light beam can be achieved due to a special adjustment device.

The Lilliput Twin (without lamps) is priced at $115. Lamps are $9.95 each. Check Request Form NP =7 in form below.

* * *

Pictronics' Nova-Twin Offers High Intensity Light Source

☆ A new high intensity portable light source is being offered by Pictronics Corp., New York. Called the Nova-Twin, the kit includes

Here's new portable Nova-Twin

two light fixtures offering 18,000 watts, two stands, and two 25 foot 3-wire grounded heavy-duty extension cords.

Providing maximum light with minimum electrical current, the Nova-Twin requires no transformers to provide extremelight levels. The complete kit weighs only 30 pounds. For additional information check NP Box number 8.

Welded Mobile Projector Stand Announced by Coffey Company

☆ An all-welded assembled mobile projector stand that eliminates the need for stands of various heights, has been announced by Jack C. Coffey Co., North Chicago, Ill.

This new Luxor No. 55 stand can be adjusted to any height between 26½" and 42" and is practical for most types of a-v projector equipment. The stand has three shelves, the middle one being adjustable.

Shelf sizes are 1½ ft. x 2 ft. The top is covered with a sound-absorbing, non-slip mat, and the corners are rounded. For additional information Check NP Box =10 in space below.

RCA Engineers Reduce Tape Speed on Videotape Recorders

☆ A new engineering advance that enables television tape recorders to operate at half the conventional speed, thereby doubling the amount of information that can be recorded on a given length of magnetic tape, was announced by the Radio Corporation of America.

The lower tape speed of 7 1/2 inches per second will reduce tape usage and cost by 50 per cent and should bring video recording within the economic means of a wider group of users, according to C. H. Colledge, division vice president and general manager.

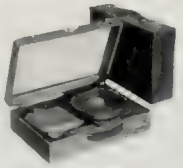
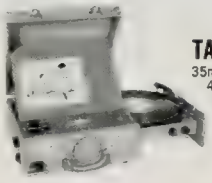
THESE SALES-MEN FOR "HIRE"



Any one of these "sales makers" will be valuable additions to your sales staff. Take a look at their qualifications:

1) After initial investment, they require no salaries, expense accounts, sick leaves or vacations.



2) They make every sales point you want made . . . the way you want it made (every time, too!).

3) They never tire . . . as persuasive on last call of day as first in A.M.

No, we haven't found a sales robot to replace the salesman. But, we have designed a line of sales "assistants" that will help your present sales force put their sales curve into orbit. Why not look into these Viewlex "sales makers" for your staff now. Contact your local Viewlex franchised A-V dealer or use coupon

SALESTALK
Slide and filmstrip projector, 4 speed record player, 9" x 12" screen . . . all in a smart attache case.

PETER RIGG'S COMMENTARY:

(CONTINUED FROM THE PRECEDING PAGE 14)

Colour Film Services, Britain's largest 16mm color film laboratory.

Through a network of reception stations throughout Europe, his company can handle work for film units wherever they are this side of the ocean.

Quick to take advantage of Colour Film Services facilities are two N.B.C. camera teams in London who are daily turning in 2000 feet of 16mm color a day for overnight "rushes."

"Scott's Last Journey" Named "Best of National Entries" at the Venice Festival

☆ British films gained the award for the best national entry at the Venice International Festival for Documentary Films this year. The Grand Prix for Teledocumentaries was awarded to the B.B.C. film *Scott's Last Journey* and first prizes were gained by *London for a Day* (British Transport Greenpark Productions), *Nuclear Power Reactors* (U. K. Atomic Energy Authority Basic Films), *Mr. Marsh Comes to School* (Ministry of Education), *The Ever-Changing Motor Car* (Ford Motor Company - TV Cartoons) and *Usutu* (Courtaulds Film Centre).

* * *

Swiss Federation of Industries Keeps Well-Informed on Latest Business Films

☆ Film production in Switzerland is highly concentrated in that small, busy country. Dr. R. W. Meyer of the Swiss Federation of Industries tells me that because of the small number produced each year, his office is kept well informed of every film released.

Switzerland is entering 4 films for Berlin: *Ingenieure* and *Allstromzug* produced by Condor-Film of Zurich; *Der Buhrle-Konzern*, the story of the Oerlikon machine tool factory, and *Images Vivantes*, sponsored by the Paillard company which maufactures the Paillard-Bolex movie cameras.

This is the largest number of entries yet submitted by Switzerland and it reflects the growing interest in the Festival throughout Europe.

* * *

Industry, Producers, Select Italy's Best as 100 Gather at Festival in Florence

☆ In Italy the national entry was selected at the Industrial Film Festival held in Florence this May where over 100 representatives of industry, film production companies, technicians and specialists viewed a total of 44 films from which the 15 were chosen.

The major Italian sponsors are all included in the selection — Fiat, Montecatini, Edisonvolta, Olivetti, Innocenti, but there are some newcomers this year — the Milk and Milk Products Marketing Board with *The Cheese of Italy* — the Venetian Glassmakers whose *Island of Glass* should bring back memories of European travel.

Other aspects of Italian industry on display through films will be hydroelectric schemes, constructions plants, bridgebuilding — all indicative of the enormous growth of Italian productivity since the Common Market came into being.

A Land of Vigorous Industrial Growth — the Netherlands Looks to Business Screen

☆ Traditionally, Holland is the land of windmills, dykes and good, solid folk dressed in picturesque "Sunday" clothes. Today, the Netherlands is the center of many vast industrial operations, is the site of Royal Dutch Shell's international Technical headquarters, of Unilever, the international Lever organization (Unilever) and the headquarters of Philips' Gloeilampenfabrieken, ranked as the sixth largest world industrial enterprise. Philips' lamps and other electrical equipment, with sales of nearly a billion and a half dollars, finds its way into almost every corner of the globe.

The Dutch are *very* familiar with the business industrial film medium and are responsible for one of the best of them all—Bert Haanstra's *Glass.*, created five years ago for the Dutch Glass Manufacturers' Association.

These are the Netherland's six "best" entries for Berlin in mid-September:

ENTRIES OF THE NETHERLANDS

Candid Europe. Sponsor: KLM Royal Dutch Airlines. Producer: Carillon Films.

Dredging by Dial. Sponsor: IHC Holland. Producer: Studio Bob Kommer.

For Better or for Worse. Sponsor: Philips Gloeilampenfabrieken (of Eindhoven). Producer: Halas & Batchelor, London.

Hold Back the Sea. Sponsor: Shell, Netherlands. Producer: George Sluizer.

Food from Earth — Food for Earth. Sponsor: Mekog-Albatros. Producer: Multifilm.

Destination Future. Sponsor: Federatie Nederlandse Electrotechnische Industrie. Producer: Jan Schefer.

* * *

Federation of British Industries' Panel Selects 15 Entries for Berlin Festival

☆ Back in Britain, a total of 96 films were submitted to a selection panel appointed by the Federation of British Industries from representatives of industry, government agencies, film production and the professional associations.

It is interesting to note that of the 96 films entered, 71 were produced in 35mm and 25 in 16mm. 27 of these 96 entries were made by in-plant film units. If anyone is surprised at the high proportion of 35mm films, they explain that the largest in-plant units in Britain — Shell, Imperial Chemical Industries, National Coal Board, British Transport, Esso, Associated Electrical Industries, all shoot in 35mm. In-plant units which submitted films made in 16 mm are: Baker Perkins, Unilever Duckham, Rentokill and J. Lyons & Company.

Among the films selected are *Time* sponsored and made by British Transport, being distributed in U.S.A. by Sterling Movies U.S.A. Inc. of New York and *The Coke Oven Workers* (reported in our Issue 4, 1962) Britain Petroleum's latest public relations film.

Associated Electrical Industries are giving to the Indian Government on part of its co

PETER RIGG'S COMMENTARY:

(CONTINUED FROM THE PRECEDING PAGES)

try's industrialization program. Their film, *The Peaceful Revolution*, is a sensitive depth study of the social and economic changes in India since her independence. The film is competing in Category A on behalf of Britain.

* * *

Films of Top-Quality, Wide Interest in List of West German Festival Entries

☆ A committee set up by the German Federation of Industries made these selections for the International Exhibition:

BEST FROM GERMAN INDUSTRY

Adhesion (color, 35 min.). Sponsor: Farbwerke Hoechst. Producer: Gesellschaft fur bildende Filme. The principles of 'fast' dyes.

Alvorada (color, 80 min.). Sponsor/Producer: Mannesmann. Shows the people and land of Brazil; how they are affected by an industrial economy.

Antonio (color, 10 min.). Sponsor: Krupp. Producer: Porta-Film. Life of a worker in the new Krupp plant in Brazil.

Campo Limpo (color, 17 min.). Sponsor: Krupp. Producer: Porta-Film. Building of the Camp Limpo plant in Brazil (see above).

Ein Neues Werkseug (color, 11 min.). Sponsor: IBM. Producer: Unda Film. Shows improved efficiency attained with computers and Hollerith machines.

Es Liegt in Unserer Hand (color, 27 min.). Sponsor: Volkswagenwerke. Producer: Marathon International, U. S. Theme: people travel well today, whatever their jobs.

Entspanntes Wasser (color, 12 min.). Sponsor: Henkel. Producer: Roto Film. Deals with removal of impurities from water.

Grossrohre vom Mannesmann-Hoesch. (color, 10 min.). Producer/Sponsor: Mannesmann. Pictures production of a steel casting.

Kahl (color, 13 min.). Sponsor: AEG. Producer: Dido Films. Building of the First West German atomic power station.

Kommunikation (color, 12 min.). Sponsor: Deutsche Bundespost. Producer: Bavaria Film. The postal services are always at the public's service as a link in communications.

Moltopren (color, 18 min.). Sponsor/Producer: Bayer. Shows the development and testing of a new fabric.

Partnerschaft (color, 28 min.). Sponsor/Producer: Siemens. Industry in partnership with a developing country.

Phantasie und Gestaltung (color, 27 min.). Sponsor: National Employment Office. Producer: Deutsche Condor Film. Theme: Fair dealings for pieceworkers.

Spiel in Farben (color, 30 min.). Sponsor: B. A. S. F. Producer: Gesellschaft fur bildende Filme. The feeling of people for color.

Stahlerzeugung nach dem Kaldo-Verfahren (color, 11 min.). Sponsor: Demag. Producer: HGP Films. New techniques in vehicle manufacture are depicted.

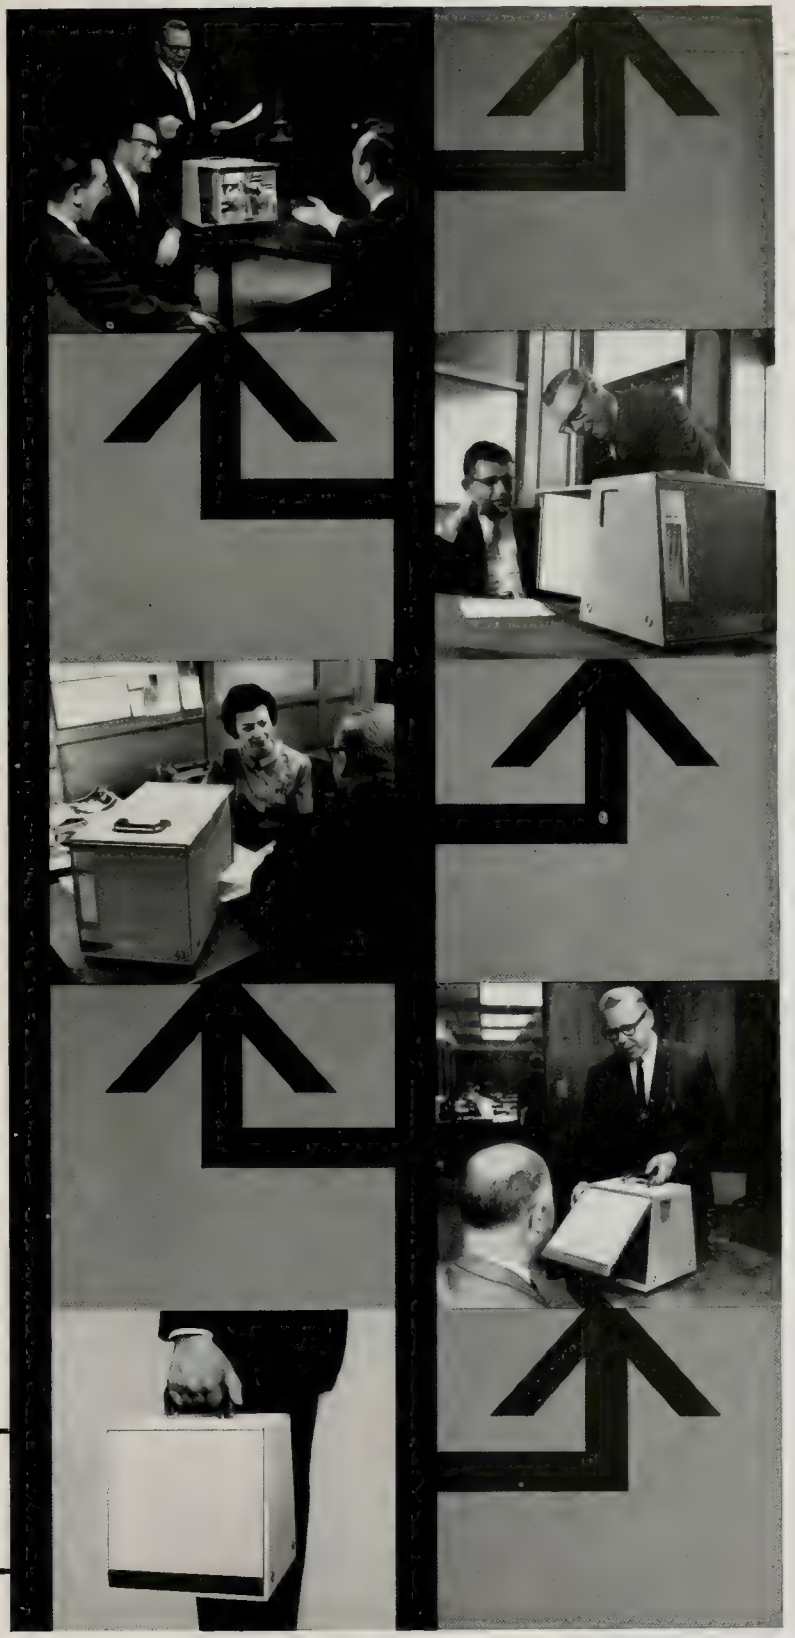
Whether you sell in a show room or board room, you'll find the Cinephonic Repeating Sound Movie Projector to be the best sales assistant your men ever had.

□

The Cinephonic can show and tell your story at a moment's notice . . . at any point of sale. It weighs just 15 pounds, probably less than your briefcase. You simply pick it up and go . . . to the right prospects in the right place. Show your story to one viewer, a dozen or a hundred at a time.

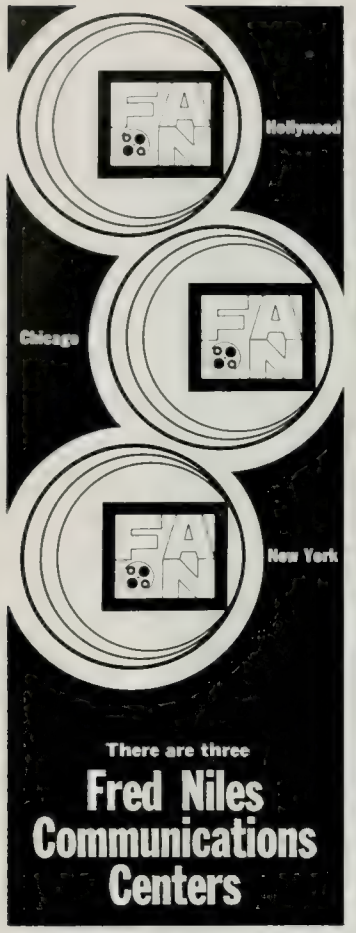
□



Cinephonic is complete in its own case, even to its screen. It works at the turn of a knob, shows brilliant movies; plays crisp, vibrant voice and music. Your film, in an automatic cartridge replays thousands of times. You can count your cost in pennies per showing.

□

Are you preparing a new film, or do you already have a winner? In either case — see and hear the Cinephonic now. See how your story can reach more of the right people in the right place. It can help you to sell more of what you're selling.



□

The Wide World of Sponsored Pictures

Honor Year's Best Safety Pictures at National Congress

TOP AWARD WINNERS in the 1962 safety film contest, conducted by the National Committee on Films for Safety, were honored in Chicago during the recent National Safety Congress.

Plaque awards for the year's best safety education films were presented by the Committee's chairman, Henry G. Lamb, Technical Director of the American Standards Association, at well-attended ceremonies held in the Grand Ballroom of the Conrad Hilton Hotel on Tuesday evening, October 30th.

Sharing these high honors in a vitally important field of education were: Audio Productions, Inc., for the film, *See a Pin*, produced for the National Board of Fire Underwriters; Bay State Film Productions, Inc., for *Just Plug It In*, sponsored by New England electric utility companies; and Parthenon Pictures, for *Locked On*, sponsored by General Dynamics/Astronautics.

The hard-hitting traffic safety picture, *Anatomy of an Accident*, produced for the Bell System by Jerry Fairbanks Productions, Inc.; *None for the Road*, produced by Charles Cahill and Associates; *The Key Man (a series)*, produced for the National Safety Council by Gil Altschul Productions shared plaque honors at the ceremonies.

The American Petroleum Institute's *Farm Tractor Safety*, produced by John Colburn Associates; *Ten Long Minutes*, produced for the Safety Council by Pilot Productions, Inc.; *Water Rescue*, produced by American Film Producers; *The Bottle and the Throttle*, a Sid Davis Production; and *Fire fighting Aboard Tankers*, a U.S. Coast Guard flim, were the other plaque winners.

Hollywood Ad Club Announces Third International Awards

☆ The Third Annual International Broadcasting Awards, honoring the world's best television and radio advertising of 1962, will be presented on Tuesday, February 26, 1963 at the Hollywood Palladium in that West Coast center of film production.

The awards, which carry an entry deadline of December 1 and include television commercials as well as public service films, are sponsored by the Hollywood Advertising Club each year.

* * *

Parthenon Open House Aims at Better Understanding of Film

☆ In the first of a planned series of open house events designed to broaden understanding of the film medium, Parthenon Pictures, Hollywood, recently had a "four-a-day" screening of *The File of Henry Royall*, demonstrating the studio's Tria/Scope technique. *Weston Hydraulics*, described as a "brochure in motion"; and *The Vicious Circle*. A good idea which other producers might well emulate in their areas!

Air Transport Assn. Updates "Mr. Withers" After Long Run

☆ When most companies sponsor a public relations film they can show successfully for five years they usually concede they've had their money's worth. But not so with Air Transport Association's 27-minute color film, *Mr. Withers Stops the Clock*. Industry officials say the picture's message is just as timely and necessary today as

Now you can double the value of your business films.

Double the *use* of your business films and you double their *value*. Simple? It's even simpler to use the Videotronic 8, MPO's new, automatic 8mm sound projector. You and your staff will really use *this* motion picture projector — and your films! You'll find it easy-to-operate, easy-to-carry, easy-to-watch, easy-to-maintain, easy-to-own. It's the lowest priced repeater on the market. Or, if you wish, lease-use available on low-budget monthly rentals. (As low as $1.00 a day!) And rentals may be applied against purchase price.

MPO will also convert your 16mm or 35mm films to 8mm. The nation's largest producer of TV commercials and sponsored films for industry, MPO can produce effective low-cost films for your Videotronic 8. For further details, just drop a note to Judd Pollock, MPO, 15 East 53rd Street, New York 22, N.Y. Or call TR 3-7000 in New York. There's no obligation, of course.

TRIA/SCOPE for TRAINING EMPLOYEES who deal with other people; Salesmen, Sales People, Tellers, Comm'l Reps, Foremen

An utterly new combination of movie and persuasion techniques which totals up into . . .

TRIA/SCOPE For Training

HIGHLY "STYLED"—visually sharp and fresh—a really 'new look'.
UNCLUTTERED . . . spotlights the essentials
FLUID SETTINGS . . . 50 sets for cost of 5
TRAINEE PARTICIPATION . . . role playing and problem solving that identify.
GREAT DIRECTNESS . . . no wheel-spinning or fluff . . . covers more ground faster, yet with clarity . . . moves smoothly from high point to high point without labored transitions.
And a TAKE-HOME REFRESHER they'll use.
QUICKLY PRODUCED . . . A great technique for the man who needs his picture yesterday.
NEWLY LOW IN COST . . . Movies' advantages can now compete with good sound slidefilms and printed programs (yet looks expensive) . . . your investment comes back fast.
TRIA/SCOPE is as yet restricted to: (1) companies who can think about a multi-picture program, and (2) companies headquartered reasonably near New York, Chicago, Detroit, San Francisco or Los Angeles.

PARTHENON PICTURES
Cap Palmer, Exec. Producer

Hollywood 26, Cal.

(CONT'D FROM PRECEDING PAGE)

was when the film was produced in 1956.

At that time, the only passenger-carrying jet transport in the air was Boeing's prototype of the 707, now widely used, and it wasn't available for pictures. So "Mr. Withers" had to tell his story against a background of now outmoded aircraft.

To up-date the film to include the tremendous influence of the jets, Tom McGarry, ATA's Public Relations Director, and Chapin Leinbach called in Paul Alley, who wrote and produced the original film. With the deletion of some scenes and replacement with footage showing the modern jet transports, fifteen new scenes will enable "Mr. Withers" to still tell the story of the importance of airports to the communities they serve.

The revised version of the 1956 film is now being distributed by Association Films to clubs and civic groups, and ATA confidently expects "Mr. Withers" to work for the air transport industry for another five years.

Maine's Agricultural Films Widely Shown on Television

☆ During the past fiscal year, a record audience of 42 million viewed the Maine Department of Agriculture's current motion pictures on farm subjects.

According to H. G. Hawes of Hallowell, the Department's film producer, television stations in the eastern United States and Puerto Rico provided 826 showings in the 1960-61 year — and with an estimated audience of over 41 million. Over 3,000 theatrical showings and 500 school and organization bookings were also secured by the Agriculture Department's Augusta office.

Maine's most popular film last year was *Adventures in Eating*, released in June, 1961. It contrasts the annual public chicken barbecue at Belfast with a clambake on a Maine coastal island. Other widely requested films during the past year include *Blueberryland*, *Part-Time Farmer*, *Maine Barbecue*, *Potatoeland*, and *Market Man*.

Hawes notes that the most popular film, through the years, has been *Climate and the Apple*, produced in 1954, which received over 400 television showings to an audience of about 21 million.

During the past eight years, all Department films, including some 20 titles, have had almost 4,000 television showings.

A Word of Tribute to a Friend and Leader

Wilding's C. H. Bradfield, Jr., Succumbs to Long Illness

VISITS WITH "BRAD" at his home on the lake, along Chicago's North Shore and at the studios of Wilding, Inc., where C. H. Bradfield, Jr., served as chief executive for over two decades, were a constant source of inspiration to the editor and publisher of BUSINESS SCREEN. The man who shared our enthusiasm for the future of a-v communication had nothing but

The late C. H. Bradfield

praise for his competitors, an unswerving determination to make *his* company one of the best in its business.

"Brad's" own career in audio-visuals began in 1929 when he joined Electrical Research Products, Inc., in New York, after studies at Baltimore Polytechnic Institute. This Western Electric subsidiary, in which other leading companies within our industry also originated, gave him the groundwork for a move into film production. In 1933, he joined Audio Productions, Inc., becoming a vice-president in two years.

Managed Studios in England

A brief sojourn abroad followed when he became a director of Sound Services, Ltd., Publicity Films, Ltd., and then managing director of Merton Park Studios in London. He returned to the U.S. to join the late Norman Wilding in 1939, becoming treasurer of Wilding Picture Productions, Inc., at the company's former Detroit headquarters.

"Brad" was elected president and general manager of Wilding on the death of its founder in 1947. The firm had moved to its present Chicago location in the interim. In 1959, with the election of H. Williams Hanmer as president, Mr. Bradfield assumed the newly-created post of Chairman of the Board.

Capitalizing on the recognition attained by Wilding during World War II when the company became one of the largest suppliers of motion pictures and other visual aids to the Armed Services, "Brad" lead his company into a program of expansion and diversification. Sales management consultation, manpower development, marketing and merchandising services were broadly developed; new divisions were formed for business theatre and television commercials. In these post-war years, Wilding, Inc. moved nationwide with studios and sales offices in metropolitan areas coast-to-coast.

The Industry Loses a Leader

C. H. Bradfield, Jr., Chairman of the Board of Wilding, Inc., leader in this chosen field of life work, died on September 12 at his home in Glencoe, Illinois. He is survived by his widow, Carolyn, his two daughters, Mrs. Marshall (Jean) Boudreaux and Mrs. Roland (Linda) Zahn and three grandsons.

A living memorial to his vision is the strong, vigorous company he leaves to his able successors and the warm regard we carry with us forever of a friend whose counsel and kindness was so generously given during our own "growing years."

A Sponsored Film Project of Association Films

"FILMS FOR FREEDOM" is a sponsored film project developed by Association Films to help Americans better understand our precious heritage of freedom, justice and individual initiative. How superbly sponsored motion pictures do this job!

Millions of Americans will watch these films and learn something of the ideas and ideals of freedom — that freedom can be a President pleading for a league of free peoples and nations, an astronaut alone in a spacecraft called Freedom 7 . . . a suffragettes' parade . . . a youngster's first business experience, an architect changing the horizon of a city . . . freedom is names like Roosevelt, Edison, Churchill, Gandhi . . . it's an American doctor in Burma, a place called Boys Town, an African nation emerged. These are some of the things audiences will find in the more than 75 films that comprise "FILMS FOR FREEDOM."

Many of America's most prominent sponsors are represented, including the Metropolitan Life Insurance Company, the Edison Foundation, United Fruit Company, Corning Glass Works, Prudential Insurance Company of America, Gulf Oil Corporation, Firestone Tire and Rubber Company, American Airlines, and the National Aeronautics and Space Administration. Perhaps YOUR film belongs. For full information write us today.

ASSOCIATION FILMS, Inc.

347 Madison Avenue, New York 17, N. Y.

America's most creative distributor of sponsored motion pictures

AF 50

SPECIAL FEATURES of this largest of all fall issues of BUSINESS SCREEN include the "Special Report" on the recent Third Annual International Industrial Film Festival at West Berlin (beginning on page 47); the several case histories of important new sponsored pictures (see pages 54, 55 and 56); and the many pages devoted to our thoroughly-researched Annual Buyer's Guide to Film Production Services, which begins on page 61. This feature resumes a pioneer effort we originated in these pages in 1955.

The Festival in West Berlin is noteworthy as an example of what must happen, someday soon, in these United States. The industrial audio-visual men who gathered in that beleaguered city represented the "cream" of Europe's business film sponsors. They were there to see, discuss and judge a specific kind of product, with effectiveness as the primary factor. The affair was well-organized, the screenings held under excellent conditions in the impressive Congress Hall auditorium.

The most important fact of all, however, is that this event is *sponsored* and *conducted* by European federations of industry, on a top-level and recognized by principal executives in each country. *The awareness of the medium* is on a high plane; *the obvious quality* of most entries should be an object lesson to U.S. industrial leaders. The aggressive trade efforts of Britain, Italy, Germany and other nations was reflected in the pictures they exhibited at West Berlin. *Take another hint, America,* of the competition you face in overseas trade!

* * *

Goods Exported by the U.S. Mean Jobs for Our Workers But We Must Also Buy Abroad

☆ Speaking of foreign trade, John S. Stillman, deputy to the under-secretary of commerce, U.S. Department of Commerce, said it plainly the other day. Speaking to industrialists in Hartford, Conn. he declared:

"Exporting has become the patriotic thing to do these days. By developing the new potentials for export expansion with old-time Yankee-trader vigor, business men can substantially accelerate the economic progress the early traders started."

A commerce department export study reveals that every $1,000,000 of goods exported by the United States means 150,000 jobs for Americans. Moreover, export industries generally have the highest wage scales. 3,100,000 workers or 5.8 per cent of all jobs in the private economy, were required to produce, transport and market the $20,700,000,000 of merchandise exported from the United States in 1960.

There's an appropriate article on overseas film translation on page 46. But remember that this is a two-way street. America must also *buy from our friends abroad* in order to *sell* to them in the years ahead.

* * *

Manpower Development and Training Act Is Challenge to Wider Use of Film Medium

☆ And there's another vital mission awaiting films in the new Manpower Development and Training Act (Public Law 87-415) recently enacted by the Congress. This bill provides

Camera Eye

THE EDITORIAL VIEWPOINT

Federal funds for the retraining of workers displaced by economic changes, automation, etc. Training programs in both public and private technical schools should be implemented by the best in available training films.

It's a *state* decision, with Federal funds provided to the schools to acquire these training aids. Let the State Directors of Vocational Education know about the a-v resources already available; let industry *create and share* its finest films to aid this vital program.

* * *

Agriculture's Centennial Film Festival; CINE Screening High on November Calendar

☆ Washington will be the scene of two important November film events. On November 7, 8 and 9th, the U. S. Department of Agriculture holds its well-heralded Centennial Film Festival and Visuals Workshop. On November 13th, the Committee on International Non-Theatrical Events (CINE) will hold an evening Exhibition of Films of Merit and present the awards to Cine entries from the United States, received at such festivals as Edinburgh, Venice, etc. The showing will be held in the Crabtree Auditorium of the National Education Association at 7:30 p.m., November 13th.

* * *

Soviet Union Tightens Reins on Film Makers; Must Return to Communist Propaganda Line

☆ During the Cuban crisis, we took note that the Soviet Communist Party has begun demanding more party propaganda in Russian films. The decision was made by the party's central committee and ends a brief period of indulgence among film makers.

"Soviet cinema art does not, as yet, play its full role in the Communist upbringing of the people," declared the committee statement published in KOMMUNIST, complaining about the "great number of ideologically deficient films" produced in recent years.

The Soviet Union's recent acquisition of international film awards will drop, we predict, when Culture Minister Ektarina Furtseva tightens the reins. And tighten she will, because the Soviet film industry is *a government monopoly.*

The USSR also trains hundreds of film workers for service in other lands, especially among the new African nations and in Asia, where emerging factual film units provide documentaries for public showings. The influence of these Communist-oriented and trained film workers cannot be under-estimated.

We have faith in the quiet opposition of really dedicated film workers behind the Iron Curtain and in the uncommitted nations. The medium is too great to be prostituted for ideological aims; sooner or later the truth will have its day. No self-respecting worker in these films would want it any other way!

* * *

4th International Labor Film Festival to be Held in Tel Aviv, Israel in May, 1963

☆ Other show dates ahead include the 4th International Labor Film Festival to be held next year in Tel Aviv, Israel from May 5 to 10th, 1963. Previous Labor Film events were held in Hamburg, Vienna and Stockholm.

Sponsor of the event is the International Labor Film Institute in Brussels, Belgium. The object of this special event is to compare "works of cinematographic art produced by and in the free labor world and to show films of social and human interest useful to labor organizations."

Israel's dynamic economy, which has made remarkable progress in a single decade, offers an inspiring background to attending delegates.

Note Four Decades of Visual Education as SVE Discovers Projector Made in 1920

☆ Lest we forget that the art and science of visual education as we know it today has more than a half-century of useful experience behind it, take note of the recent discovery in a Chicago camera store of an early model Acme-SVE 35mm combination motion picture and slide projector, dating back to 1920-21.

Jack Kennan, president of the Society for Visual Education, Inc., a Chicago-based subsidiary of Graflex, Inc., unearthed the 1,000 watt 35mm silent motion picture projector (which also presents 3¼" x 4" slides) and

European Community Information Service Presents a Basic Film on the Common Market

Europa is a new animated cartoon designed to tell American audiences about the close relationships of the peoples of Europe in the modern European Community. It avoids the complexities of abstract economics, and is planned to act as a basic primer of today's Common Market members, although the phrase "Common Market" is never mentioned.

The sponsor of *Europa* is the European Community Information Service, representing Euratom, the Common Market and the European Coal and Steel Community. The producer is Pelican Films, Inc., New York. The purpose of the picture is to show that the new Europe is not a cartel dreamed up in a board room, but the long un-fulfilled dream of Europeans since the dawn of history to pool their resources and share their skills and wealth amongst each other.

Opens on Significant Legend of Europa

Europa's plot tells of the legend of the princess Europa, carried away by the great God Zeus to the Island of Crete. Thence for 2500 years her sons — all brothers — have

French citizens learn about a new economic plan in this scene from the cartoon "Europa."

done little but battle one another from century to century. Charlemagne, the Vikings, the Holy Roman Empire all tried to unite the brothers but nothing succeeded.

Yet Europeans who colonized North America and set up new boundaries found them dissolved by common interests.

The wars of the European brothers became so severe that they almost destroyed themselves. America sent goods to help Europe help herself. The Marshall Plan had no boundaries. Finally in 1950, France and Germany took the first step by surrendering sovereignty over their coal and steel resources. And six nations picked up the challenge and took the first step toward a united Europe.

The European union, *Europa* says, will seek to provide evergrowing commerce among the markets of the world. It will form an Atlantic partnership with North America to supply the needs of the developing nations of our shrinking world.

Complexities of Europe in Capsule Form

Europa's amusing European cartoon brothers are pictured against backgrounds of old prints showing European industry in times past. It reduces the complexities of the Europe of history into a capsule form that is thoroughly recognizable. It makes the squabbling brothers seem finally reconciled, and it provides a firm basis for our understanding and friendship.

Europa was directed by Pelican's Ted Lowry. Distribution of the film will be through the facilities of Association Films, Inc.

VIEWPOINT

A Spokesman for the Screen Directors International Guild Replies to Our Editorial With Background on the Aims, Ideals of His Group

To the Editor:

THE FILM COMMUNITY considers BUSINESS SCREEN an important, influential publication, above the use of its columns for strictly partisan purposes. And the fact that you have opened the columns of your publication to this letter's publication is evidence that you embrace the American notion that a press is truly "free" only when it is fair.

It is, then, in the interests of fairness that we make the following observations about an editorial which appeared in a recent issue under the title "Midwest Studio Managements Can Uphold Standards and Status of Screen Directors." In this editorial you asked a number of questions which in a subsequent editorial you boiled down into one two-part question: *"How will present contractual moves of the Midwest Branch of the Screen Directors International Guild help its fully-qualified director-members, and how will they advance the production of better films?"*

Our first reaction to this question is a feeling that somewhere along the line we have fallen down in a part of our public relations job — that we have failed to keep you properly informed about the aims and work of the Guild. Our second reaction is that we are being asked to define progress and to show where it is desirable.

Actually, the same answer applies to both parts of the question, for the things that are good for the director are good for the industry, and vice-versa. Let it be pointed out at once that SDIG is striving for the same goals as the film companies, the sponsors and all others interested in the welfare and the progress of the motion picture: better films, more widespread use of films, harmony among film-makers and a proper reward, both aesthetic and monetary, for everyone involved.

Now, since your original questions seem to have been asked from the producer's viewpoint, we will try to keep that viewpoint in mind as we answer. It may come as a surprise to some to learn that the original Screen Directors Guild came into existence in New York to fill the producer's needs as well as the director's. Many of SDG's early members were producers, just as many of SDIG's members are today.

To understand the implications of this it is first necessary to understand the nature of the film business and the unique problems faced by the personnel of this business on both creative, management levels.

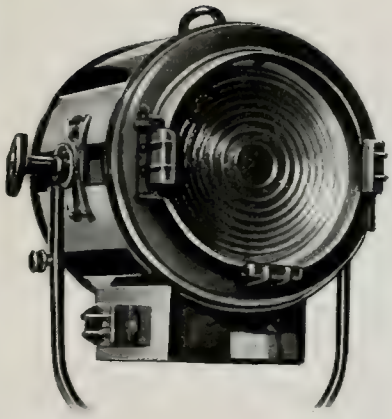
Let us simplify the discussion by putting aside any consideration of the theatrical or television entertainment features and documentaries directed by members of SDIG and concentrate only on the business film, a term which for purposes of convenience we use to embrace industry films, public relations films, films for education, medical films, religious films, training films, TV spots, etc.

The work of the Guild is premised on the central concept that the director is the key figure in the ultimate success of any motion picture. There are a good many film men in the East and the Midwest who have dedicated years of effort to keeping genuine talent in the highly creative post of the director. And the rise in the quality and importance of the business film parallels the rise in the prestige and recognized importance of the director.

Many business film producers have long understood the vital role the director plays in the success of his productions, and herein lies the reason for the above statement that the directors guild was originally organized to fill producer as well as director needs.

What was the situation the established producer and the established director faced in the East some 20 years back when the directors first turned their attention to organizing a guild?

Outstanding business films — except for the product of a few long-established film companies — were scarce. The adequately-paid director was a rarity. Result? Bad films — bad films made by whomever the producer chose to call "director." The bright future of the business film was beginning to show, and so there had come running to the scene many who became "producers" overnight. And their understanding of the importance of the director was nil.



These newcomers realized, of course, that they had to have technicians — cameramen who could get a proper picture on the screen, engineers who knew the mysteries of sound, and other skilled workers. They knew when a picture was out of focus, and some could actually tell when a scene was badly lit — these were measurable results. But the director? How could the new producer measure the job of directing? There was no focusing, no lighting, no sound in his province.

The director, a "producer" often concluded, was, if not unnecessary, then certainly not very important.

Screen Directors' Reply:

His pay check reflected this attitude. So, all too often, did his work. Poor pictures resulted and the value of business films was damaged. Many sponsors refused to back a second film. The whole industry was the victim. The novice producer was committing mayhem upon the goose that was trying to lay a golden egg.

But he wasn't the only man abroad with an axe and the goose had to keep hiding its nest or risk extinction. Even the ablest of producers were faced with a problem that was doubtless to be expected: the sponsor paid for the picture; therefore, if the sponsor chose to become a "film expert" overnight and tell the producer and the director how to make the picture, "the better part of valor had to be the order of the day."

Indeed, to this day, many producers and directors spend sleepless nights trying to figure out how to save certain enthusiastic sponsors from their "expertness." But today most directors are better qualified for this job, as are most producers, and the sponsor is likely to accept the advice of men who are obviously qualified to give it.

The business film today involves far too great an expenditure of money to brook amateurism in any quarter. It is "growing up" and is being placed more and more in the hands of professionals. And this is where the Guild comes in.

A prime function of the Guild is to set standards and by so doing to help stabilize a mercurial and often chaotic industry. The Guild can only set the standards and, by securing contracts with the producers, strive to maintain them. It is up to the producers to help in this maintenance, because involved is their own welfare as well as that of the directors and, of course, that of the industry as a whole. And how do they help in the maintenance of these standards?

The answer will become clear as we examine the following question BUSINESS SCREEN asked in its editorial about the Guild:

"Has the Guild ambitions toward a kind of 'mass union' with equal status for all of its skilled and less-skilled members? If not, then let it define the qualifications of a screen director and drop the unqualified from its rolls!"

Our immediate answer is that if there are any "unqualified" directors in the Guild then the producers put them there. For it is the producer, not the Guild, who hires the director. If he chooses to hire an inexperienced person to direct a certain film, the Guild is obliged by law to accept this person as a member.

He first becomes an "Associate Member" but if he is hired repeatedly until he has accumulated credits for 120 minutes of production for actual screen or television showing, then he becomes a full-fledged member.

There are those who hear the expression "120 minutes of film" with raised eyebrows. As a qualification for membership in the Guild it sounds small to them. They fail to realize that "120 minutes of film" can mean any of the following things:

A two-hour feature film (the average is 80 minutes) representing five million dollars and up in production costs;

12 one-reel shorts which could cost anywhere from a couple of hundred thousand to a million or more dollars, depending on the subjects;

Six two-reelers of similar cost, or four three-reelers (half-hour shows) costing the same.

For producers, sponsors and others connected with TV spot commercials, the breakdown becomes even more graphic: 120 minutes of film can represent 720 10-second spots; 360 20-second spots or 120 one-minute spots.

Depending on subjects and sponsor, any of these categories could represent anywhere from $600,000 to a couple of million dollars in costs. Long before an unqualified director could spend such sums of money on 120 minutes of film his lack of qualifications would be discovered and he would be relieved of his chores.

Such are the qualifications set up by the Guild for its members. These members are listed, with their directorial credits in the Guild's Directory of Directors, published each summer by SDIG and distributed gratis to producers, advertising agencies, sponsors, the press and other interested parties.

By establishing wage scales and working conditions commensurate to the valuable contributions the director makes to a film, the Guild is in effect saying to the producer: "your director is worth this much, and in order to do his best work he should function under such-and-such conditions, so, in employing your director, why not hire a man or woman of proved merit — or at least one who you have reason to believe has genuine talent?"

It is obvious that without standards there would be no end to undercutting and slippery adventuring at the expense of creative talent, at the expense of producers trying to do quality work and, finally, at the expense of the industry as a whole.

The concept of the Guild goes far beyond the establishment of wage levels and working conditions. It embraces the whole notion of improving the art and craft of directing motion pictures, and it strives to aid its members in the growth of their creative skills.

Private forums are held at which members see and discuss each others' work as well as the latest productions and developments in the whole field of cinematic art. At technical sessions, they keep abreast of the latest methods and equipment in motion picture and TV production. In addition to the publication of the annual Directory, the Guild strives in other ways to be of service to producer, sponsor and advertising agency.

For example, public film forums and technical forums bring all interested parties together for the screening and discussion of the latest productions and developments in motion pictures and television; and a new periodical on filmmaking from the director's viewpoint will soon make its appearance under the Guild's masthead.

The Guild represents 523 directors in the United States and other countries. It has signed contracts with 126 producers in the New York area alone, and your correspondent, who, like quite a few Guild members, is a producer as well as a director has talked to many of them on the subject of the Guild. They seem pretty well convinced that SDIG is a highly-stablizing factor in the industry hereabouts.

The 115 directors of the Midwest Branch, while operating under the aegis of SDIG, administer their own affairs and are negotiating their own contracts. SDIG is proud of their progress in attracting an overwhelming number of working directors in their area. Together with their strengthening of the professional and economic status of the Midwest director, they are doing a outstanding job of sharpening his creative faculties by holding screenings, forums and symposia at which the art of the film is discussed in relation to the director's contribution.

Perhaps it would not be unprofitable if our Midwest producer friends examined a bit more carefully the situation in the New York area as well as in their own neighborhood and disabused themselves of the notion that a director can afford to pursue interests contrary to the good of the industry in which after all, his own good is so intimately involved.

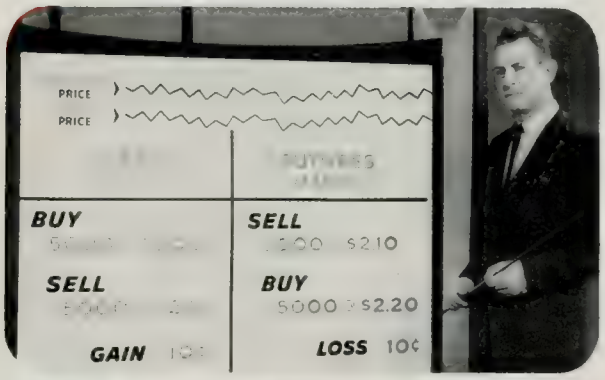
The Guild sends good wishes to you and to the whole film and television community in the Midwest. May we express a hope that, working together, we can achieve goals that would be impossible of attainment in a climate of disharmony and misunderstanding.

— *Jack Glenn, First Vice-President and Chairman of the Public Relations Committee, The Screen Directors International Guild*

ASSIGNMENT

Develop selected audiences for new Chicago Board of Trade public-service film

The Speculators



16mm, free-loan color and sound film, 28 mins.

Sponsored by: The Chicago Board of Trade

Produced by: Wilding, Inc.

Objective: Present, for laymen's understanding, the role of the "speculator" in the commodities market; describe the purposes and services of the Grain Exchanges. Illustrate the methods by which both reduce risks for the farmer, grain handler, manufacturer, consumer.

Selected Audiences: Civic, fraternal and community organizations; Business and Industry meetings and programs; Women's clubs and groups; Medical and other professional; Farm organizations; Colleges and universities.
Public service telecasts on television stations.

Audience Development and Distribution by STERLING MOVIES U.S.A. INC.

Executive Offices: 375 Park Avenue, New York 22, New York

NEW!

Executive Screening Room . . In New York City!
A national audience of business and professional leaders now available to screen your business film through closed-circuit telecasts to 40 New York hotels. Write Sterling Movies U.S.A. for further details.

"Film as Communication" Jury in Action at San Francisco

Factual motion pictures will compete for honors at the Sixth Annual San Francisco International Film Festival in the "Film as Communications" segment being held in that city from October 31 through November 13. This is the third year in which non-theatrical subjects are being judged.

Films will compete for awards in nine categories, including art and experimental films, Government information films, subjects made by community and non-profit organizations, industrial in-training and educational films at all levels. Entries will be judged on their artistic use of material, technical excellence and success in conveying their message, according to Festival authorities.

With approximately 250 entries already confirmed, approximately 20 pre-screening juries have been set up in the San Francisco-Sacramento area for first review. The membership of the Northern California Chapter of the Industry Film Producers Association was among the groups called upon to serve on both pre-screening juries and as members of the "Film as Communication" committee.

A film in each category will receive a Silver Award and special Golden Gate Awards will be presented to films of merit.

Port of New York to Feature Circular Theater at '64 Fair

The Port of New York Authority has voted to establish a "movie-in-the-round" in its building at the World's Fair 1964-65 at a cost of $299,400.

Plans call for a 13½-foot-high screen 195 feet in circumference, surrounding audiences of about 400. A movie about the port will last 15 minutes and will be shown continually.

Museum of Modern Art Will Show Best TV Commercials

Television's outstanding commercials from 1948 to 1961 will be included in *Television USA: Thirteen Seasons*, a special series of kinescopes and films produced for television to be shown at the Museum of Modern Art, beginning in January.

Abe Liss, President and Creative Director of Elektra Film Studios and a former instructor in film design at Columbia University, is organizing this part of the program which will include dramatic shows, comedy and music, and education in the arts as well as commercials.

More than 200 advertising agencies and production firms have already been contacted and asked to submit material for possible inclusion in the program. The aim is to make a comprehensive evaluation of the development of the commercial on television from its formative years up to 1961.

Television USA: Thirteen Seasons, is the first project of its kind in the history of the Museum which collects and exhibits photographs, films, design objects and advertising layouts as well as paintings, sculpture, drawings and prints. The television show is being aided by contributions from NBC, CBS and ABC.

The television films and kinescopes selected will be shown twice daily in the Museum Auditorium at varying program intervals.

Educational Film Librarians Elect F. A. White President

F. A. White, director of th Bureau of Visual Instruction the University of Wisconsin, is th new president of the Education Film Library Association, ser ing a one-year term.

Other new officers elected the September meeting of the A sociation's directors include vic president Sally Clark, film curat at the New Jersey State Museu in Trenton; and secretary Kathr L. Carlin, supervisor of Instru tional Materials in the Dade Cou ty (Fla.) Schools. Emily Jon continues as EFLA's fulltime a ministrative director.

Plans for the Association's 19 American Film Festival are so to be announced, according to I White. Program details for a sp cial Film Evaluation Workshop be held in December are also a ticipated.

KALART VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

The Dependable One

There's something very comforting about the way a Kalart/Victor projector runs. Whisper quiet. Almost without effort. And above all, dependably. It's *always* ready to put on your program.

One reason is the lubrication system designed exclusively for Kalart/Victor projectors. Oil is metered from a large reservoir on "demand feeding" by means of a wick. Parts are given only the amount of oil they actually require. There can be no leakage because the oil travels *upward* through the wick by capillary action. One filling of this oil reservoir keeps the projector running smoothly for some 1,200 hours, or a full year of heavy use. What efficiency!

Of course, there are a score of other features that contribute to Kalart/Victor's reputation as the *dependable* 16mm sound projector. Your authorized Victor Audio-Visual Dealer will be more than pleased to point them out to you.

Free —"How Industry Profits from Films." Booklet is packed with information on use of audio-visuals in every phase of business, from training to sales. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 1V.

KALART VICTOR

VICTOR ANIMATOGRAPH CORP., DIVISION OF KALART, PLAINVILLE, CONNECTICUT

THE NEWSREEL:

(CONT'D FROM PRECEDING PAGE)

of $.03 on each share of the company's Class A stock will be paid holders of record October 1st on October 15th.

Total sales of $3,740,429 were reported for the fiscal year ending May 31, 1962 by president Louis A. Peirez. Total reflects, in part, the company's recent acquisition of Sonic Recording Products, Inc. The newly-acquired company is a leading producer of high fidelity records for many of the nation's top labels.

In line with the Company's additional emphasis on new product development and expanding research and development, the Peirez family group (owners of over one-third of the outstanding Class A shares) has elected not to accept dividends on their stock in order to permit greater use of Company funds for these purposes.

Re-Elect Connelly as Head of Visual Presentation Assn.

☆ Newly-elected officers and governors of the National Visual Presentation Association were announced in New York last month. W. J. Connelly, Union Carbide Plastics Company, New York, has been re-elected president for the 1962-63 year.

Other officers are D. P. Smith, International Harvester Company, Chicago, vice president (user); B. A. Barnett, Manhattan Color Laboratories, New York, vice president (trade); H. Stolte, Chas. Pfizer & Company, New York, secretary; and C. Behymer, Pan-Media Company, New York, treasurer.

New members of the Board of Governors include W. B. Adams, McKinsey & Company, Chicago; R. Hall, Boy Scouts of America, New York; W. A. Klauber, Metropolitan Life Insurance Company, New York; L. Luxenberg, Columbia Broadcasting System, New York; J. C. McDonagh, Young & Rubicam, Chicago; W. W. Weltman, Marwel Advertising, New York; and Janet R. Wilkins, National Association of Manufacturers, New York.

A special advisory committee on public relations matters has been appointed by Mr. Connelly, consisting of Robert Seymour, BUSINESS SCREEN; L. Solomon, St. Regis Publications; and J. Wartell, PMI, all of New York City.

Top 3,400 TV Commercials Now Available in 16mm Films

☆ The American TV commercials Festival has taken a giant step to stimulate the highest standards of creativity in TV advertising.

Product category reels of 3,400 top TV commercials which were entered in the three annual TV commercial festivals to date are being made available for advertiser and agency study by the festival director, Wallace A. Ross.

The 40 product categories available in 16mm film have been organized on individual reels according to the year they were telecast. Either the 1960, 61, 62, or all three yearly product reels may be booked. Categories include a widespread range—apparel and appliances to travel and utilities—and include such heavy TV advertising areas as banks, cigarettes, retail stores.

In each instance, the reel is headed by the "Best" and "Runner-up" selections for the year, followed by finalists and then other entries. Film transfers of original video tapes have been included where available.

This new service complements the reel of 1962 award winners with its introductory *Heartbeats of '62* trend analysis short that is already on a tour of ad agencies, advertisers, and industry conventions. For further information, write to The American TV Commercials Festival, 40 E. 49th Street, New York 17, N.Y.

Glavin to Consolidate Labs

☆ John J. Glavin has joined the executive staff at Consolidated Film Industries, functioning in the sales field, according to Sidney P. Solow, vice-president and general manager of the Hollywood-based national film service organization.

KALART VICTOR

MOVIEMATIC AND DUOLITE MODELS

This Salesman Never Gets Tired

He also has a flawless delivery, a photographic memory for sales features, and a continually cheerful disposition.

In short, he's a 16mm sound film that goes anywhere to tell your story perfectly through the use of a Moviematic or Duolite projector.

Moviematic and Duolite models by Kalart/Victor are designed to show your films under the exact conditions you want. For example, the built-in screen permits the use of film in a person-to-person sales situation. And the repeater magazine—a Moviematic feature—eliminates rewinding and rethreading so your show can start at the flip of a switch.

Projectors are available on a purchase, lease, or lease-to-purchase basis. Almost any arrangement can be made whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 1T

Coca-Cola Sponsors World Series Films

Millions to See Thrilling Action of Giants-Yankees Games

By All Odds, the motion picture program of the major league baseball clubs in the United States is the biggest sports film venture of its kind. Annually, through the past 28 years, films of each World Series have mounted up into thousands of prints showing all over the country (and worldwide) during the long months between baseball's seasons. Instructional films on fine points of the game supplement the huge program which is directed by Lew Fonseca, head of the majors' Motion Picture Division and founder of the project.

Last month (on September 26) a new long-term contract was signed between the program's current sponsor, The Coca-Cola Company, and the Motion Picture Division, covering production of the official World Series color films. This is the fourth year of sponsorship of Coca-Cola.

Available on Free Loan Basis

The sponsor's agreement provides that prints will be made available to schools, sports groups, clubs and civic organizations on a free-loan basis, as always. Distribution by the major leagues will be augmented by State Department, Army and Navy bookings. In addition, 16mm color prints may be obtained by local organizations through the bottlers of Coca-Cola everywhere in the free world.

The Giants-Yankees games were covered by five camera crews. Three of the cameras were posted behind the plate, at first base and at third base in San Francisco's Candlestick Park and in the often gloomy confines of Manhattan's Yankee Stadium. Color speeds and latitudes are thoroughly tested by the shadows and long reaches of these stadia. A fourth camera is focused entirely on the outfield, armed with superb zoom equipment; the fifth crew has a roving assignment.

Two Crews Shot Slow Motion

To continue the slow motion photography (a spectacular addition to the films of recent years), the third base crew was equipped with one camera shooting 64 frames a second and another which was set to depict key plays in even more detail at 128 frames per second.

Earlier features in these pages have covered the colorful history of the League's motion picture pioneer. But highlights of his career bear repetition as Lew Fonseca begins this 29th consecutive year of this impressive sports education and promotion program.

Mr. Fonseca launched his baseball career in 1921. He shared honors with Babe Ruth as the winner of the American League's batting title in 1929, hitting for a lusty .369 average. After serving for two years as manager of the Chicago White Sox, he turned a hobby into a full-time career with the founding of the first motion picture division for the American League. In 1959, he received the J. Lewis Comiskey Memorial Award for "long and meritorious service to baseball."

Premiere Film in January

The 1962 World Series color film will be released in early January, following a long-established custom of coast-to-coast press previews for sports writers in metropolitan centers. But the real story begins as those first prints begin to move by MATS and on shipboard to the film's top-ranked audience: the men in the armed forces at bases and at sea around the world.

1,000 Physicians View Live Telstar Telecast from Europe

☆ The first live color telecast from Europe, using Telstar, the communications satellite, was successfully received in Washington, D.C., recently. It was viewed by more than 1,000 physicians attending the 12th International Congress of Dermatology.

A panel of physicians in England presented six patients during the 17-minute satellite telecast. At the same time, the British doctor and a panel of American physicians were in voice contact by transatlantic telephone cable.

Your ONE source for FILM PRODUCTION

Alexander Film Co. is your ONE source for ALL creative and production services: Television and Theatre Screen Commercials, Long-Length Motion Pictures, Slide Films. The 26 acre Alexander studio-city houses every facility, every film production need . . . script creation, stage production, art, animation, black and white and color processing, sound recording. You deal with only one supplier.

And in colorful Colorado all outdoors is your stage, with 300 days of sunshine every year, breath-taking mountain scenery, plains and farming country . . . all within 30 minutes drive of the Alexander studios. But, if your requirements are for other locations, remember this: *Alexander goes anywhere!*

New Motion Picture Displays Efficient Industrial Storage

☆ Solutions to the costly effects of haphazard, inefficient industrial storage are portrayed in a new sound color motion picture released by Vidmar, Inc., of Williamsport, Pa., for distribution to industrial management.

The film, *Efficient Industrial Storage*, presents a storage system designed on a modular basis that provides a custom approach to storage requirements of any industrial plant.

Vidmar produced the film to help management analyze the effects of disorderly industrial housekeeping while visualizing specific means for correcting them.

— *Model of industrial storage*

Showings of the film can be arranged by writing Vidmar, Inc., 2323 Reach Road, Williamsport, Pa., attention: Robert E. Berger, general sales manager.

Schering's Veterinary Division Shows Antibiotics for Animals

☆ *Veterinary Experience with Griseofulvin,* an 18 minute color film produced by Glaxo Laboratories of England, has been made available by the Veterinary division of Schering Corporation. The film depicts the results obtained with the use of griseofulvin, an antifungal antibiotic, in cats, dogs, horses, and cattle. Microphotos and other illustrations of fungi invading the hair shaft show the effect of griseofulvin on animal and skin disease.

Designed for showing at local and state veterinary association meetings, a number of prints are available without cost from the Audio-Visual Department, Schering Corporation, 1011 Morris Avenue, Union, New Jersey. Requests for prints should bear alternate dates to assure availability.

Behind the Scenes at Seattle

☆ A post-script on audio-visuals at Seattle's World Fair is the feature of our next issue.

— *Star talent takes the stage at the Gibson show, while screen "sends" the message at right above.*

Showmanship Delivers the Orders for Gibson

Dealers, Distributors Re-Visit Hawaii to View Company's 1963 Product Lines on Stage and Screen

THE GIBSON APPLIANCE people have combined travel and "showmanship plus" in recent years to build an enviable record of sales in that highly competitive industry. Two years ago, Gibson dealers visited Hawaii, last year it was Panama and last month the company's 1963 product line was unveiled once again in that Pacific island paradise.

Some 4,000 distributors, dealers and their wives traveled to the Hilton Hawaiian Village Hotel via Pan American chartered jets to attend five different performances of a colorful sight/sound, live and filmed show, staged and produced by Wilding, Inc. Star talent included John and Marjorie Raitt, Jacqueline James, Doug Pledger (San Francisco disc jockey) and comedian Boris Aplon. A preview of next year's destination (Nassau in the Bahamas) was furnished by the appearance of "Peanuts" Taylor and his island musicians.

Follows Pattern of Success

This year's Gibson show followed previous Wilding successes for the company. Product was unveiled via two-screen Vista-Strip slide-film presentations that prefaced "live" introductions of the new refrigerators, freezers, air conditioners, ranges and dehumidifiers. Seven original musical numbers, written and conducted by Lloyd Norlin, were show highlights. Sing-along sessions at the show openings and closing brought audience empathy.

Theme of this 1963 Gibson Show, carried out in music and skits, was "You'll Be Glad You're Selling Gibson" and from the company's advance order book, apparently a lot of dealers, nationwide, are just that. Order-taking sessions wind up each year's show and the advance booking for the 1963 trip to Nassau is very heavy.

Behing the scenes, Wilding technicians were at the controls

Life Tie-In a High Spot

Producer for Wilding, Inc. was Leon Kreger; the Gibson Show was directed by Byron Keath and written by Tom Clark. A high-spot of the show was a LIFE Magazine advertising tie-in which played a major role in the finale. Vista-Trigger visuals played the company's fall advertising pages in this book to preview "name" participation for the dealer audience.

Product was "live" on stage, but features went wide-screen —

FROM ROBINSON P. RIGG'S VIEWPOINT

American Management Association Sets Up Outpost at Heart of the Common Market

☆ The American Management Association has set up an outpost in the center of the Common Market, in Brussels Management Center Europe, under the management of AMA staff man, Milton Rusk.

It is a highly organized seminar center with simultaneous translation facilities in four languages (very necessary in Europe where there are as many languages as countries) and well equipped lecture and discussion rooms. Since opening in September 1961, over 850 executives from all European countries have attended courses there.

I went along in August to catch up on Common Market matters at a course, "How To Do Business In The Common Market." Of the 60 people who attended, 40 were from the States, which shows more than usual interest in Europe.

Management Center Europe organizes courses in other European countries too—by film. Speakers are filmed at AMA's headquarters in New York, assembled on 16mm reels and sent to Brussels where Milt and his staff study them and have translations in French, German and Italian recorded on tape.

Then a staff man goes to Germany or Sweden, as happened this summer, and presents the seminar on film. He acts as Chairman and answers questions, introduces local specialists and leads the discussions but his main speakers are the top men in their field—on film. Those who can't speak English hear the taped translation through their earphones just as though they were getting a live simultaneous translation.

The result: The course is taken to the students at minimum cost and they get the best instruction possible, just as if they were at AMA in New York. How about that system for overseas agents' or sales meetings?

A tip on how to run meetings with Europeans: Unlike American or British executives, Europeans are not used to discussing aspects of their work. They report to their bosses and give orders to their subordinates, but rarely carry on a free and easy exchange of views with equals in related departments. At seminars this attitude puts a brake on discussion, so encourage an English or American member of the audience to lead off. Soon the Germans, French, Belgians and the others will be in the thick of the argument, but they need a spur.

French Center Completes a Survey of Outlets for Sponsored Film Distribution

☆ Pierre Bruneau, the Director of the Center for Study and Distribution of Informational Films (C.E.D.F.I.) tells me that his organization has recently carried out a survey of distribution outlets for sponsored films in France. The results of the survey are contained in "Le Cinema dans l'Enterprise" published by C.E.D.F.I., a first-hand account of the techniques of sponsorship and distribution in France.

It is divided into five main parts: Publicity films (planning, distribution and overseas promotion through film); Rural films (planning and showing them); Information films (presentation and outlets for showing them); Films for internal use (techniques and methods of presentation); Filmstrips (their place in the audio-visual plan).

The Federation of French Industries is also looking at distribution and has made arrangements in the Regional areas for regular showings. Headquarters in Paris arrange films into programs according to the interests of the audiences and sends them round the Regions. United States firms may also participate in the scheme, for which there is a small charge per showing.

Disadvantages are that the sponsor has very little control of the film once it is on the road and there is no guarantee of the numbers who will see it.

Advantages are that the system is operated by French industry to show its own films and it is in the interests of the organizers to whip up the appropriate audiences or the French firms will want to know why not. Also, it is a simple and convenient way of covering France, if you do not have an active man there who is experienced in promoting your films.

What do you have to lose?

In the case of Eve . . . she lost everything and changed the destiny of mankind. In the early days of kinescope, producers also had quite a bit to lose, due to poor quality process and transfer work of their productions. Today, the trick is not to lose everything, but to keep loss of original quality to a minimum. At Acme Film Laboratories, it is possible to obtain "live" film quality due to Acme's revolutionary techniques and technological advances which have been as dynamic as the industry itself. In keeping abreast and ahead of the state-of-art, Acme has made many modifications to equipment and services. This "in-house" capability has been obtained by years of experience and the acquisition of most modern equipment and skilled engineers and technicians. Today, Acme is the only motion picture laboratory offering all standard lab services plus the added accommodations of videotape duplicating and videotape transfer to film. Progress such as this never stops at Acme . . . a firm dedicated as the pace-setter of the industry. For complete information and prices, write: **Acme Film Laboratories, 1161 North Highland Avenue, Hollywood 38, California.**

PETER RIGG'S COMMENTARY:
(CONTINUED FROM THE PRECEDING PAGE)

sponsored by Farley's Infant Foods Ltd. of England and produced by Eothen Films.

We are proud of *Janet,* not only because she was honored in the Festival's Health & Mental Health Category, but because the film is the most detailed history of pregnancy and birth ever to be shown to lay audiences in Britain. It was created to reassure mothers-to-be at ante natal clinics, in the belief that pain is born of fear—and fear is born of ignorance.

There's controversy about it being shown to teenage girls at school. Farley's will sell more baby food and there could be a lot more painless births and happy mothers among those who see this film.

* * *

Fiat Pavilion's "Italia" in Circarama Draws Capacity Houses at the Milan Fair

☆ One of the big attractions at the Milan Fair this year is the Fiat Pavilion Circarama. It's history now that the first Circarama was designed by Walt Disney as an attraction at Disneyland in 1955 and it is still going strong. Then in 1958 this remarkable film presentation system with its 36° screen was an outstanding feature of the United States Pavilion at the Brussels World Fair and in 1959 it moved to Moscow with the American Exhibition.

Circarama is a sure-fire draw at any exhibition and the public never tires of the novelty of being "within" the motion picture and actually taking part in the action.

In 1961, Fiat, Italy's largest automobile firm, sponsored a 20-minute Circarama film, *Italia,* produced by Walt Disney Productions in conjunction with Royfilm of Rome. *Italia* is a wonderful tour of Italy from the Alps to Sicily and, as we speed along the roads, by Fiat car of course, we visit Venice, Rome, Milan, Naples—the old towns and the new—the Forum in Rome and the Fiat works in Turin.

The camera team with their special Circarama cameras covered 14,000 miles in their search of Italy and Italian achievement. One journey to Rhodesia in Africa covered the Kariba dam, in which Italy played an important role in construction.

Fiat's Circarama show differs from previous presentations in that there are *nine* instead of eleven projectors and the film is projected in its original 35mm version. Each projector covers 40′ of the screen area which totals 250′ in length by 22′ in height. The theatre is 80′ in diameter and 50′ high and was erected specially for the Milan Fair. Last year it was seen at the Turin Exhibition.

The Fiat company is justifiably proud of their bold venture in audio-visual presentation, as the first industrial organization to sponsor a Circarama production. It will always draw the public and can be mounted at national or international exhibitions which are justified by a large general public gate. The Pavilion is dismantleable in sections and can be re-erected without difficulty. The six channel stereo-sound system and the film projectors were designed by the Milan firm, Microtecnica.

Mobile Export Sales Center, With Visuals and Sound, Is Mr. Entwistle's Home on Roa

WASHINGTON FILM COMMENTARY

by Mary Finch Tanham

Washington Correspondent for Business Screen

☆ What a summer! For three months, perspiring tourists have been sardined in stringy lines for blocks around the White House. The traffic jam on Constitution Avenue has been like the five o'clock rush-hour, only station wagons with luggage racks and kids in the back have far outnumbered limousines with Vips and phones in the rear seat windows.

To meet a real need for an information program to serve these visitors, the National Capital Region of the National Park Service set up film showings in strategic spots around the city. In the assembly room of the Jefferson Memorial, for example, one could see the U.S. Army Chaplain's *One Nation Under God*. At the Haines Point Visitor's Center, Esso's *Welcome to Washington* was met with enthusiasm and, at the Nature Center, *George Washington's River*, produced by the Public Health Service, was threaded up for newcomers to the area.

In other parts of the city, a "nature van" mobile unit traveled with films to the public parks. And now that the old home town is back to normal, the films will be shown to the thousands of school children who make field trips to the capitol city.

* * *

Capital Filmakers Lose Friend as Marian Jarnigan Retires

Those who have had any business with the Motion Picture Service of the U.S. Department of Agriculture during the past seventeen years will be extremely sorry to learn that Marian Jarnagin has retired. Mrs. Jarnagin was Administrative Assistant to four different chiefs of MPS, treasurer for the Washington Film Council, and friend to all.

* * *

"Sardinian Project" Shows How Technical Assistance Can Help

Recently, in the presence of about 150 high officials in Washington, a fascinating 16mm film, titled *Sardinian Project*, was presented to Frank Coffin, Deputy Director of the Agency for International Development (AID) on behalf of the Secretary-General of the Organization for Economic Co-Operation and Development (OECD). Count Ottino Caracciolo de Rorino, Washington's regional OECD head, described how the project was developed and implemented, and then screened the film.

The charm and impact of this color motion picture, which was shot in Sardinia by Italian cameramen, lies in its portrayal of the effect of technical assistance on the impoverished inhabitants of the small isle. Here, 100,000 people lived in 41 villages. Their climate was harsh and cruel. Their existence was bare, stark, primitive.

And then one day the OECD specialists arrived to tell the women about a whole new world of health and nutrition. Other specialists came to tell the men of the island how to eradicate the diseases of their olive trees. A new cooperative for carpet weavers was formed, breathing life into a dying industry with great potential.

Gradually the island comes alive. From an arid wasteland, it is transformed into a *developing* community of the modern world. The project's success is overwhelming, and the screen viewer is excitedly struck with the importance of OECD's program.

Sardinian Project is being distributed in several languages. It is an eloquent answer for those who ponder whether or not people to people programs really work.

Taylor in Accident Prevention Post at Public Health Service

☆ Bill Taylor, who has been with Creative Arts Studios, Inc., of Washington, D.C., for fifteen years, has been named new Chief, Audio-Visual Service of the Branch of Information Services, Division of Accident Prevention in the U.S. Public Health Service (H.E.W.). In his new job he will gather together existing films and audiovisuals which deal with traffic safety, seat belts, driver training, poison prevention, recreational, family, and home safety.

* * *

Legg Heads Paragon Films

☆ W. B. H. "Bill" Legg, Jr., is the new owner of Paragon Films of Washington, D.C. He will replace Frances Millington, who has retired but will consult for the firm. Legg has named J. Robin Ward as production director for Paragon. Ward recently produced and directed *One Man's War*, which was shown at the 1962 Venice International Festival. Don Williams will be Sales Director under the new setup.

Space Cameras Report Failure, Success of Echo A-12 Tests

☆ Two remarkable sequences, filmed in space by rocket-borne cameras, climax a new N.A.S.A. (Goddard Space Flight Center) documentary film with the deceptively prosaic title, *The Echo A-12 Vertical Tests*.

The Echo spacecraft, it must be recalled, was the giant balloon which burst into shreds on the first launch, but which was successfully inflated, hundreds of miles above the earth, the second time around.

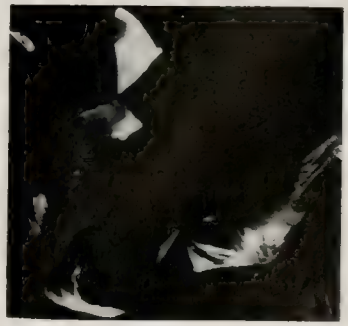
Inspiring Story of R & D

Both failure and triumph have been captured on film, as well as a research and development story which leaves one with renewed admiration for the wonders of man's imagination.

After opening scenes at the Goddard Space Center in Maryland — and animated explanations of the concept and mission of Echo A-12 — the audience is treated to the rare inside story of the way a spacecraft is born from a marriage of business and government. Vital preliminary testing is shown, conducted in the science-fiction atmosphere of the government's Langley Research Center; the audience then visits the vast and intricate production lines of the Aluminum Company of America and the Grumman Aircraft Engineering Corporation.

Sewing the 17-Story Balloon

In the strange inflated buildings of the Schjeldahl Company in Minnesota, "space seamstresses" make balloons taller than 17 story buildings, and pack them into cans the size of duffel bags; at Douglas Aircraft Company in Santa Monica, California, the hitherto secret production line of the Thor missiles are on screen; and, finally, at Cape Canaveral, the great shots in space are viewed as they were seen on monitor sets on launching day.



This is the sort of film which, with proper distribution, could help push young scientists into the space field. In one exciting scene, for example, the great shiny silver balloon, which looks incongruously fragile and powerful, is inflated to the "destruct" point. It collapses

(CONTINUED ON NEXT PAGE)

Filmed in space, sequence above depicts successful Echo A-12 balloon test on July 18, 1962. Top scene, 200 miles above earth, shows 3-foot canister about to explode and, in second scene from top, it releases folded Echo balloon which begins to inflate; balloon is reaching diameter of 135 feet in subsequent two scenes, all made within 30 seconds as, finally, the Echo A-12 Vertical Test No. 2 is completed and the world's largest spacecraft is launched to fly, fully-inflated, 800 miles above Cape Canaveral.

Below: the first Echo A-12 test, on January 15, 1962, was a failure as the test balloon exploded 250 miles up in outer space. But the camera brought back this scene of destruction that lead to the eventual success on July 18th.

WILL YOUR NEW EMPLOYEES START ON THE RIGHT FOOT?

Slidefilms Assure Accuracy

One of the main causes of employee turnover is the lack of clear job instruction. The supervisors' careful induction of new employees, their accurate instruction as to the precise job requirements, result in better work, improved productivity, and greater contentment among the personnel.

"Progress of American Negro" Evaluated in a New USIA Film

☆ While Americans observe the centennial celebration of Lincoln's Emancipation Proclamation, those who hate democracy point derisive fingers at the way we are treating the American Negro. Uncomfortable, ugly incidents in the South, which soil the front pages of our own newspapers, blacken headlines around the world, too. And we have done little to answer our critics.

Now, however, the United States Information Agency plans to evaluate on film the *Progress of the American Negro*. Additionally, a new award-winning documentary about Washington, D.C.'s, Howard University is being distributed throughout the world. At least, it seems we are taking positive steps with our best foot forward.

Progress of the American Negro will be directed by Willard Van Dyke and is by scholar Louis Lomax. According to George Stevens, Jr., U.S.I.A.'s Film Chief, it will tell "what strides we have made, for all our failings."

The First 100 Years deals with Howard University's growth from a small institution, founded in 1867 after the Emancipation Proclamation, to its present status as one of the most important educational institutions in the world. The 28 minute sound-color film was written by Ernest E. Goodman, Howard's Director of Information Services; it was produced by Norwood Studios of Washington, D.C., and it has just been awarded the 1962 Distinguished Achievement Award by the American College Public Relations Association.

According to Howard University officials, who are extremely satisfied with the enthusiastic reception of their film, *The First 100 Years* is the next best thing to a trip to the campus. It is being utilized for recruiting purposes, alumnae relations and community education for churches and civic groups.

And USIA, of course, is proudly screening scenes from the film which show exciting modern laboratories adjacent to the old 19th century buildings, drama groups which have gained international re-

Pictured on set in Hangar AE at the Atlantic Missile Range during filming of "Echo A-12" are (l to r): cameraman Vandenburg (behind Arri); NASA photo coordinator Tony Loehner; Goddard photo chief Jim Burton; and film's writer-director, John L. Washburn, facing crew.

pute, the famous Howard University choir and the University library which houses the largest collection in the world of information on Negroes.

In other scenes, 700 educators and students of all races, in academic procession, march across the pretty old campus, and we find that Howard University has the largest percentage of foreign students in the United States.

This film is available on free loan from the Division of Information Services, Howard University, Washington 1, D.C.

Preview Five Films on Basic Research for Secondary Schools

☆ An all-day preview of *Experiment in Progress*, five films on basic research for secondary schools, was recently held in the large auditorium of the National Science Foundation. Each film that was screened incorporated interviews with well known scientists as well as lab scenes of actual experiments. In the film *Selective Embryonic Cell Adhesion*, for example, Dr. Malcolm Steinberg of the Department of Biology of Johns Hopkins University discussed embryology, conducted experiments on chicken hearts and livers, and augmented his lectures with imported time-lapse film.

This group of motion pictures was produced under a grant from the National Science Foundation. Project Director was Dr. Karl Frank, Deputy Project Director was Dr. Zaboj V. Harvalik and Coordinating Director and Producer were Evelyn Davis and Dorothy Looker of Eade Enterprises, Inc., Washington, D.C. Potomac Films, Inc., shot the films, which are being distributed through Science Service.

The films include: *Investigation of the Ocean Bottom* with Dr. Harris B. Stewart, Jr., Deputy Director and Chief Oceanographer of the U.S. Coast and Geodetic Survey, U.S. Department of Commerce; *Electronic Computer Language Translation* with Mrs. Ida Rhodes, Mathematician in Charge of the Mechanical Language Translation Group, National Bureau of Standards; *Elementary Particles*, with Nathan Seeman, Physicist, U.S. Naval Research Laboratory; *Irradiation Produced by Shock Waves*, with Dr. Kenneth Lobb, Aero Research Administrator, U.S. Naval Ordnance Laboratory.

Below: scene in Howard's picture, "The First 100 Years", shows Dr. James M. Nabrit, Jr., president of university, with Vice-President of U.S., Lyndon Johnson.

Captioned Films for the Deaf Program Gets Major Boost as President Signs Bill Authorizing Increased Budgets

☆ As BUSINESS SCREEN goes to press, there is word from Washington that President Kennedy has signed Senate Bill S2511, thus affording a small shot in the arm to the motion picture industry.

As summarized in Congressional Report No. 1870, "S2511 would strengthen and improve the existing program of providing captioned films for nonprofit purposes to groups of deaf persons, by authorizing the production and distribution of training films for the deaf, the conduct of research in the use of educational and training films for the deaf, and the training of persons in the use of films for the deaf."

$1½ Million in New Budget

For the new program the House and the Senate have authorized a budget ceiling in the amount of 1½ million dollars, which greatly supplements the regular budget in the past of approximately $250,000 which the Office of Education (HRW) has been administering since 1959. Unofficial word is that $1 million will be available in the coming year.

That the old budget was insufficient can be proved by the fact that it was possible to serve only 10 percent of the deaf with slightly over 100 films which were booked in advance from one to two years. And out of these films with subtitles, only 14 could be categorized as "educational" or "documentary." *NO* training films were included.

Films for Language Ability

According to John Gough, Chief of Captioned Films for Deaf, Educational Media Branch, U.S. Office of Education, H.E.W., an expanded program will point the way to new experiments with specialized films to develop language abilities in the deaf. "And there may be a significant breakthrough in what can be done for the illiterate and the retarded," he says.

In the future, films on occupational training will be needed, as will specialized motion pictures on personal adjustment. There is an increasing need for social study films for the elementary school child with hearing problems.

Safety Films for Deaf Drivers

Safety films will be included for deaf drivers, who are often more careful than those with normal hearing. In this latter category, Ford Motor Co., Ohio Oil Co. and the Chicago Police Department are already cooperating with USDE on specific projects for these handicapped persons.

As Senator Claiborne Pell of Rhode Island said in subcommittee hearings: . . . "Surely we must do better than we have. It is not commonly understood that the deaf child, in comparison for instance to the blind child, has a much more difficult learning process. Being able to hear is vital to the whole learning process.

"We Cannot Turn a Deaf Ear"

"It is a regrettable fact that many deaf children do not even know their own name by the time they are 6 years old. Surely we, in turn, cannot turn a deaf ear to those who desperately want to learn, be they children or adults. In this connection, I want to emphasize that this program can also be very helpful in enabling deaf adults to make their full contribution to society.

"I mentioned earlier that this bill would also help to stimulate much needed research in the use of captioned films and provide for training of professional people in their use. Thus, this bill represents a well-rounded, thoroughly proven program which is vitally needed, and I am hopeful that prompt action will be taken on it."

That action has now been taken. Let industry leaders now help the government make the very most of it.

* * *

At statue of Galludet, first teacher of deaf, are Malcolm Norwood, Anita Carpenter, John Gough and Kathy Agins, staff of Captioned Film Program.

Foreign Affairs Student on World Tour in "The Journey"

Early next year, theater audiences around the world will be seeing an unusual 22 minute Paramount feature short, shot by Mattco Associates of Chicago, written by Coe-Peacock, of Washington, and filmed in 12 different countries.

The Journey is a story of a young graduate from the Georgetown University Department of Foreign Affairs whose father gives him a trip around the world. On the journey, he sees such things as the Rembrandt collection in Holland, belly dancers in Turkey, and "twist" dancers in Spain; he follows a day in the life of a beach boy in Hawaii and enjoys a sit down dinner with a Tokyo family.

Bob Allen, Hollywood actor and industrial film producer, is producing this film, and toured 50,000 miles with a crew of nine and 1,250 pounds of equipment.

Agriculture to Name Winners at Centennial Film Festival

Everyone interested in farm films is awaiting with keen interest the event of November: the U.S. Department of Agriculture's Centennial Film Festival!

The Festival and Visuals Workshop are scheduled for November 7, 8, 9. Speakers include the Secretary of Agriculture, Orville L. Freeman; James Robertson, V.P. for Network Affairs, National Educational Television and Radio Center and NBC News commentator David Brinkley. America's Day, honoring Canada and Latin-America, will be held November 8th.

At last report we logged some 101 entries covering such logical categories as animals, crops, farming methods, farm engineering, food production, the history of agriculture, farm home films, marketing, pests, natural resources and farm science.

Films from Canada as well as the best of U. S. pictures will compete for awards honors. The finale, in early November, will be held in the Department's Auditorium.

NASA's "Your Share in Space" Released for National Showing

☆ *Your Share in Space*, a new film on America's space exploration program, past and future, has been released to schools, community organizations and television stations through Association Films, Inc.

The 28-minute, color motion picture, produced by the National Aeronautics and Space Administration (NASA), describes the nation's space aims from the successful launchings of astronomy, weather and communications satellites to the forthcoming manned landings on the moon and planets beyond.

The weather satellites, according to the film, have proved their worth by providing early storm warning information that resulted in the mass evacuation of areas struck by hurricane Esther last year. Of more long-range significance will be the information gleaned about the origin and nature of life, the picture notes.

Included are sequences on Echo I (the inflatable sphere that is still visible from the earth); the five Tiros weather satellites; solar cells (that have opened up the fascinating world of solidstate physics); computer devices that

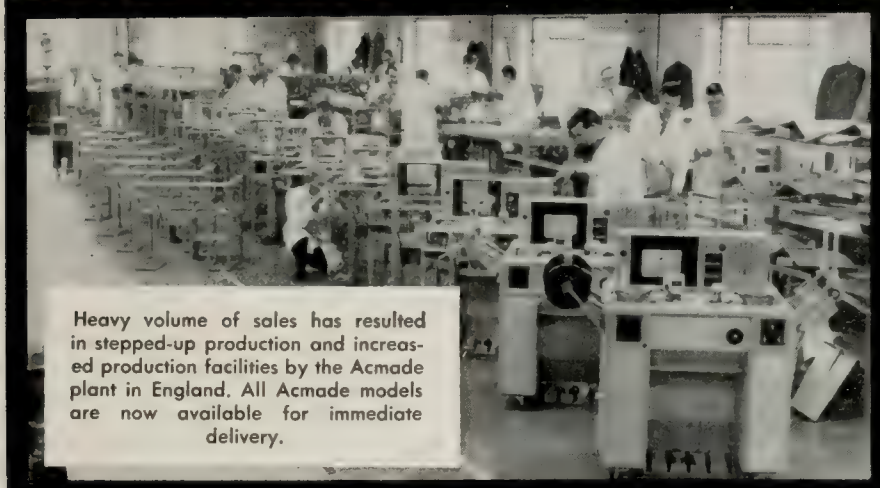
Purpose and Use of Testing Explained in 30-Minute Film

☆ A better understanding of purpose of tests and use of scores is the purpose of a new minute film, *Facing the Test*.



The film is designed to be particular use to the student his counselor, and also helpful teacher and parent.

Produced by Educational T ing Service, Princeton, N.J., in sociation with the Georgia S Department of Education, the f explains what standardized t are for, how they sample knowledge, what sort of questions t contain.

Told from the point of view a teenager, the film provides us information for the student bef he actually takes the test. Thro explanation of test questions, d onstrations of how to use the swer sheet, and discussion of use of the test results, the stud is helped to understand the p poses of his school's testing gram.

This is the first of two f being produced by Educati Testing Service. The sec *What's the Score?*, to help c selors and teachers interpret results, will be ready in 1963. quiries may be sent to Films Testing, ETS, Princeton, N.J.

ACMADE TUNGSTEN PRECISION SPLICER

This moderately priced splicer incorporates new precision features which insure absolute accuracy and safety in splicing. Three models are available: Model 16-16mm., Model 35-35mm., Model 35-16 combination 35mm. and 16mm.

1. The combination 35mm.-16mm. Model features retractable 35mm. and 16mm. pins. This permits center placement of the 16mm. pins for A and B roll splicing.

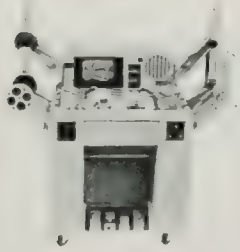
4. Specially designed right-hand pressure block permits easy and accurate back-scraping on all models.

5. Tempered steel springs provide perfect pressure, positioning film firmly during scraping and splicing processes.

2. Stainless steel blocks are precision fitted with Tungsten-Carbide inserts for cutting. Cutting edges will remain sharp and last forever.

3. Attached scraper adjustable for depth — fitting jig incorporated on splicer base.

6. Thermostatically controlled heater maintains constant 100 temperature.



Model 16 — $299

Model 35 — $299

Acmade Foot-Operated Splicer with Tungsten Tipped Blades

Combination
16mm-35mm
Model
$1495

This splicer is constructed, as is usual with ACMADE products, of the finest materials and workmanship. All castings are of the best quality and the top body and cutter arms are seasoned to prevent distortion after machining. The machining is carried out to limits of ± .0005" in order that the cutter blades shall close in a dead parallel manner. The cutter blades are made from stainless steel with Tungsten Carbide inserts, and afterwards ground lapped and polished to a limit of ± .0002" thickness and the cutting edges relieved by 1°. The Tungsten Carbide inserts will have indefinite life and will not require sharpening as with other types. A heater unit is installed in the top body of the machine. The top light in a well glass fitting is attached to the body of the machine and also an inspection light in the waste bin together with cement bottle and brush. A scraper block is supplied and also a scraper block setting jib and support shelf rubber-covered. The whole machine is finished in first quality grey hammer and all metal parts other than cutter blades are hard flash chromed.

What Makes a NARRATOR?

by C. S. (Bud) Rice

WHAT DOES, INDEED? How much does his contribution mean to the painfully gathered, integrated motion picture on which he is about to be superimposed? Enough to cause concern and make worthwhile — in fact, essential — a good culling of available talent. After some reflection, this writer sees four major ingredients in successful narrating, a fifth of marginal or subsidiary value — and a crowning sixth attribute that crosses the goal line.

Naturally, *basic voicing* is just that — fundamental. Good enunciation, freedom from accent, pleasant tonal quality, even level must also be augmented by range in expression adequate for connoting a certain degree of the emotional spectrum — amiability and gravity, sympathy and righteous indignation.

Dependability a Key Factor

While an announcer/narrator may seem to attack all these values pretty well by evidence of a brief listen to radio-TV work or audition tape, does he have *dependability*? Gone is the 30-second announcement ability, the sound-good short spiel of radio and TV, and dollars loom high as — too late — you find fluffs, wavering, and other misses wearing you down and skyrocketing overhead.

Lengthy voice tracks do require a practical guarantee of sustained good delivery, as the motion-picture producer early learns.

And Then Comes *Application*

All right, then, what comes after basic voicing, dependability? *Application*. That's the quality that comes to the fore when the narrator — for one thing — is not listening to himself. (Many do so.)

It's the extra 'put-across' that comes from his projecting himself into the action, his sensing — as it were — just what all those creative hours of camera work and editing, and what went before, have put together. In doing so, he approaches the exact right emphasis for the voice track — neither gross nor underdone.

Will He *Understand* Subject?

We come now to a more subtle aspect of persuasive narration, *understanding*. Of course, application goes a long way toward this comprehension that we want. We cannot always obtain 100% understanding — for one thing, many of today's non-theatrical films are too complex for the layman, the practicing narrator.

But if your film "voicer" has some knowledge or experience with the subject of your picture — and he has the foregoing other attributes — you're going to get forceful, perhaps really-moving narration. The narrator with understanding can't always be found for the technical film, but it's worth the try many times over.

Well, we've discussed three basic stepping stones, added a special fourth one for truly effective narration. Basic voicing, dependability, application . . . understanding. A sub-criterion falls into place next. It has fractional import because — with all the above used in performance — it should only require light touches.

This is *response to direction* — for that over-all guidance the narrator cannot always have within himself, for sequence direction where he misses the story-line's intent. Sometimes the better narrator actually responds less easily to the director's bidding, since the voice is surer of himself than the less proficient man.

But, again, we are talking about

TELIC, INC. ■ FILM CENTER ■ 630 NINTH AVENUE, NEW YORK 36, N.Y. JU 2-3480

ELWOOD SIEGEL, *President & Executive Director*
EDWARD F. BOUGHTON, *Vice President & Executive Producer*

CO-PRODUCERS OF FILMS TO INFORM, PERSUADE AND EDUCATE
SCENE TAKE SOUND Telic, INC.

only a minor area of performance 'musts.' Let us go on to the 'clincher' in real, galvanized narrating.

This last, so-significant measuring stick poses some challenge in description, seems in part undefinable, at first. But we can put it down in words: *dynamic, penetrating, moving work.* These are the qualities in the air when the phrase "You could hear a pin drop" is heard. They are the excellencies of performance that send shivers up human spines.

Sound Technicians Know This

No, motion-picture narration does not offer the real solo performer's opportunity in other media because the voice is only a contributing factor. But there *can* be narration that mentally moves a sound technician a hundred miles away from his decibel meter in the middle of a routine day. And the same man who narrates like that is the one who'll do it again and again.

So, happy hunting! The chances of perfection in narration are slim — as in every human endeavor. But why not analyze in order to put the best at — and on — your side.

EDITOR'S NOTE: We are indebted to Mr. Rice for opening up this subject for our readers. It is our aim to list responsible, experienced narrators available in early issues of this magazine.

Don Carter Stars in 65 Films Giving Bowlers Instructions

☆ Here it is—the first ever—a new instructive bowling series on film, *Don Carter Bowling Tips*. Produced by Holland-Wegman Productions, Buffalo, N.Y., the film series is specifically designed to help bowlers improve their game. The series was released September 24.

Don Carter's charm and skill come through strong as he explains the bowling problem and its solution. To make the explanation clear and concise, animation, high speed photography and stop motion are used. The viewer can see ball and pin action, thus increasing his understanding of the game's strategy.

The series includes 65 programs, each five minutes long. This gives wide flexibility for across-the-board showings, or combining for 15 minute shows. The complete series has been produced.

The bowling tips apply to women and children as well as men, and are practical for any style of bowling. It is directed at the 40 million active bowling enthusiasts and has appeal for the armchair sportsman.

The series is available for TV station or sponsor purchase through Saturn Productions, Inc., 207 Delaware Ave., Buffalo 2, N.Y.

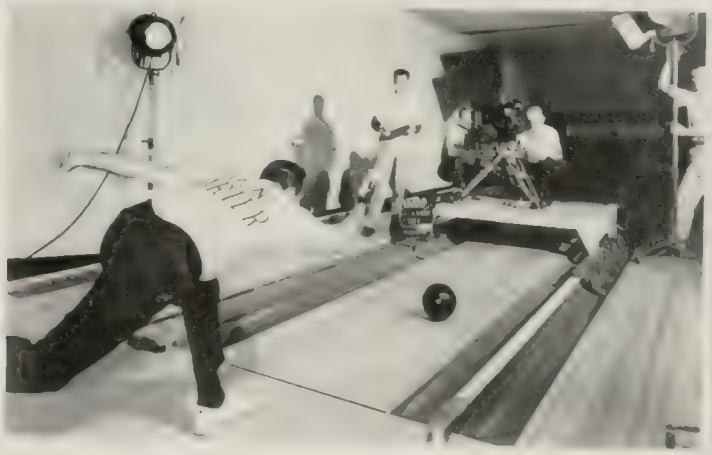
TWA's "Superjet to Europe" Released Via IVT, New York



☆ Two facets of the international air traveler's journey—scenes from the places he visits and the careful, precise preparation of the aircraft and crew that fly him — are shown in a new film, *SuperJet to Europe*, released last month by Trans World Airlines through the Institute of Visual Communications, New York. It is one of a series of new travel motion pictures produced for TWA by the Dudley Film Corporation.

SuperJet to Europe takes the audience on an armchair tour of England, France, Germany, Switzerland, Italy, Greece, Egypt, the Holy Land and India. The first part of the film shows how TWA's jet fleet is maintained, with scenes shot at the airline's huge mid-continent international maintenance and overhaul base near Kansas City, and how flight crews, hostesses and pursers are trained and checked at regular intervals. These scenes, photographed at the TWA Flight Training Center in Kansas City, show the electronically synchronized fleet of jet simulators in which pilots are trained and checked. TWA's Flight Training Center equipment and simulators are also used by other airlines and by Military Air Transport pilots.

Other new travel films in the TWA library describe in color and sound the scenic attractions, people, customs and industrial activities of England, France, Italy Germany, Ireland, Spain, Switzerland, Egypt, Greece and India. Two others, about Portugal and Israel, will be completed later this year. Commentary is by John Cameron Swayze. Running time for each is 25 minutes.

SuperJet to Europe runs 30 minutes. It is available through TWA district sales offices in 50 cities, and through IVT, 40 East 49th Street, New York.

Bowling star Don Carter displays form in a scene from one of the 65 instructional films recently completed by Holland-Wegman Productions.

VĪCOM, INC. A SUBSIDIARY OF ELGEET OPTICAL COMPANY, 309 CHILD STREET, ROCHESTER 6, NEW YORK

Foreword to a New Era for Industrial Films

by Dr. Hans Schaller

IN THIS AGE of international economic unions and the constant development of production and marketing techniques, the industrial film is approaching a period of utilization which could not be foreseen some years ago.

It is because the motion picture presents such a unique means of conveying technical and economic information in the perfect combination of sound and picture that it surpasses every other sales and marketing medium of communication.

More and more, the engineer demands good technical films to help him reach his customers more effectively. And, of course, the value of film to the public relations manager is well known, irrespective of whether it is released through theatrical or non-theatrical channels or broadcast by television.

In Western Germany, from time to time, there have been forebodings about industrial films; nevertheless they have gained ever-increasing recognition and today all the larger companies and many medium-sized firms make use of the film medium to reach their public. German films at the Third International Industrial Film Festival, which we are proud to host in West Berlin this month, include distinguished entries from such firms as Krupp, Volkswagenwerk, Siemens, Farbenfabriken Bayer, Mannesman, IBM/Germany, Demag, Henkel and other names well-known throughout the world.

My own company is represented by *Kahl*, the film which gained the premier award for the best German industrial film at our own national industrial film festival last year. Altogether our selection panels viewed 47 pictures, out of which they selected the 15 which represent this country in West Berlin.

Guest author: Dr. Schaller

My opinion is that competition is increasing worldwide and any public relations manager would be well-advised to be completely up-to-date on all of the latest techniques for utilizing the film medium in his company. After a close study of the relative importance of industrial films in a number of European countries, I have come to the conclusion that we are at the threshold of a new era.

Take Austria, for example. Next year Salzburg will be the site for the first industrial film festival to be held in that land, organized by Austria's Federal Chamber of Trade and Industry — not as a *national* festival — but as a German Language Film Festival to give a cross-section of industrial film production in Western Germany, Switzerland *and* Austria. I am sure that an event of this type will lend further impetus to the use of the film medium.

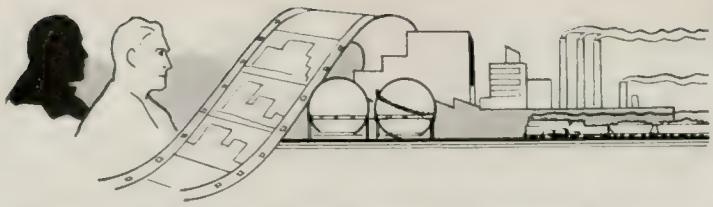
Many of us in Germany, on the eve of the International Festival, are looking forward with great pleasure to the English language films at Berlin (15 each from Britain and the United States) so that we can see the trends in *your* films. This is of particular importance to us in view of the possible entry of Britain into the Common Market and in view of the considerable number of U. S. firms with interests in Common Market countries.

☆ With this Issue, we begin the first of a series of articles written exclusively for BUSINESS SCREEN INTERNATIONAL by Europe's most distinguished industrial audio-visual specialists. Our first guest author, Dr. Hans Schaller of Allegemeine Elektrizitats-Gesellschaft (A.E.G.), is in charge of audio-visuals for one of Germany's most active and advanced sponsors of industrial motion pictures. Dr. Schaller was a member of the Grand Jury at the Third International Industrial Film Festival which was held in West Berlin from September 22-27th. These are his impressions on the eve of that event.

BUSINESS SCREEN INTERNATIONAL

THE WORLD COMMUNITY OF FILM MAKERS

The emergence of a world trade community that holds great promise for the economies of the free world has been further stimulated by recent United States' trade legislation in the Congress. England stands on the threshold of partnership in the burgeoning European Common Market, successor to postwar programs of cooperation which helped revive economies throughout the Continent.



Though the world remains imperiled by Soviet aggression, free nations have broken barriers, begun to dismantle national boundaries in their free exchange of labor as well as goods. And they are exchanging *knowledge of one another, of production methods as well as customs*, reaching new goals of understanding that auger well for their peaceful cooperation.

In this age of the *smaller world*, where sight sound images are shared through Telstar, with overnight post and swift jet travel across oceans, the International Industrial Film Festivals which began three years ago at Rouen, traveled to Turin in 1961 and were concluded in West Berlin this October, symbolize an era of amity and cooperation. They should also awaken our American readers to some important facts of life.

First of all, these events are sponsored by industrial federations, *manufacturer* groups, in Europe. The host in West Berlin was the German Confederation of Employers, equivalent of our own National Association of Manufacturers. This was no "kultur-fest" of film art lovers, nor a tourist attraction such as those at Cannes, Edinburgh or Venice. The European executives who attended were concerned with *industrial* film potentialities.

The *quality* of European films, their subtlety and very persuasive content, should begin to awaken U. S corporate managers who have persisted in ignoring these powerful tools. Europe's films, *made the right way*, are detailing construction projects abroad, selling Europe's goods and making friends. Superb color, excellent creative direction and design for *believable* messages, were noteworthy in the films shown at Berlin.

BUSINESS SCREEN understands that *the nations of the free world must trade to prosper;* that freedom from Communist ideologies goes hand-in-hand with jobs, productive economies. A growing list of subscribers abroad join with top management readers in the U. S. through the pages of this magazine as we explore new opportunities, better techniques, free exchange of films, production and projection equipment and services. —OHC

Opening a Plant in Europe? Audio-Visuals Can Help Locate Site, Inform Neighbors

So Many Firms are either setting up plants in Europe, or thinking about it that it may be helpful to consider some of the ways in which audio-visuals can smooth out the problems which are bound to arise.

At one time it was only the really big corporations that considered opening up plant operations in a foreign country and there was little competition for sites, labor or goodwill. Today it is not too easy to find the ideal site in Europe and if you do, you have to move fast.

Many Firms Looking Abroad

To give an idea of the competition, Kaiser Aluminum and Reynolds Metals are both looking for plant sites in the Common Market as are Hoover International, Vick International, Chesebrough-Ponds, Allegheny Steel and many others from the United States.

The Swiss firm, Landis and Gyr, is opening up in Southern Italy; the British Joseph Lucas Company is seeking new Common Market openings; Canada's Polysar has a plant in Belgium already and many other companies in Denmark, Finland and Britain have representatives on the look-out in Europe.

These Are Some Advantages

The main attractions are proximity to the market, favorable taxation and custom duty terms and lower than Stateside labor rates.

So how can a-v help?

1. Reporting on Sites: Let's assume an international plant consultancy firm like Fantus is engaged to carry out the investigation. They make their recommendations; normally a man from Head Office will fly over to look at the alternatives. If he can support his report with slides or a short movie showing the actual conditions — transport, neighborhood, housing for imported and local staff, and, of course, the site itself, in each case it will help the Board make their selection quickly without time-consuming visits to a number of doubtful starters.

2. Telling the Europeans: In setting up a plant in Europe, you have to see many people and tell them about yourself; local officials and banks, for example, to negotiate loans and favorable tax concessions. Why not show them a movie demonstrating how the company stands in its home environment, how the working conditions are really good, the plant buildings in good taste, the product one that the community will be proud to associate with. The statistics and documents you show will be evidence that you are safe to do business with but the motion picture will indicate that it will be a pleasure.

Film Can Allay Suspicion

Don't forget that many European cities have been there for hundreds of years and the communities sometimes resist change and are suspicious of newcomers. A prestige film about your own community can allay suspicion. The pattern of distribution of your film varies from country to country and there is an organization, Inforfilm, set up to help provide the widest coverage for a given area. The United States representative is Modern Talking Pictures and Business Screen will be pleased to supply a list of European representatives.

When it comes to hiring labor a movie on the personnel manager's desk can quickly show the working conditions and machinery in the home plant. Key workers will soon decide whether to make a change to your plant and the manager can size up his man by his reactions to the film. The majority of the labor force will be concerned mainly with wages, but the film can show the fringe benefits very effectively.

A-V to Save Training Time

Training of labor can be effectively undertaken with the aid of motion pictures and slides, saving time and the need for imported instructors.

Then, when the plant is in operation, the management has to build up goodwill in the community, to become a part of it. Here again films can help; to explain policies, show what it's like in the home country, bring the plant to the people as well as the customers.

And a final word of advice: People like to be spoken to in their own languages, so put a foreign language track on your films (magnetic or optical, whichever is the most economical) and make sure that the management can speak just a few words themselves — in the language of the audience.

Translate Your Film to Win Friends Abroad

by Albert J. Amateau

In 1961, according to Department of Commerce figures, U. S. companies doing business abroad had foreign sales amounting to $60 billion. In any man's language that's a large and important sum of money. It's not unlikely that for some individual firms their share of this foreign business may have meant the difference between profit and loss.

With the expected further advances of the Common Market, and with constant changes in the patterns of buying and selling throughout the world, those companies which need or want overseas sales must be increasingly promotion-minded. Just as they do in the United States, films can work with effective sales-power in other lands — provided they are tailored to do the job required of them.

Accepting "American Ways"

With the world grown smaller because of travel speeds and the broader, faster interchange of news and information between free world countries, there is a somewhat more ready acceptance and understanding of "American ways" than ever before.

Accordingly, many of the films produced by business and industry for domestic use may have a sound potential for use elsewhere. Still there are two major roadblocks to their maximum effectiveness. These need to be overcome before any films are released and used overseas.

The first of these is language. The second, of virtually equal importance, is custom.

The Problem of Language

Let us consider the matter of language. Throughout much of Europe, English is taught in schools as the country's second language. In India, with its 14 main languages and several hundred different variations in dialect it is the unofficial second language: Hindi will become the country's official tongue within a few years. In Japan there is a growing knowledge of textbook English.

So it goes around the globe. It must be borne in mind, however, that primarily those in other lands who know English to any extent are the intellectuals, the professional people, those in industry who have dealings in other lands. For some who have it as a second tongue, English is only a spoken language; others may write it with some fluency, and read it, but are not able to speak or understand it well in speech — especially where dramatic or vernacular expressions are used.

Put Track in His Dialect

Thus it must be recognized that while films with "American" English language tracks may serve some selected audiences fairly well they will not serve universally for "the man in the street". Even for those who may get the message in English, there is far greater acceptance and understanding if, instead, the track speaks to them in their own language.

A bond with the audience is established much more quickly and more solidly where the mental process of thinking from English into one's own speech is made unnecessary. In this way, too, slang, idioms, trade terminology which may be considerably different from country to country, and sim-

Amateau, Managing Director of Foreign Language & Cinema Service, Hollywood, California, and author of this piece, is an attorney and consultant on foreign trade, with an extensive motion picture background which included pioneering the production of American television and motion pictures in Portugal and Spain.

400 Yards From the Wall which imprisons over a million Germans in Communist Berlin, free enterprise from fourteen nations vied in friendly competition for international audio-visual's most cherished honor – the Grand Prix of the European Federation of Industry!

The Grand Prix is awarded to the O.E.C.D. country whose industrial films gain the greatest number of points at the annual International Industrial Film Festival.

Italy was this year's winner, the country whose economic progress since her entry in the Common Market four years ago has astounded the world. Italy is also the country which held the first-ever international industrial film festival in Turin in 1958; a country whose industry makes few films by comparison with the United States and Britain, but whose material is of a very high standard indeed.

One point behind, Germany was a close second, followed by France. The United States, Britain, Sweden, Switzerland and Denmark also won category awards.

Exchange of Information and Ideas of Greatest Value

The 200 delegates were industrial a-v specialists from Austria, Belgium, Britain, Denmark, Finland, France, Germany, Italy, Netherlands, Spain, Sweden, Switzerland and the United States. They agreed that the competition was an important part of the Festival, but to them the greatest benefit came from seeing the films, exchanging information and ideas and meeting each other.

The Berlin Congress Hall (irreverently called "The Pregnant Oyster" by the Berliners) was part of the United States contribution to the people of the city in 1957. Designed by Hugh Stubbins of Cambridge, Mass., it is without doubt the finest convention site in Europe. The two cinemas, each with five language simultaneous translation, superb projection equipment from 35mm, 16mm in all ratios, four sizes of slide projection, overhead projection, an earphone at each seat – all these factors ensure that a-v material is presented under optimum conditions.

In addition there are seven conference rooms ranging from 10 to 900 seaters, a 1500 sq. yard exhibition area, a 500-seat restaurant, a terrace cafe overlooking the river, bars, lounges, press rooms, a post office and a bank.

The Congress Hall is a show-place and parties of German and foreign visitors mingled with the delegates as we rushed from one cinema to the other. They joined us in the cinemas too as there was plenty of room; 1,400 seats in the large auditorium and 400 in the smaller theatre. I estimate that 5,000 people must have seen the industrial films in the five days of the Festival.

Festival Films Shown Delegates at Industrial Trade Exhibition

Further up the road at the International Industrial Trade Exhibition, the theme was "Africa – Partner in Progress" and all the Festival films were continuously being shown to the exhibition visitors, including representatives from 32 independent African countries as well as the German and foreign tourist and trade visitors. These shows continued until mid-October in the Marshall House, another U.S. contribution to Berlin.

Opened by Fritz Berg, President of the German Federation of Industries, who presented a documentary film describing the Berlin situation, the Film Festival itself reflected the growth of international partnership. Seven films dealt with the ways in which countries help each other, with their sponsor names following each title. They were:

1. *Campo Limpo* (Krupp), on cooperation between Germany/Brazil.
2. *Es Liegt in Unserer Hand* (Volkswagen), Germany/Brazil/Australia and Africa.
3. *Partnerschaft* (Siemens), dealing with Germany and India.
4. *Antonio* (Krupp), on German construction in Brazil.
5. *The Peaceful Revolution* (A.E.I.), Britain and India at work.

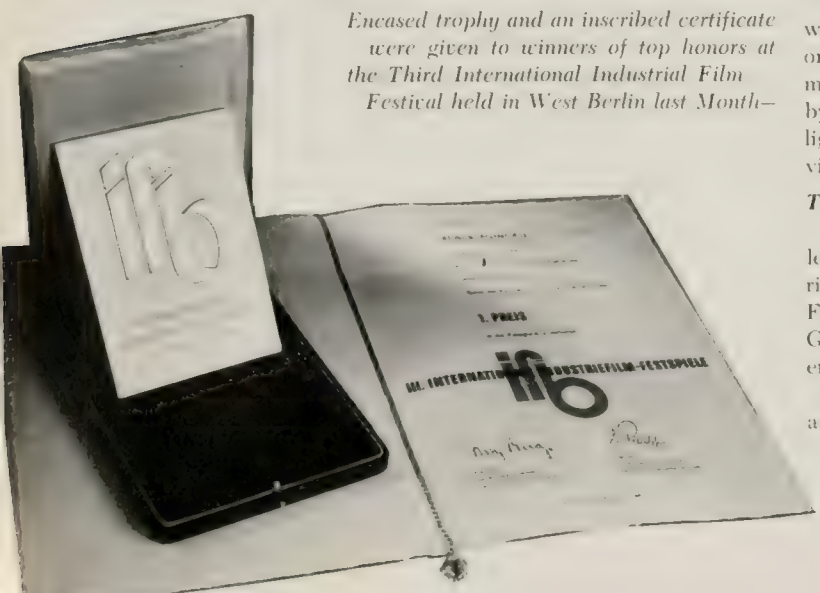
Below: Mayor Willy Brandt of Berlin welcomed the delegates to the Festival with an inspiring address that was symbolic of the beleaguered city's spirit.

THIRD INTERNATIONAL FILM FESTIVAL:

6. *Usutu* (Courtaulds), on cooperation of Britain and Africa.

7. *Operazione Orinoco* (Innocenti), Italy at work in Venezuela.

Each member of the jury, under the chairmanship of Will Riesenberg of the German Confederation of Employers, was selected by the competing nations. They included M. Houlot of the Belgian Productivity Council; Dr. Packenius of BASF Germany, sponsor of the splendid *Spiel in Farben*, an award-winning film; Dr. Hans Schaller of A.E.G. whose report of the Festival in German is given on Page 53. Another German jury member was Hans Sauer of Siemens, which sponsored *Partnerschaft*.



From the Netherlands came Kerst Blauw, BUSINESS SCREEN special correspondent and the representative of the Dutch Employer's Federation; Britain sent Gordon Begg of I.C.I., the sponsor and producer of Britain's only award-winning film, the in-plant safety film, *Black Monday*.

Dr. Heinz Stauffenberger and Friedrich Wanek came from Austria — next year's site of the German-language industrial film festival at Salzburg. Sven Hallonsten, director of the Office of Personnel Administration in Stockholm, represented Sweden; Sven plans to show the winning films in Stockholm and other centers next January.

Dr. Meyer of the Swiss Federations of Industries represented Switzerland which won an award for the first time with CIBA's *Dein Herz ist Kostbar* describing the fight against heart disease. Spain, which has offered to be the host nation for next year's Festival (in Madrid in October, 1963) sent Tomas Covian and Manuel Mur representing the Trade Union movement and film production.

The United States' representation was by Dr. Robert Gessner, Professor of Cinematography at New York University, who was being exposed to industrial films for the first time, and by Gerhard Stir the Berlin representative of N.B.C.

Encased trophy and an inscribed certificate were given to winners of top honors at the Third International Industrial Film Festival held in West Berlin last Month—

Festival Committee Included These Prominent Industrialists

The Festival Committee under the Chairmanship of Dr. Hu Ritter of the German Federation of Industry (B.D.I.) was compo of Dr. Hermann Goez of the B.D.I. office in Berlin; Georg Backmeis of the Cologne office; Dr. Klaus Brepohl, director of the German dustrial Institute and a BUSINESS SCREEN special correspondent; H Campen of Krupps in Essen; Heinz Esser, in charge of the a-v partment of Mannesmann in Dusseldorf; Dr. Gerhard Friehe of Berlin Exhibitions Office; Dr. Gunther Hoffman of the Berlin Sen Chamber of Commerce liaison office; Peter Nickel of Demag, D berg; Dr. Gerhard Scharnhorst, the Bayer films manager; Dagob Schlesinger; Dr. Heinz Siewert of Telefunken and Josef Simons the Employers' Confederation — men whose experience in indust administration contributed to a smoothly running program of so and business events.

Hosts at the reception on the opening night were the members the Industrial Film section of the German Federation of Film P ducers under the direction of Hans Friedenwald. The Federation p sented all guests with a guide to sponsorship which includes det of the cost structure and actual costs of German produced film

On the second night, Zeiss Ikon were hosts at the Exhibition wh we saw a nine-screen presentation of the African Partnership sh one of the most impressive exhibition a-v presentations seen in G many. The nine automatic Xenon slide projectors were all contro by the sound track of the commentary tape which also controlled t lighting plot of the 45′ wide map of Africa containing 17,000 i vidual lamps.

Two Formal Discussion Sessions on the Festival Program

During the Festival there were two discussion sessions; the f led by the Institut fur Film und Bild in Wissenschaft und Ur richt (Educational A-V Foundation) was under the chairmanshi Fridolin Schmid, the Foundation Director. Among the speakers George Buckland-Smith, the producer of three of the British f entered.

It was agreed that a list of the subjects for which educational f are most required should be prepared and submitted to the nat

THESE 21 FILMS WON HONORS AT BERLIN

Category A: Films from industry on matters of general, industrial, economic or social interest and intended for showing primarily to the general public.

t Award: Alpha, Beta, Gamma (France), 20 minutes, 35mm color. **Theme:** o-activity is a reality with little cause for fright or propaganda. **Sponsor:** ımissariat a l'Energie Atomique. **Producer:** Son et Lumiere.

ond Award: Dein Herz ist Kostbar (Switzerland), 11½ minutes, color. **Theme:** fight against heart disease. **Sponsor:** CIBA, Basel. **Producer:** Filmproduktion H. Zickendraht.

d Award: Heures Champenoises (France), 25 minutes, 35mm color. **Theme:** manufactuer of champagne. **Sponsor:** Comite Interprofessionel du vin de mpagne. **Producer:** Societe Nouvelle Pathe Cinema.

Category B: Informational films about specific industrial products, materials or projects, intended for showing to the general public (excluding "commercials").

Award: Operazione Orinoco (Italy), 55 minutes, 35mm color. **Theme:** struction of a foundry in Venezuela. **Sponsor and producer:** Soc. Innocentiustria Meccanica e Metallurgica.

ond Award: Moltopren (Germany), 17 minutes, 35mm color. **Theme:** the n, manufacture and properties of the fully synthetic Bayerfoam, Moltopren. **nsor:** Farbenfabriken Bayer AG. **Producer:** Bayer-Filmstelle.

d Award: Feu et Flamme (France), 10 minutes, 35mm color. **Theme:** the ufacture of matches. **Sponsor:** SEITA (Service d'Exploitation Industrielle Tabacs et des Allumettes). **Producer:** Publi-Techni Films.

Category C: Industrial films aiming less at information than at prestige and intended for the general public.

Award: L'Isola del Vetro (Italy), 15 minutes, 35mm color. **Theme:** develop-t of the glass industry of Murano over the centuries. **Sponsor:** Azienda noma Soggiorno e Turismo, Camera di Commercio, Associazione Industriali, ciazione Nazionale Industriali del Vetro. **Producers:** Alberto Ancilotto e lando Armati.

nd Award: L'Ultimo Acquaiuolo (Italy), 15 minutes, 35mm color. **Theme:** water seller gives way to modern water supply made possible by dams. **nsor:** Soc. Italiana Concotte d'Acqua. **Producer:** Unieuropa Film.

d Award: Spiel in Farben (Germany), 27 minutes, 35mm color. **Theme:** stry has created a world of color, given glamour to our lives. **Sponsor:** sche Anilin & Soda-Fabrik AG (BASF). **Producer:** Gessellschaft fur bildende le.

Category D: Industrial technique films intended primarily for use by specialized audiences.

Award: N. 6 M 401 (Italy), 35 minutes, 35mm color. **Theme:** the constructing working methods of an automated calculating machine. **Sponsor:** Societa tti.

nd Award: Grosstohre von Mannesman-Hoesch (Germany), 10 minutes, 35mm color. **Theme:** the manufacture of large tubes. **Sponsor and producer:** Filmproduktions-gemeinschaft Mannesman.

Third Award: Fast . . . for the Big Jets (Sweden), 13 minutes, 35mm. **Sponsor:** Suecia fur Skanska Cement.

Category E: Films on marketing and sales techniques, commercial practice, etc. intended primarily for showings to specialized audiences.

First Award: Remington Eleven (United States), 16 minutes, 16mm color. **Theme:** visuals and background sound interpret the simplicity and other features of Remington typewriters for international use. **Sponsor:** Remington Rand International. **Producer:** Vision Associates.

Second Award: Strangers in Paradise (United States), 23 minutes, 16mm, b&w. **Theme:** to indoctrinate airline personnel on meeting the unpredictible needs of all kinds of travelers, through courtesy and understanding **Sponsor:** Pan American World Airways. **Producer:** Henry Strauss & Company.

Third Award: Les trefles s'organisent (France), 16 minutes, 35mm color. **Theme:** background on administration, modernization within small commercial enterprises. **Sponsor:** Association Francaise pour l'accroissement de la productivite. **Producer:** Objetifs.

Category F: Films on scientific principles and research; their applications in industry. Shown primarily to specialized audiences rather than public.

First Award: Adhasion (Germany), 35 minutes, 35mm color. **Theme:** the power of adhesion as a force for creativity. **Sponsor:** Farbwerke Hoechst AG. **Producer:** Gesselschaft fur bildende Filme.

Second Award: Entspanntes Wasser (Germany), 12 minutes, 16mm color. **Theme:** the phenomenon of surface tensions in liquids, primarily water. **Sponsor:** Henkel & Cie. G.m.b.H. **Producer:** Roto-Film G.m.b.H.

Third Award: Introduction to the Two-Stroke Marine Diesel Engine (Denmark), 34 minutes, 35mm color. **Theme:** the theory and practice of the two-stroke marine diesel engine. **Sponsor:** Burmeister & Wain Maskinog Skibsbygerri A/S. **Producer:** Minerva-Film A/S.

Category G: Films dealing with the human factor in industry, intended for industrial use rather than general public showing.

First Award: Black Monday (Great Britain), 18 minutes, 35mm, b&w. **Theme:** the "anatomy" of an accident in a research laboratory. **Sponsor:** Imperial Chemical Industries Ltd. **Producer:** The ICI Film Unit.

Second Award: Phantasie and Gestaltung (Germany), 27 minutes, 35mm color. **Theme:** the creative facility of human imagination. **Sponsor:** Bundesanstalt fur Arbeitsvermittlung und Arbeitslosenversicherung. **Producer:** Paul Zils/Duetsche Condor Film G.m.b.H.

Third Award: Securite (France), 17 minutes, 35 minutes, b&w. **Theme:** cause and prevention of accidents in coal mining. **Sponsor:** Houilleres du Bassin du Nord et du Pas-de-Calais. **Producer:** Son et Lumiere.

Grand Prix: awarded to Italy for honors at the Festival.

Berlin Congress Hall, a U.S. contribution to the city in , is "without doubt the finest convention site in Europe."

Festival films were projected in this large auditorium of the Hall. 5,000 people saw the films during the five-day Exhibition.

Studying Form at the Berlin Festival

Our European Editor Reviews the Winning Entries

As a Seasoned Participant in industrial Film Festivals, I was not surprised that the Italian films brought the Grand Prix to Italy.

Italian industrial film production is not large; possibly a hundred or so films are made each year by a small number of sponsors. Italy, as we know, has pulled herself up by the bootstraps to become one of the most rapidly developing industrial nations in the world in spite of the fact that Italian industry not only has to compete in old markets but to break into new markets.

Italy Has Come Along Fast

Italian industry has had the foresight to utilize a-v to the full where a-v is most effective, perhaps because they understood the need for better communication more than those industries which were already in the field. The man who has to hang up his shingle has a tougher time than the old established business, after all.

At Berlin, we old hands were surprised that Italy had only submitted 14 films. It cut her chances of winning by one, we said, for Britain, Germany, France and United States had each submitted the maximum — 15 entries. Eight of Italy's 14 films were submitted in Categories A and B, two in C and one in D. Italy gained first prize in Category B with *Operazione Orinoco*, an in-plant film made by Innocenti, the Milan firm which has built plants and machinery for 24 countries outside Italy. The film is the simple account of the building of a ste mill 6,000 miles away on the ban of the Orinoco river in Venezue

It is intended to show the worl which is Innocenti's market, hc they do *their* job and it did *its* n *job* better than any one of the other films in the category. Su ject, script and production ma up a modest account of a magni cent industrial achievement — a director Mario Damicelli kno how to tell a story.

Where Imagination Counts

In Category C — the categc for the true prestige film — pi ducers have the opportunity to e periment and to give full rein their imagination; sometimes th are successful in their attempts serve industry really well by a pealing perhaps more to the a diences' hearts than heads; son times it is possible to comb head and heart in films which a not avant-garde but which ma maximum use of picture a sound.

The premier award winner, *Isola del Vetro (The Island Glass)*, tells the story of Murab glass, how the art of its mak and design has developed throu the ages and how today Mura maintains its reputation as a "c lector's piece" and is at the sa time used as an integral part good modern architecture. Albe Ancillotto and Fernando Arm the producers, make this clear us, just with pictures and musi that's all. The film was sponso by the Venice Tourist Office, Chamber of Commerce and Venice Glass Manufacturers As

Germany's "Phantasie und Gestaltung" gave emphasis to creativ

Italy's "Orinoco" (Innocenti) won Festival prize for that country.

ciation of the winning land.

The second prizewinner, Italy's only other entry in the category, was *L'Ultimo Acquiuolo* (*The Last of the Water-Carriers*), made by Unieuropa Film for the Societe Italiana Condotte d'Acqua of Rome. The film makes a striking comparison between the water-carrier plying his centuries old trade and the modern supply systems, as he quenches the thirst of the men building the Pertusillo dam. Dore Modesti impresses but does not overwhelm with his charming little film designed for Italy's cinemas.

The Meaning of Color

The other award winner in the category, BASF's *Spiel in Farben*, is a highly imaginative romp through color and what it means to us and contains more good visual ideas than you'd normally find in a dozen films. Made by Gesellschaft fur Bildende, the Munich studio which produced *The Magic Tape* and *Portrait of a Metal*, prizewinners in previous Festivals, this film is also destined for box office audiences who will gladly *pay* to see it.

Italy won the premier award in Category D as well with *N 6 M.-401*, another in-plant production. This film, jointly produced by Olivetti and the Italian Confederation of Industries, is the answer for anyone who thinks that a technical film must be dull. It describes the way in which the computer controls the action of automatic machinery in a factory. The description is technical but the interest is universal.

Germany was almost neck and neck with Italy and actually won more awards, but only one premier award. This was the winner in Category F, *Adhaesion*, also made by Gesellschaft fur Bilbende Films, this time for Farbwerke Hoechst. It is a brilliant teaching film on *why* and *how* things stick to each other.

The second award winner in

THIRD INTERNATIONAL FILM FESTIVAL

this category was also German, *Entspanntes Wasser*, made by Roto-Film of Hamburg for Henkel & Cie of Dusseldorf. This fine piece of a-v instruction deals with surface tension in water. The third prizewinner in the category, *Introduction to the two-stroke Marine Diesel Engine*, was the Danish film produced by Minerva-Film for Burmeister & Wain of Copenhagen. It is intended for engineers and engineering students and explains the functions of the diesel engine and will be a valuable acquisition for technical schools.

Honor French Atom Film

France also gained a premier award: *Alpha, Beta, Gamma*, produced by Pierre Long of Son et Lumiere for the French Atomic Energy Authority. This film has the serious purpose of explaining to the French people the realities of radio-activity, slashing through superstition and misinformation. It

Kerst Blaauw, Netherlands Confederation of Employers, was on the Festival Committee.

is an uncomplicated convincing film, ideal for its purpose.

The third prizewinner in the category also went to France, for *Heures Champenoises*, a tour of a champagne-manufacturing plant, made for the Joint Champagne Wine Industry Committee by Nouvelle Pathe- Cinema. This film is intended for theatrical release and offers proof that the old formulae are often the best.

The Swiss second prizewinner in Category A, *Your Heart is Valuable*, made by Dr. H. Zickendraht of Zurich for CIBA Pharmaceuticals, deals with the difficult subject of the fight against heart disease. This is a medical film

J. P. J. Kempen (l) of the Dutch embassy in Germany; and Friedrich Wanek, Austria.

made for lay people and it is impressive.

U.S. Best in Sales Field

In the Sales Technique category E, the United States swept the board with the premier award winner, *Remington Eleven*, produced by Vision Associates, a brilliant sales film without words, intended to appeal to foreign audiences. And it did. The second prize in this category went to *Strangers in Paradise*, Henry Strauss' film for Pan American, part of the highly effective, well-visualized Pan Am sales training program.

Britain, which won nine awards in the Second International Industrial Film Festival in Turin last year, gained only one award in Berlin with *Black Monday*, an in-plant accident prevention film produced by Gordon Begg for his firm Imperial Chemical Industries Ltd. of London.

Black Monday, scripted by James Hill, who produced the British Oscar-winning film *Giuseppina*, is an exciting and impressive story of an accident in a research laboratory. It is designed for research scientists and is one of the few safety films made which is aimed at this audience.

Below: conferees at table (l to r), R. Haulot of the Belgian Productivity Council; Gordon Begg, Imperial Chemical Industries Ltd., Britain; and Hans Sauer of Siemens AG, Germany.

Pictures Creativity of Young

Category C covers a wide range of subjects and the second prizewinner, *Phantasie und Gestaltung*, made by Condor Films for the German Federal Bureau for Labor and Unemployment Insurance deals with the creative ability of children — a long way from industrial accidents!

The International Industrial Film Festivals are still evolving; they are the expression of a form of communication which is still experimental and with each Festival we learn a little more, improve our technique of judging films and assessing their qualities in relation to the job they set out to do.

Dr. Hugo Ritter, Chairman of the Film Festival Committee.

But do we know what jobs many of the entries were intended to perform? The organizers made it comparatively easy to discover who the films were intended *for*, but in far too many cases the sponsors who submitted the films omitted to tell us *why* they had made them and particularly in categories A, B, and C there was considerable confusion as to the suitability of films in their categories. It would be advisable to take

Will Riesenberg was chairm of the 25-man Festival film ju

a leaf out of the Italians' book a enter fewer films, *but to ensu that they were right for their ca gories.*

Why the Winners Succeeded

The Italians, French and G mans all selected their fil through exhibition at natio film festivals. The publicity cussed on this form of selecti and the reconsideration whi may follow open discussion, in opinion, help to ensure an en with a better award potential th films selected in committee, as the case of Britain and the U.S.

In future Festivals, the sponso may be encouraged to state t reasons *why* they made the p ticular films, *in detail*, so that ries can have something to go

Below: closed-circuit televisi sets permitted visitors, delegat to view the Festival ever in Berlin Congress Hall aisl

when they try to judge effectiveness. Sponsors who do not give this information handicap themselves seriously. There were several cases of excellent films being passed over because the judges were unaware of their true purpose.

The films that won deserved to win but they might have had a tougher fight. Maybe they will, next year!

Delegates to the Festival pause for a chat during an interval between film showings.

Leading industrialists of West Germany were among those who viewed pictures at Festival.

III. INTERNATIONALE INDUSTRIEFILM FESTSPIELE
III. INTERNATIONAL INDUSTRIAL FILM FESTIVAL
III. FESTIVAL INTERNATIONAL DU FILM INDUSTRIEL

ein Meilenstein fur den Industriefilm

☆ Mit der Verleihung des vom Rat der europäischen Industrieverbände gestifteten "Grand Prix" an Italien wurden die diesjahrigen III Internationalen Industriefilm-Festspiele in Berlin beendet. Funf Tag lang, nämlich vom 23. bis 28. September zeigten 14 Nationen in der Kongresshalle 125 Filme. Die grossen Industrielander der freien Welt, wie Frankreich, England, USA, Italien und Deutschland waren mit dem höchstzulässigen Kontingent von 15 Filmen vertreten. Zahlreiche andere europäische Länder und Australien stellen die restliche Quote.

Eine internationale Jury verlieh je drei Preise an die besten Filme der sieben Kategorien. Viele deutsche Teilnehmer aus Kreisen der Industrie, der Filmproduzenten und der verschiedenen Verleihorganisationen und zahlreiche Besucher aus dem Ausland verliehen der Veranstalltung hohes Niveau, das durch die Anwesenheit des Regierenden Bürgermeisters von Berlin, Willy Brandt, anlässlich der Schlussfeier eine besondere Note erhielt. Der Präsident des Bundesverbandes der Deutschen Industrie, Fritz Berg und der Berliner Senator für Wirtschaft, Professor Dr. Schiller, hatten die Veranstaltung eröffnet.

Der Präsident des 2. deutschen mitveranstaltenden Verbandes. Dr. Paulssen von der Bundesvereinigung der Deutschen Arbeitgeberverbände, schloss mit der Preisverteilung diesen interessanten Wettbewerb.

Bei 125 fur Berlin gemeldeten Filmen und nur 21 Preisen konnte nicht jeder Film ausgezeichnet werden. Auch in Berlin lagen viele Filme an der obersten Grenze der Beurteilung and es entschied oft nur ein knapper Punktvorsprung. Um so erfreulicher ist die Tatsache, dass die grossen Industrieländer, nämlich USA, Frankreich, England und Deutschland je einen ersten Preis und Italien, als Gewinner des "Grand Prix," drei erste Preise errangen. Aber auch die anderen Industriefilmländer haben keinen Grund zur Klage: ihre Produktion steht keineswegs im Schatten der grossen Industrieländer. Die Wirtschaftsstruktur eines Landes bestimmen das Thema und den technischen Wert der Industriefilme, die freizügige, sparsame oder sogar geizige Verwendung von künstlerischen Stilelementen beeinflussen die optisch-akustische Gestaltung. Ein Industriefilm, der diese Synthese nicht verwirklicht, wird sich nur schwer durchsetzen.

Rouen im Jahre 1959 und fast auch noch Turin im Jahre 1961 waren Anfangsstationen für den deutschen Industriefilm im internationalen Konzert, Berlin 1961 war Zwischenstation, sagen wir besser **Umsteiger.**

Der deutsche Repräsentations-film hat in Berlin nicht sehr viele Lorbeeren geerntet, **Kahl** (AEG), bester deutscher Industriefilm 1961, mit vielen anderen Auszeichnungen und dem "Oscar" nahe, fand keine Gnade, **Spiel in Farban** (BASF), erreichte gerade noch den letzten Platz in der Gruppe C und der Mannesmann-Film **Alvorada,** auf den man grosse Hoffnungen gesetzt hatte, wagte sich nicht an die Öffentlichkeit. **Campo Limpo** und **Antonio** (Krupp) setzten sich nicht durch, **Partnerschaft** (Siemens und **Es liegt in unsere Hand** (VW) blieben gleichermassen auf der Strecke. Trotzdem haben diese Filme ihren Weg schon gemacht. Wenn nicht, werden sie ihn noch machen.

Dennoch ist der deutsche Erfolg in Berlin beachtlich. Mit nur einem Punkt in der Gesamtwertung weniger liegt Deutschland knapp hinter den Italienern. Von 15 Filmen haben immerhin 6 einen Preis errungen, und in der Gruppe Forschung und Entwicklung, liegen mit **Adhäsion** (Hoechst) und **Entspanntes Wasser** (Henkel) gleich zwei deutsche Filme in Front.

Wohin wird der deutsche Industriefilm führen. Viele Experten sind sich darin einig, dass es zwar mancherlei Wege in die Zukunft gibt, dass aber auch hier in der Beschränkung die Weisheit liegt. Filme, die sich mit Problemen der Entwicklungshilfe befassen, werden weiterhin hoch im Kurs stehen, denn die Aufgaben der Entwicklungshilfe werden uns noch auf Jahre hinaus beschäftigen.

Die technische Information wird sich stärker durchsetzen und das Gesicht der zukünftigen Filme bestimmen. Wenn es nicht zu viel Mühe machte, sollte man ein Verzeichnis der Bildeinstellungen bringen, die heute abgegriffen und unerträglich geworden sind. Man sollte sich mit der Frage der Verwendung von Musik, und besonders elektronischer, ernsthaft auseinandersetzen.

Der Kommentar ist schon erstaunlich locker geworden, hier ist der Fortschritt unverkennbar. Trotzdem ist es verwunderlich, wieviele der ausländischen Filme noch "zugeredet" sind. Dabei kommt das Auge oft zu kurz.

Hauptanliegen der Industrie ist und bleibt der Verleih. Von seiner Funktion auf den verschiedensten Ebenen hängt auch die Zukunft des Industriefilms ab. Man muss die Gewissheit haben, dass man nicht um einer Eitelkeit willen Investitionen für einen Industriefilm unternimmt, sondern dass der Film vor allem eine Aufgabe erfüllen muss: man muss ihn sehen.

— *and grace a brilliant necklace!*

Linde Stars Are a Girl's Best Friend

Retail Jewelers Are Showing This Fascinating Picture Story of Synthetic Gems

SPONSOR: Linde Stars (Union Carbide Company).

TITLE: *Method for Miracles,* 15 min, color, produced by Fred Niles Communications Centers.

☆ Exquisite jewels, brilliant and colorful, are literally "grown" in oxy-hydrogen furnaces at a temperature of 3,700 degrees Fahrenheit while viewers watch in fascinated awe at the scene in *Method for Miracles.*

This new color motion picture of the well-known "Linde Stars" was unveiled some weeks past at the Retail Jewelers of America Show. Jewelers and press attended showings in the theater of the Union Carbide building in Manhattan, just a block away from the RJA convention hotel. Now audiences will see it nationally via public service television screenings.

The Role of Synthesis in Our Culture

Theme of this second Linde film in recent years is "synthesis" and that basic idea is echoed widely through modern civilization and culture. Stones grown by man, but having the same optical, physical and chemical properties as natural gems, are called synthetic. Imitation or simulated stones, by contrast, are usually made of glass or plastic.

After defining "synthetic" the film shows that cultures of peoples grow and develop as they follow this thesis through religion, history, beauty and chemistry. With excellent color fidelity, the picture shows how Linde Stars are cut, polished and used in fine jewelry settings, often in combination with diamonds and other rare gems.

16 Million Have Seen "Gift of Kings"

Linde's earlier film, *The Gift of Kings,* has been seen to date by more than 16 million viewers. Color prints of *Method for Miracles* are being offered without charge to retail jewelers who wish to book the picture or to use it in combination with *The Gift of Kings* for a full 30-minute program. These local jeweler showings are being widely made to service clubs and other civic groups.

Gordon Weiseborn directed for the Fred A. Niles Communications Centers and the script was written by Rolf Forsberg.

The Farm Journal: Image of Rural America

A Fine Pictorial Reel Brings Farm Life and People to the Advertising Buyer

SPONSOR: The Farm Journal.

TITLE: *The Nature of Things,* 15 min, color, produced by Elektra Studios.

☆ FARM JOURNAL is the grand champion of the 320 agricultural publications. It is first in circulation (over three million) and first in advertising revenue. It has a good claim to its own billing of "first in the hearts of countrymen . . . and women."

Farm Journal gets advertising consideration, if not actual business, from almost all manufacturers of farm machinery, seedsmen, and producers of other specific agricultural materials. Half of the magazine's revenue comes from this source. But the other half comes from general product advertising, and in this field Farm Journal competes most actively with what it calls "urban-oriented" media—Life, Ladies Home Journal, NBC, etc.

Media Men Need to Know Farm Audience

Orrin Spellman, vice-president, advertising and sales, of Farm Journal, has felt that most people who make media selections usually do not have much identification with farm audiences.

Too often, the media buyer's picture of a farmer is an overalled hayseed leaning on a fence, with a Chic Sale out in back. But today's farmer is actually more likely to have wall-to-wall carpeting, television, and more modern appliances than his urban counterpart.

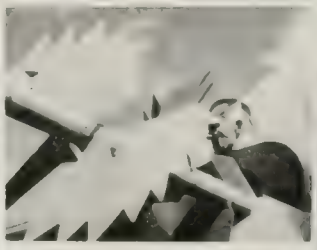
While Farm Journal's statisticians are as adept as the next publication's at pointing out such tangibles as the number of cars a typical farm family has, the family income, buying power and other pertinent data, Orrin Spellman knows that the advertiser doesn't look to communicate with a man's possessions but with his mind.

Getting to the "Heart" of This Market

To explain the close relationships between Farm Journal and its readers—to show the difference in attitude of farm people toward life in general, Mr. Spellman decided that a motion picture which could deal in emotion and momentarily bring the advertising buyer close to farm life would be a most useful supplement to his factual demonstrations.

In talking to some 24 producers before a contract for the film was signed, most of them urged Orrin Spellman to use a factual documentary technique—an overview of agriculture in America, or a day in the life of a "typical" farmer. But the film, *The Nature of Things* as finally produced (by Elektra Studios, New York) is more of an entertainment than a documentary. It shows, by especially fine photography, and a moving original musical score, something of the intangible values of farm life that we urbans may not have understood so well before. And, of course, it relates these values to farm readers and to the Farm Journal.

Film Had to be *Creative,* Professional



Orrin Spellman said that he was concerned that the film must match the high sense of professionalism that characterizes most advertising people. He thinks that it might be possible to "get by" with a lesser film for other audiences not as sharp to spot techniques not up to snuff, but advertisers, he believes, want to do business with media that demonstrate that they are creative and thoroughly professional in presenting their stories.

The Nature of Things is all professional and highly creative. It has won several film awards during the past six months since its release, and it has won better accolades from such astute judges as Tom Maschler, Kenyon & Eckhardt vice-president, who said, "This is the best media presentation I have ever seen."

Proper Showings Get Deserved Attention

Farm Journal figures it has 9,000 prospects, 4,500 of them have seen the film thus far, and the showings are still going on continually. Orrin Spellman believes that "distribution" is at least half the battle in media presentation. Half his budget goes for setting up audiences of advertising buyers and seeing that the interest is appreciated and justified. Clever imaginative invitations are used to lure the audience to gatherings—usually lunches—and Mr. Spellman insures a good show by insisting

These scenes are from "The Nature of Things"

hat outside professional projectionists be used for every performance. All branch sales offices are equipped with prints of the film.

Credits for *The Nature of Things*, 15 minutes in running time, in color, go to Elektra's Abe Liss, creative director; Bob Yung, producer; Paul Harvey, director; and Phil Lewis and Larry Ravitz, writers.

Family Circle Magazine Presents —

A Portrait of Retailing in "The Good Ol' Days

SPONSOR: FAMILY CIRCLE Magazine for National Association of Food Chains

TITLE: *The Good Ol' Days*, 15 min, color, produced by Dynamic Films, Inc.

☆ This is a film about supermarkets, a modern invention. (Actually they got started in about 1916 when an enterprising grocer in Memphis installed self-service in his store. His customers liked it right away because he was able to cut down on the cost of clerks and so on the prices he had to charge his customers.) From the day it started it was a success; from 1916 until today, like Topsy, it just grew. Today, some 90% of all retail grocery operation is self-service.

But in *The Good Ol' Days*, those were the days of "specialty stores." First mother went into the dairy story to get her milk. Well, the man dippered it out for mother — into a pail. First he brushed away the flies, opened the can, dippered it out, put back the top, and let the flies settle down where they'd been before.

You Got What the Stores Had on Hand

Shopping finished there, mother went on to the butcher, the baker, the grocer, and the selection of whatever they had for sale. Sometimes, but rarely, the grocer also sold vegetables — that is, when he had them. Corn you got in the fall, and only in the fall, and onions and lettuce only in the spring, and tomatoes — well, everyone knew *they* were poisonous.

No, *The Good Ol' Days* in the grocery stores left a lot to be desired. Not like now. There are no seasons any more. You want strawberries in December, corn in February, berries in May? Help yourself. You a stickler on potatoes. Here are Maines, Idahoes, Long Islands. Apples from everywhere, and processed foods like tomato juice in cans, in glass containers, frozen, blended, spiced, all shapes and sizes. Take your pick.

Supermarkets Are Sharply Competitive

"Yeah, but supermarkets are so big, don't they squeeze out the little man?" Today's housewife knows the answer to that. If she doesn't like the look of one, or the prices in another, all she has to do is walk across the street. For every supermarket is in competition with every other — and with the credit and delivery store down the block, too.

Today's housewife has greater choice than her mother ever had. As a matter of fact, the only monopoly that ever existed in food was

(CONCLUDED ON PAGE ONE HUNDRED NINETEEN)

A Great Film Continues Fight on Cancer

The American Cancer Society Sponsors a New Version of "Breast Self-Examination"

SPONSOR: American Cancer Society.

TITLE: *Breast Self-Examination*, color, produced by Audio Productions, Inc.

☆ *Breast Self-Examination*, a motion picture that has been in wide and constant use for the past twelve years, is considered to be the most important medical film for lay use ever made. Three thousand prints of the cancer-prevention picture have been made, and some eight million women are estimated to have seen it. The lives of literally hundreds of women have been saved because they adopted the techniques of self-examination taught in the film.

Despite this very wide usage and the universal acceptance of the twelve-year old film by everyone connected with breast cancer detection and prevention, the urgency of reaching the 64,000 women who annually develop this form of cancer has prompted the American Cancer Society, sponsor of the film, to release a new version of the same film,

Audio producer-director Alexander Gansell (center) checks action for scene in the new version of American Cancer Society picture.

which teaches exactly the same examination techniques, but does it in an improved way, using somewhat better pedagogical methods and the much better motion picture materials that are now available.

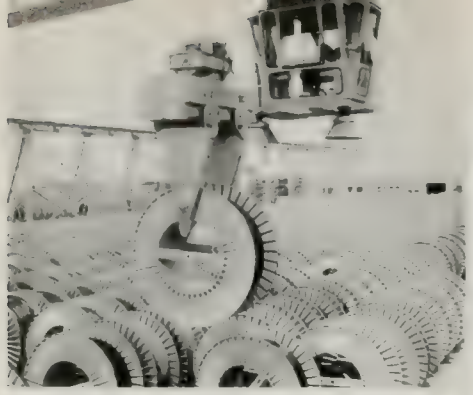
Eighth Cancer Film Created by Audio

The new version of *Breast Self-Examination* is the eighth in a series of motion pictures that have been made for the American Cancer Society by Audio Productions, Inc., New York. The Audio team which produced the new version of *B S-E* is the same one that made the original film twelve years ago — Alexander Gansell, producer-director; Earl Peirce, writer; Peter Glushanok, cameraman; and Murray Margolin, editor.

Breast Self-Examination urges women to examine their own breasts once a month after menses. The technique of palpation is described and demonstrated by Dr. Emerson Day, Director of the Strang Prevention Clinic, Memorial Center, New York. As the actual technique of examination is most important to put across, the film covers the correct methods four times: Dr. Day describes why

Dr. Emerson Day tells woman patient how she can help protect herself against cancer.

self-examination is important to a woman's peace of mind and how the breasts should be examined; he then demonstrates the technique, supervises the patient in her own examination, and the audience then sees the patient perform it once more at home.



In addition to teaching the proper methods of self-examination, the film provides a great deal of motivation in that the patient comes to the doctor in the film because she has discovered a "lump" and believes it to be inevitably a cancerous growth. The doctor, on examination, assures her that the "lump" is a normal ridge formed where the breast folds over upon itself in a standing position. He also tells her that actually most masses that may form in the breast are *not* malignant. By regular self-examination, changes in the tissue may be discovered early and investigated by a doctor.

The film, itself, is a first-class production — with better color and better definition than the much-heralded first version. It is presented with such good taste as to be entirely acceptable to all women's audiences.

Prints Available from Local Chapters

The American Cancer Society distributes the film through its local chapters. Prints are sold at print-cost. On the local level, the ACS has many devoted workers in close contact with cancer prevention problems. They are often able to arrange showings before women's clubs, P-T A groups, schools and colleges, to women's groups in industry, or at special showings on Saturday mornings in local movie theatres to general audiences of women. Local physicians are invited to attend these events.

Breast Self-Examination sums up its case in the words of Dr. Emerson Day, who appears in the film: "Hundreds of thousands of women — perhaps millions of women — have learned this simple health habit. For those who found breast cancer, it has helped to save their lives. But for the vast majority who have not and will not find cancer, breast self-examination has brought peace of mind — to which every one of you is entitled. Make it a habit — for life."

Vivid color photography, accented by its original music, tells the complex story of telephone cable-making in "Wire for Sound."

A Bell System Trilogy of Science Films

Informative Series Includes "Krystallos," "Time Machine" and "Wire for Sound"

★ *Wire for Sound*, the Bell System's new short science film, was widely hailed by knowing cinema connoisseurs months before its recent release. Industrial Audio-Visual Association members cheered it at their spring meeting this year. It was chosen by CINE (the Committee on International Non-Theatrical Events) to represent the United States at the Venice Film Festival in the industrial category.

A National Association of Manufacturers committee selected *Wire for Sound* as one of 15 films entered in the 3rd International Industrial

Experimental growth of crystals in the lab is pictured in this scene from "Krystallos."

Film Festival at Berlin. It received four "Citations for Specific Excellence" from the selection committee of the Second Annual Boston International Film Festival, and it is racking up even more awards from other current competitions. By all odds, this is one of the outstanding films of the year.

Three Films Are Released as a Package

Wire for Sound, produced by Owen Murphy Productions, is one of three new popular science films released this fall as a package by the American Telephone & Telegraph Company for the Bell System Companies. Two others are *Krystallos*, also made by Owen Murphy, and *TASI, the Time Machine*, a cartoon picture produced by Chuck Couch Associates.

The series grew from the Bell System Companies' feeling that they were not using the public information potential of their many scientific advances. Though each film is important in itself, it was felt that the three in a package with contrasting styles would find many uses and achieve a considerable amount of general audience appeal.

Story of Telephone Cable Manufacture

Wire for Sound tells the colorful and complex story of the manufacture of telephone cable - all in ten minutes. And it tells it clearly with almost no words of narration or explanation. Vivid color photography, accented by a rhythmic original musical score, does the whole job.

Starting from the moment that pure molten copper for the cable's wire pours from a ladle, the film carries forward the process from ingot to rod and to finely drawn wires which are insulated and spun together to form cable. Some of the most massive machinery in manufacturing is needed to produce wire only a little thicker than a hair. And wire speeds through it at a pace of nearly a mile a minute.

The Greeks Called It "Frozen Water"

Krystallos, the name applied to quartz by the Greeks of ancient times who thought the substance to be permanently frozen water, is

These controls (in "Krystallos") guide the apparatus for "cooking" man-made crystals.

the title of the second Bell System short science films. The 11-minute color motion picture explains that without it many aspects of modern long distance telephone service, radio and television would still be dreams.

The struggle of Bell System scientific and manufacturing people to find a way to provide quartz crystals that are better - and more economical - than natural quartz makes for a fine story. So does the tale of their success which involves literally growing large, clear quartz crystals from tiny "seeds" of quartz.

"Making Time" for More Overseas Calls

TASI, the Time Machine introduces an eccentric animated character named "Unk" who loves to build fantastic machines. His latest is a time machine. He is aghast when he learns from his nephew, "Dialer," at Bell Telephone Laboratories that the Bell people have already invented one.

He prods his nephew for more information. With the aid of clever animation, "Dialer" tells him all about TASI — Time Assignment Speech Interpolation. He explains how the

"Unk's" time machine has a counterpart in Bell's "TASI" which doubles cable capacity

tremendous growth of overseas calling created a need for more efficient use of the existing undersea telephone cables.

Bell scientists came up with TASI, which doubles the capacity of the cables now in use to carry overseas calls. It does this by taking advantage of the pauses and gaps of time which mark everyone's speech. It interlaces bits and pieces of many conversations to fill in the gaps in each and then unscrambles them at the end, so that the talkers hear only their individual conversations.

Close-Ups Make It a Memorable Film

Wire for Sound and *Krystallos* were directed by Paul Cohen, photographed by Michael Livesey and edited by Eric Lawrence.

They achieve a different effect from most mundane expositions of science subjects by looking very close - almost bug-eyed - into the action. Important objects pictured stand out in icy brilliance on the screen, and are enhanced by unsharp, almost spooky, backgrounds of painted light.

Cohen and Livesey worked over each of these sequences for dozens of hours at a time to achieve the effects they wanted. Gene Forrell's original music score provides exciting accents to the action on the screen.

Columbus Holds 10th Annual Film Festival

Chris Statuettes Awarded to 17 Producers and Sponsors of Top Pictures; 185 Get Certificates of Excellence as Dr. Warren Everote Addresses Banquet

SEVENTEEN PRODUCERS AND SPONSORS of motion pictures and filmstrips, from the United States and abroad, received highest Chris awards at the 10th Annual Columbus (Ohio) Film Festival, concluded in September. The festival is co-sponsored annually by the Film Council of Greater Columbus in association with the Columbus Area Chamber of Commerce.

The Chris statuette, the highest honor given at this traditional civic function, went to 14 motion pictures and three filmstrips produced for business, government, religious and school use. An additional total of 185 Chris certificate awards was generously bestowed on other well-regarded entries judged by local leaders in business, civic, educational, professional and church affairs.

Awards Presented at Annual Banquet

The Chris statuettes and certificate awards were presented to the winners on Friday evening, September 28th, at the annual awards banquet held in the Fort Hayes Hotel. Film Council president Daniel F. Prugh was banquet chairman. Galvy E. Gordon, vice-president; and Mary A. Rupe, secretary-treasurer of the Council, were in charge of arrangements.

Principal speaker at the awards banquet was Dr. Warren Everote, president of Encyclopaedia Britannica Films Inc. His subject for the evening was "Innovators" — those who "bring about constructive change."

Everote Calls for "Educational Juke Box"

The development of an educational "juke box" in which films, video tapes, and other materials would be stored for instantaneous transmission in classrooms and at training centers was envisioned by Dr. Everote.

He also urged the 150 producers and sponsors present at the dinner to "urge, lobby, demand, do whatever is necessary" to see that only quality filmed materials are used in the schools at home and sent abroad.

"As leaders in the world today," he declared, "we Americans are challenged to uphold the finest elements of the leadership that others assume we are capable of supplying. Imagine such contributions for export as an entire medical course on film. In a very real sense, this provides an enormous challenge to us in the communications field, especially we who work with sound film."

Cites Four Main Goals for Producers

Dr. Everote said film producers should strive for four ideals: adherence to authenticity, avoidance of bias, perfection of continuity, and unselfish service to others.

Reporting on a recent world trip, the EBF president said there is a vast need for tailor-made audio-visual materials in Africa. EBF, he revealed, is studying ways to teach English to natives of Liberia and in other African nations and will have a test program in a year.

"These people seek our aid," Dr. Everote concluded. "For another five to 10 years, electricity will remain a problem, so the motion picture projector remains a problem, too. Innovations in the field of equipment could speed progress. With filmstrips they can use battery-operated units. They even have some powered by the sun and others use kerosene lamps or even candles."

Pictured right (l to r) are banquet speaker, Dr. Warren Everote, president of EBF; David Doyle, Bay State Film Productions, Inc. (holding award); and Council president Dan Prugh.

Four honored guests at Industrial A-V Exhibition were (l to r) Robert Colburn, Geo. W. Colburn Laboratory; Eric Morden, film producer; Fred Aufhauser, Vicom, Inc.; engineer Tom Ireland.

Awards to 23 at Industrial A-V Exhibition

Sponsor Herbert Rosen Awards Trophies at Film Festival During His Sixth Annual Lecture Program and Trade Show

THE INSATIABLE HUNGER for awards has brought a new "festival" sponsor to the prize-ring within recent years. The event, billed as the International Film Festival of New York, and held September 25-27, did right well by its participants as 21 handsome trophies were bestowed on producers and sponsors by Herbert Rosen, head of Industrial Exhibitions, Inc., and entrepreneur of this Manhattan fare-thee-well.

The festival program was a highlight of Mr. Rosen's sixth annual Industrial Film and A-V Exhibition, not as well-attended in 1962, but a well-established affair with an interesting "lecture" program and its trade showing of new audio-visual equipment and services.

During the Exhibition program, a group of authoritative men in the field of 8mm Sound participated in a "Progress Report on a New Medium." Panelists included Fred A. Aufhauser, President, Vicom, Inc.; Robert A. Colburn, Vice-President of the George W. Colburn Laboratory, Inc.; Donald Woelfel, Manager, Repeater Projector Division, MPO Videotronics, Inc.; Everett Hall, President, Cine-Magnetics, Inc. and Charles J. Sass, Sales Promotion Manager, Fairchild Camera & Instrument Corp. Raymond G. Hennessy, General Manager, Industrial Products Division of Fairchild was the moderator of this 8mm sound session.

The highlight, however, was the Awards Presentation Luncheon and these were the happy recipients of 1962 honors:

Consuls and Vice-Consuls at Awards Luncheon with (l to r) Festival Director Herbert Rosen. They are: Roy Link (Britain); Mrs. Rosen; Victor von Hoerschlemann (Germany); E. Kopivaara (Finland); Jules Herckens (Belgium); and Yosef Yaskow (Israel).

Reviewing the Winners

RECIPIENTS OF AWARDS at the International Film Festival of New York were announced at a luncheon held at the Barbizon Plaza Hotel, September 26. The awards are made in connection with the Annual Industrial Film and Audio Visual Exhibition.

James Lane (l), Vice-President, Bell & Howell, receives Special Award for industry achievement.

Award winners for 1962 were as follows:

SALES PRESENTATIONS

First Awards

The Egg and You, produced by Hartley Productions for Holiday Magazine.

Special Award

Envelope Jive, produced by Morton Goldsholl for Karolton Envelope Company.

TRAINING FILMS

First Award

Profits in the Bag, produced by Elektra Studios for International Paper Company.

Special Award

What Do You Say?, produced by Video Films for Walker Marketing Corporation.

PUBLIC RELATIONS

First Award

Litho, produced by Elektra Studios for Amalgamated Lithographers of America.

Special Award

Magic Touch of Leather, produced by Gagen Assoc. for Highlander Wool & Hide Company.

SCIENTIFIC FILMS

First Award

From Generation to Generation, Produced by Cullen Associates.

EDUCATIONAL FILMS

First Award

Fury of the Winds, produced by Knickerbocker Productions for Bethlehem Steel Company.

Special Award

The Eye of the Beholder, produced by Elektra Studios for American Newspaper Association.

PUBLIC SERVICE

First Award

Midsummer's Nightmare, produced by VPI Productions for U. S. Public Health Service.

Special Award

To Light Their Way, produced by Lane-Cole-Dietz for United Community Funds.

DOCUMENTARY FILMS

First Award

Wire for Sound, produced by Owen Murphy Productions for American Telephone & Telegraph Co.

Special Award

Life from the Dead Sea, produced and sponsored by the Israel Office of Information.

° ° °

☆ These additional awards were made for technical achievements:

Best: TV Commercial

Brewmaster, produced by VPI Productions for Doyle, Dane, Bernbach and their client — Sick's Breweries — Rainer Beer.

IAVA'S FALL MEETING AT WEST POINT

Industrial Audio-Visual Association Shares Views on Communication Media With Academy Hosts; Member Reports Highlight 3-Day Sessions

THE INDUSTRIAL AUDIO-VISUAL Association's fall meetings are designed primarily to provide a forum for the interchange of information and ideas among the members.

This year, at the Hotel Thayer, West Point, N.Y., October 2-4, the I.A.V.A. group was also able to see how audio-visual activities are carried out at the United States Military Academy, and to exchange experiences with the officers responsible for these activities.

Under program chairman Frank Rollins, E. R. Squibb & Sons, the three-day meeting was swift-paced and full of good solid information. Mr. Rollins' committee included William J. Connelly, Union Carbide Plastics Corp.; Eugene F. Frein, Metropolitan Life Insurance Co.; Alan W. Morrison, Socony Mobil Oil Co.; Daniel Rochford, Standard Oil Co. (NJ); D. G. Treichler, Socony Mobil Oil Co.; and Jack O. Flynn, Union Carbide Corp.

Greeted by General Stilwell

The West Point tradition and appearance could not have been exemplified more surely than by the Commandant of Cadets, Brig. General Richard G. Stilwell, who greeted the 65 members and 14 guests on hand for the opening session on October 2nd. General Stilwell likened the communications arts of today with those of West Point's early days when Baron von Steuben was drilling his men on the plains to defend this vital crossroads of the colonies.

Formerly a technical school for training hard-core professionals, West Point has increasingly stressed liberal arts and pure science until its curriculum is matched by few other colleges. Audio-visual methods are widely used throughout the Academy, from locker-room films for football coach Dietzel's "Chinese Bandits" to the latest automatic tape facilities for teaching Russian in the language laboratory.

New members who joined I.A.V.A. at this meeting were: Donald V. Van Skoyk, Manager of Film Production, Ralston Purina Co., St. Louis; Byron W. Campbell, Supervisor Photographic Laboratory, Gilette Safety Razor Co., Boston; William D. Davis, Supervisor, Audio-Visual Services, DuPont Co., Wilmington, Del.; Harold N. Read, Staff Assistant, Liberty Mutual Insurance Co., Boston; Martin Broadwell, Engineering Training Supervisor, Southern Bell Telephone Co., Atlanta; Archibald A. Smith, Assistant Head, General Public Relations Services, Humble Oil & Refining Co., Houston; George E. Tribble, Training Supervisor, Delta Air Lines, Atlanta; and Calvin R. Gould, Audio-Visual Director, Martin-Marietta Co., Orlando, Fla.

'63 Spring Meeting at Peoria

Plans were approved to hold the Spring Meeting in 1963 at Peoria, Illinois.

Three technical equipment demonstrations were given at the meeting. Howard Turner, DuKane Corp., demonstrated the Vista Sell, a projector for continuous flow slidefilms. Martin Bahn, Pictronics Corp., put the Powerhouse, a big new slidefilm projector, through its paces. A film describing the new Bell & Howell 16mm sound projector was shown. John Hawkinson, Illinois Central Railroad Co., described use tests made of this projector at his headquarters office in Chicago.

Don Peterson, Caterpillar Tractor Co., showed a new market development film, *Ripping*, made by his department at an outside cost of $1900. The film, a most workmanlike job, describes new methods of clearing land for strip-mining and roadbuilding.

The Semantics of Business

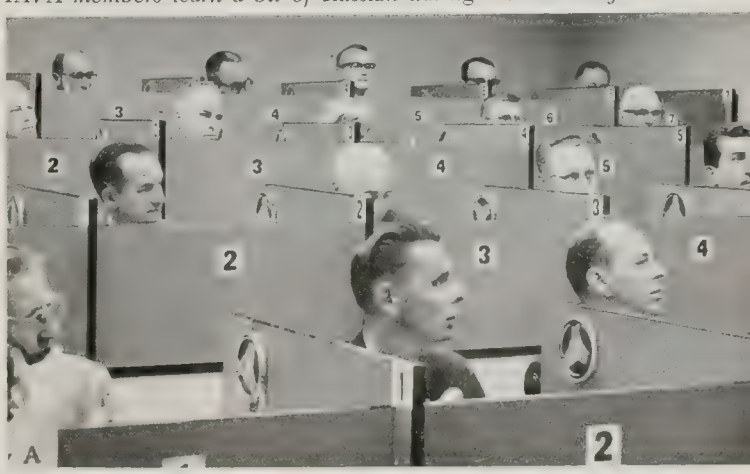
Bill Buch, Lederle Laboratories, devoted his talk to semantics; when management speaks, is it talking the same language as the trainee? Lederle has also experimented with analyzing salesmen's speech patterns with an oscilloscope to determine if manners of inflection are important to the effectiveness of the man's sales talk.

General Stilwell, Commandant of Cadets, welcomed a-v group; hoped for a fruitful program.

Ira Thatcher, United Air Lines, demonstrated that realism — the feeling of absolutely actuality — is important to the success of training films. Dressing sets up, painting up "Hollywood" style, often results in situations that are not believable.

Joe Stanaland, Southern Bell Telephone Co., told about teaching kits that Southern Bell has put together for school use on such subjects as magnetism, wave forms and solar energy. He said the company feels a responsibility to the community and the nation to take part in this work.

Films for Pharmaceuticals



Bill Morris, Baxter Laboratories, noted that pharmaceutical companies can utilize three methods of producing films — going directly to a producer, working with teaching institutions, and working with a combination of the two. He demonstrated with film how each of these systems had certain benefits under certain conditions.

Ed Palmer, New England Telephone & Telegraph Co., said that before the new Telstar film has been released — it is expected shortly — the company has been getting good results with a stop-gap slide show which speakers can take around to club meetings and schools.

Reports Survey of News Clips

General Motors' Public relations executive, John Ford, described a survey that GM has made regarding the use of industry-sponsored filmed news items and featurettes on television. 89 percent of stations responding do use filmed releases; 35 percent receive one to five a week; 39 percent receive six to ten a week; 24 percent get from 11 to 25 every

Language laboratory facilities at the Point are most modern: IAVA members learn a bit of Russian during the Academy tour.

INDUSTRIAL AUDIO-VISUAL EXECUTIVES AT WEST POINT:

week; and 2 percent receive even more than that. 94 percent of the stations said newsclips were helpful to the news editor; 86 percent use GM newsclips.

Mr. Ford's sum-up: be brief, interesting, informative and humorous; don't be too commercial; send out a script and editing information with the film. General Motors gets lots of benefits from this activity, John Ford said.

Larry Warnock, Link Belt Co., showed a film used for marketing a huge and complex machine used in strip mining operations. While only two salesmen use the film in selling the million-dollar German - manufactured machine, the picture has been eminently successful.

Harvey Plants, General Foods, showed a new product film made for internal audiences. It was produced economically in the General Foods test kitchens in White Plains. Mr. Plants' film had fast action, dissolves and other inexpensive in-camera gimmicks. It was a funny, simple story that made an instant success as a salesman's inspirational tool, and has now been picked up by public relations people and will also be used as an actual sales film to be shown to direct customers.

Mr. Plants said these things must have a detailed plan of action when in production; hokum is ok if it is germane to the intended use. He urged in-plant filmakers to reconsider the actual capabilities of the motion picture camera to produce its own good effects.

John Ford (GM) tells of survey of television stations' use of filmed information releases.

Use of slide presentation on Telestar was described by New England Telephone's Ed Palmer.

Joe Stanaland (Southern Bell) explained use of a-v packages to aid school science classes.

Dan Rochford (Jersey Standard) chaired round-robin discussion on solving management problems.

Milt Sebring (Norton) cited advisory role of his department as factor in growth of a-v.

Bill Buch (Lederle) believes audio-visuals vital to secure teacher-trainee understanding.

Program chairman Frank Rollins (Squibb) headed the committee responsible for fine sessions.

Members Buch, Bill Connelly (Union Carbide) demonstrate a problem in semantics . . .

John Hawkinson (Ill. Central) tells his problems in filming in "hard-to-shoot" locations.

Ohio Bell's speaker program, involving 250 company people, is described by Bill Reynolds.

Ira Thatcher (United Airlines) reviewed a realistic new training film made for flight crews.

Scrollfilm sequence that met a script problem is described by Caterpillar's Don Peterson.

Working With Management

Milt Sebring, Norton Co., in one of the most appreciated presentations of the meeting, discussed methods of overcoming the misunderstandings between management and audio-visual people. At Norton Co., audio-visual activities were sporadic at first, but now occupy a position where they are recognized as a valuable service to all divisions of the company. Mr. Sebring urged that audio-visual people lend their skills to work in community and national affairs.

Jack Borland, Smith, Kline & French, described his company's film program designed for professional audiences only. On one recent film, the company reached 100,000 physicians (out of 225,000 in the United States) in a period of nine months. 85 percent of all showings are arranged by Smith, Kline & French detail men.

Good Music Helps Slidefilms

Frank Stedronsky, A. B. Dick Co., who produces a number of sound slidefilms each year, said that the films were unique in that music is used almost throughout — a radical departure for ssf's. Mr. Stedronsky said audiences conditioned to TV and to movies like background music used to create bridges, moods, changes in locale and time lapses.

A. B. Dick films are usually scored with Capital Hi-Q music. To top off his presentation, Mr. Stedronsky showed a recent sound slidefilm with a thousand-dollar original score used at a recent sales convention — and a real rouser it was.

A-V for Kraft Commercials

Jack Duffy, Kraft Foods, explained how audio-visuals are used to prepare for those meticulously-planned live TV commer-

FILM LABORATORIES

ACME FILM LABORATORIES, INC.

1161 N. Highland Avenue, Hollywood 38, California
Phone: HO 4-7471 AC: 213
Year of Incorporation: 1946

Sam Sawelson, *President*
Mel Sawelson, *V.P. & General Manager*
David Christopher, *Secretary, Treasurer*
Bill Sawelson, *Vice President*
Irving Kahn, *Sales Manager*
Pete Wood, *Chief Engineer*
John Killough, *Lab Supt.*

35mm Services: video tape transfer to film.
16mm Services: Color and black & white processing & printing; video tape transfer to film.
Special Services: Television recording dept. including video tape to film, video tape to tape, film to tape, tape editing and tape viewing.

AIR LAB

2405 Airline Way, Phoenix 34, Arizona
Phone: 275-6162 AC: 602
Year of Organization: 1953

John W. Raymond, *President*
Virginia R. Raymond

16mm Services: Ektachrome Commercial and Type ER processing and color printing. 16mm black & white, negative-positive or reversal processing and printing.
8mm Services: black & white, negative-positive or reversal processing and printing.

ALEXANDER FILM COMPANY

Colorado Springs, Colorado
Phone: ME 3-1771 AC: 303
Year of Organization: 1919

Keith Munroe, *President*
Don Alexander, Jr., *Vice President*
Ed Foster, *Treasurer*
Don Ringsred, *Vice President — Detroit*
Howard Olds, *Vice President — New York*
Jay Berry, *President — International Division*

35mm Services: 35mm color and B/W release printing, b&w dupe negatives and master positives; color internegatives, interpositives, master positives; color and black & white processing, overnight dailies.
16mm Services: black & white reversal and negative release printing; workprints — either key or printed edge numbers; black & white dupe negatives and color internegatives; processing of black & white negative or reversal.
Videotape-to-Film Transfers: 35mm or 16mm negatives from videotape recordings, with either 35mm or 16mm reduction or contact release prints.
35mm Filmstrip: 35mm color and black & white filmstrip printing and processing.
Special Services: 35 and 16mm tv commercials; recording of magnetic tape or film to photographic printing track, voice and music recording; conforming film for printing; editing.

ALPHA FILM LABORATORIES

P. O. Box 5325, Baltimore 9, Maryland
Phone: CL 2-4150 AC: 301
Year of Organization: 1919

W. E. Wood, *Owner*

35mm Services: developing, printing, titles, sound recording.

Alpha Film Laboratories:

16mm Services: reversal processing, developing & printing; titles, sound recording — live or from tape.

BACK BAY FILM LABORATORY, INC.

41 Leon Street, Boston 15, Massachusetts
Phone: 445-3333 AC: 617
Year of Incorporation: 1954

Harris Cohen, *President*
Arthur L. Gaskill, *Treasurer-Clerk*

35mm Services: black & white negative processing and black & white release printing.
16mm Services: processing of negative, positive and reversal. Printing color, dupe negatives, reversal dupes, A & B printing, fades, dissolves, edge-numbering.
Special Services: 16mm sound recording (magnetic & optical), transferring ¼" tape to 16mm film, rerecording, mixing, interlock projection, music library. Nomad transferring to tape and film.
Member: Association of Cinema Laboratories

BAY STATE FILM PRODUCTIONS, INC.

35 Springfield Street, Agawam (Springfield), Mass.
Phones: RE 4-3164-5, RE 4-6189
Branches: 80 Boylston Street, Boston, Mass. Phone: HA 6-8904, Lowell Wentworth, vice president, in charge. 200 West 54th Street, Room #1310, New York 19, New York. Phone: CI 6-6799, Carl Ragsdale.
Year of Incorporation: 1943

Morton H. Read, *President*
David Doyle, *Exec. Vice President*
Harold O. Stanton, *Vice President*
Francis N. Letendre, *Vice President*
Lowell Wentworth, *Vice President*
Winifred Pettis, *Treasurer*

16mm Services: color and black & white reversal and negative release printing; workprints — edge numbers; black & white dupe negatives and color internegatives. 16mm processing — black & white negative and reversal.
Special Services: photography, sound recording, printing, processing, editing, scoring, cutting, interlock screening, animation, titles, sound stage, set designing, lighting.

BEBELL & BEBELL COLOR LABORATORIES, INC.

108 West 24th Street, New York 11, New York
Phone: WA 4-8573 AC: 212
Year of Incorporation: 1951

Norman Lars Bebell
Arthur Frederick Bebell
Joan A. Bebell

35mm Services: color and black & white reversal processing; color and black & white release prints; black & white direct dupe positives.
16mm Services: black & white reversal processing, release prints.
35mm Film Strips and Slides: shooting masters — 35mm black & white and color film strip processing.
Special Services: limited animation, test commercials, 35mm Micro-X-Ray duplications.
TV Commercials: 35mm or 16mm, spots and slides, packaging and mailing.

JOHN R. BENNETT LABORATORY

1617 Aberdeen Avenue, Columbus 11, Ohio
Phone: AM 3-7007 AC: 614

Year of Organization: 1951

John R. Bennett, *Owner and Manager*
Dorothy Bennett, *Secretary*
Harry Johnson
Bunnie Coffey

16mm Services: fast service on 16mm processing reversal and negative black & white; release printing; workprints, reversal and negative; printed edge numbering.
Special Services: editing; film repairing and cleaning.

BUCKNER'S

1128 Unruh Avenue, LaPuente, California
Phone: 330-2902 AC: 213

Year of Incorporation: 1948

Lee Buckner, *Owner-Manager*

16mm Services: color and black & white reversal and negative release printing, processing b/w reversal or negative.
8mm Services: 8mm processing, striping, editing, synchronized sound from any synch. medium.
Special Services: Specialists in small orders for electroprinting sound for reversal dupes.

BYRON MOTION PICTURES, INC.

1226 Wisconsin Avenue, N. W., Washington 7, D. C.
Phone: FE 3-4000 AC: 202

Year of Incorporation: 1938

Byron Roudabush, *President*
Dudley Spruill, *Vice President & Gen. Manager*
Holger Kjeldsen, *Asst. General Manager*
James A. Anderson, *Technical Director*

35mm Services: black & white spray negative and positive processing. Black & white contact, step & blowup printing.
16mm Services: black & white negative, positive and reversal processing. Color negative-positive processing. Black & white and color printing. Contact, step, reduction, 1-to-1 optical and additive printing.
Other Laboratory Services: edge numbering, ultrasonic cleaning, Peerless film treatment, magnetic striping.
Other Services: editing, conforming, music library, editorial, room rental; Westrex sound, recording, mixing, transfer-to-optical printing track, interlock.
Member: Association of Cinema Laboratories

CALVIN PRODUCTIONS, INC.

1105 Truman Road, Kansas City 6, Missouri

A. "Ike" Bartimoccia, *President*
Morris Bleckman, *Vice President*
Susana Bleckman, *Secretary*

16mm Services: color and black & white reversal and negative release printing; workprints — either key or printed edge numbers black & white dupe negatives; processing — black & white negative or reversal.

Special Services: four hour service if desired, and editing service available.

SPECIALISTS IN FILMSTRIP & SLIDE PROCESSING AND PRINTING

COLOR FILM CORPORATION

520 North Barry Avenue, Mamaroneck, New York
Phone: OW 8-6350 AC: 914
WE 3-3322 (New York City) AC: 212

Year of Organization: 1950

Richard N. Jayson, *President*
C. Nelson Winget, *Sales Manager*
Maureen K. Hallam, *Office Manager*
Robert E. Johnson, *Quality Control Manager*
Arthur M. Vilchick, *Production Manager*

35mm Services: color filmstrips only; printing, processing, packaging, master negatives.

FRANK HOLMES LABORATORIES, INC.

1947 First Street (Box 991), San Fernando, California
Phone: EM 5-4501 AC: 213

Year of Incorporation: 1948

Frank A. Holmes, *President*
John R. Wolber, Jr., *Vice President*
Kenneth M. Bell, *Secretary-Treasurer*

35mm Services: color processing Ansco reversal and Kodak color positive, 35mm or 8mm perforated; 35mm color filmstrip masters and release prints. 35mm color slide duplicating.

IDENTICOLOR LABORATORY INC.

7401 Melrose Avenue, Hollywood 46, California
Phone: OL 3-5115 AC: 213

Year of Incorporation: 1961

Dalton B. Creaser, *President & Gen. Manager*
Rolf Skolnick, *Vice President — Sales Manager*
Merle Ewell, *Plant Manager*
Florence Creaser, *Secretary & Treasurer*

35mm Services: filmstrip masters, color printing, art and hot press titles; cutting, canning, and packaging.

Special Services: 35mm slide duplicating, autoheatseal mounting, imprinting, and packaging; original Kodachrome copies of flat art or products.

MANHATTAN COLOR LABORATORY, INC.

210 West 65th Street, New York 23, New York
Phone: TR 3-1919 AC: 212

Year of Incorporation: 1952

Selwyn Robbins, *President*
Meyer M. Glikin, *Vice President*
Bernard A. Barnett, *Marketing Manager*
Richard Lim, *Production Manager*

35mm Services: specialized facilties for filmstrip, slides, and stereos; negative and positive processing lab; release print service, contrast masking, vacuumating, cutting, and canning; 24 hour service on fully color corrected answer print service.

Special Services: A & B roll filmstrip printing; double frame crawl photography with no frameline, stereo slides. consultation service.

SOCIETY FOR VISUAL EDUCATION, INC.

1345 Diversey Parkway, Chicago 14, Ill.
Phone: LA 5-1500 A/C: 312

Date of Organization: 1919

John C. Kennan, *President*
Paul G. Rosenau, *Director, Industrial Sales*

Services: specialist in single and double-frame filmstrip production services and processing; art; hot-press titles; filmstrip and slide animation camera service; automatic 2 x 2 slide binding and automatic slide duplication. Distribution of sponsored filmstrips to schools.

WORLD IN COLOR PRODUCTIONS

P. O. Box 392, Elmira, New York

Services: 35mm color slide duplicates; 35mm single frame filmstrips and direct contact copies from master strips. Color paper prints. 35mm stereo duplicates.

Check "35mm Services" in Lab Listings

• The six filmstrip/slide laboratory companies listed in this area specialize in this type of work. Other listed laboratories in these pages also offer these services. See "35mm Services" within individual listings for complete data on other sources of filmstrip and slide services.

CINE MAGNETICS, INC.

202 E. 44th St., New York 17, N. Y.
Phone: MU 2-2780 A/C: 212

Services: see complete text under Sound Recording Services, this section.

CINEMA RESEARCH, INC.

how to tell a lot of dealers everything...fast

"It would take us a dog's lifetime to tell our long list of dealers the research and field-test story of our Dog Chows or other Purina Chows—if we didn't use movies"—says John McGinty, Vice President, Ralston Purina Co.

"We compress the entire story for each Chow into a memorable few minutes, pack it with the complete selling argument, document it with live-action case histories, put it all into a can, send it along with a good projector to a dealer meeting anywhere, and know that no matter who presents the story, it'll be letter-perfect every time it's seen.

"The time saved, for dealers and for us, is enormous.

"Sound projectors are now standard equipment for our sales divisions and branch plants.

"Our main qualification for projectors is that salesmen be able to run them easily, without embarrassment. KODAK PAGEANT Projectors qualify."

KODAK PAGEANT 16mm Sound Projectors never call attention to themselves, never embarrass the operator. The newest model (AV-126-TR) is perfect for sales. It is quiet-running, simple, and dependable, suited to small-room presentations or huge auditorium showings. Its transistorized sound system needs no warm-up, is designed to remain maintenance-free for the life of the projector. A school child can set it up and operate it. Many actually do in schools across the country.

* * *

A Kodak audiovisual dealer will demonstrate a KODAK PAGEANT *16mm Sound Projector for you at your convenience. No obligation, of course.*

KODAK PAGEANT Projector ⟩ **EASTMAN KODAK COMPANY,** Dept. 8-V, Rochester 4, N. Y.

Tom Willard, N.Y., Offers Special Cinematography Service

☆ A new company devoted exclusively to producer and sponsor requirements for motion picture photography has been formed by Tom Willard with headquarters at 1860 Broadway in New York city.

well-known in the factual film production field as both a commercial producer and as former chief of film production within industry, Willard emphasizes that the new service organization will specialize in photographic and sound recording requirements of producers and sponsors, from scene to delivery of workprint. Organizations with or without photographic facilities will be provided with foremost cameramen as well as additional camera personnel and equipment.

The new company will not produce complete films. It will provide only personnel and equipment, delivering developed negative and workprint to the client. Complete coordination between all steps in the photographic process is cited as a salient factor in this cinematography service. The Manhattan telephone number is JU 6-2600.

Bebell & Bebell Offers 16, 35 Processing of B&W Reversal

☆ Bebell & Bebell Color Laboratories, Inc., New York, now offers reversal processing of both 16mm and 35mm high-speed b&w reversal film.

A new Houston-Fearless film processing unit has been tested for the past month and is now in operation. All reversal films, including perforated and unperforated, are handled on an all-day and all-night basis.

Copley Productions: Now Circling the Globe with Facts . . . on Film

Documentary films by Copley Productions now have worldwide distribution. In Austria and Argentina . . . Venezuela and Vietnam . . . in countries large and small, an exciting picture of American newspapers comes to life in color and sound on film. These same productions — dramatizing new techniques, ideas and experiences in the newspaper field — are available without charge to newspapers, universities, business and civic organizations in this country.

Please direct inquiries to the nearest Copley Productions distribution center:

(CONTINUED ON NEXT PAGE)

and you can take your movies anywhere. New General Electric Portable CINEMA LIGHT—needs no wall plug, no extensions. It's as portable as your camera.

Now, there's no excuse for taking poorly lighted movies. The new General Electric Portable CINEMA LIGHT makes it possible to light the scene anywhere. It's a home-movie light powered by a compact nickel-cadmium battery...a single-light unit that does the job of a bulky multiple-light bar, giving you a wide, smooth beam of controlled light anywhere. Indoors or out. (It takes you about sixty minutes to recharge the transistorized battery pack, and it can be recharged thousands of times.)

The lamp itself is amazing: its full 3-hour rated life will let you shoot more than 40 rolls of home-movie film; a built-in double reflector (completely sealed against corrosion) puts *all* the light where you want it; and the powerful beam spread gives enough coverage for both wide angle and telephoto lenses.

You get all this in a compact, smartly-designed unit that's as portable as your movie camera—proof that at General Electric the accent is on value. Ask for a demonstration of the new General Electric Portable CINEMA LIGHT at your favorite camera counter, and pick up a free copy of the 8-page guide that tells you all about it.

Manufacturer of professional magnetic tape equipment and accessories

Ampex Audio Division
1020 Kifer Road, Sunnyvale, California.

Manufacturer of professional magnetic tape equipment and related accessories.

Bach Auricon, Inc.
(see listing under Cameras)

Manufacturer of sound-on-film recording equipment including single & multi-track recording on prestriped 16mm film.

Kudelski
6, ch. de l'Etang, Paudex — Lausanne, Switzerland.

Manufacturer of professional portable lip-sync tape recorders and sound systems including the Nagra III.

Magnasync Corporation
5546 Satsuma Avenue, North Hollywood, California. Phone: TR 7-0965. Cable: MAGNASYNC.

Manufacturer of professional sound recording equipment and sound systems; dubbers and interlocked reproducers for transfer work, assembly and magnetic mixing.

Precision Laboratories
Division of Precision Cine Equipment Corporation, 928-930 East 51st Street, Brooklyn 3, New York.

Manufacturer of sound editing equipment.

MANUFACTURERS & DISTRIBUTORS OF FILM PRODUCTION EQUIPMENT IN U.S.A

Sound Equipment:

Ryder Sound Services, Inc.

1161 North Vine Street, Hollywood 38, California.

Rental of magnetic sound recording equipment for production.

Reevesound Company, Inc.

35-54 36th Street, Long Island City 6, New York.

Manufacturer of Reevesound recorders for optical and magnetic motion picture sound track recording.

Stancil-Hoffman Corporation

845 North Highland Avenue, Hollywood 38, California. Phone: HO 4-7461.

Manufacturer of magnetic tape recording equipment.

Superscope Inc.

Audio Electronics Division

8150 Vineland Avenue, Sun Valley, Cal. Phone: 875-0810.

Manufacturer of professional portable tape recorders.

Television Associates of Indiana, Inc.

East Barber Avenue, Michigan City, Indiana.

Manufacturer and supplier of tape recording and sound accessories.

Westrex Company

Division of Litton Industries

6701 Variel Avenue, Canoga Park, Cal.

Manufacturer of sound recording and cutting equipment.

Animation Equipment Manufacturers

Animation Equipment Corporation

38 Hudson St., New Rochelle, New York. Phone: NE 6-8138

Branches: 7445 Sunset Blvd., Hollywood, Calif. Phone: HO 9-7080. 33 Liberty Lane, Addlestone, Surrey, England.

Manufacturer of the Oxberry line of animation stands, aerial-image equipment and all related accessories.

Caesar Manufacturing, Inc.

480 Lexington Avenue, New York 17, N.Y. Phone: YU 6-5920.

Photo Animation, Inc.

34 South West St., Mount Vernon, N. Y. Phone: MO 4-6069.

Portman animation stands, equipment and accessories.

Other Equipment Makers

• This source list will be supplemented from time to time on receipt of additional data.

Rental, Sales, Service for All Cine Equipment

Behrend Cine Corporation

161 E. Grand Ave., Chicago 11, Ill. Phone: MI 2-2281.

Branch: 9930 Greenfield Rd., Detroit, Mich.

Rental, sales and service of cine equipment; lighting, editing and sound equipment.

Birns & Sawyer Cine Equipment

6424 Santa Monica Blvd., Hollywood 38, Calif. Phone: HO 4-5166. Cable: Birnsaw.

Rentals, sales and service of cine equpiment and all related accessories. Specializes in Arri equipment.

Burke & James, Inc.

321 So. Wabash Ave., Chicago 4, Illinois. Phone: HA 7-8393.

Sales and service of photographic and cine equipment and all related accessories.

Camera Equipment Company, Inc.

315 West 43rd St., New York 36, N.Y. Phone: JU -1420.

Branches: 51 East Tenth Ave., Hialeah, Florida. Phone: TU 8-4604. 6510 Santa Monica Blvd., Hollywood, Calif. Phone: HO 9-8321.

National rental, sales and service of professional cine equipment, cameras, lights, recording, projection and editing equipment; consultation services. See adv. these pages.

The Camera Mart, Inc.

1845 Broadway (at 60th St.), New York 23, New York. Phone: PL 7-6977. Cable: Cameramart.

National rental, sales and service of professional cine equipment and accessories. See adv. these pages.

Camera Service Center

333 West 52nd St., New York 19, N. Y. Phone: PL 7-0906.

Rental, sales and service of cine equipment and accessories.

Florman & Babb, Inc.

68 West 45th Street, New York 36, New York. Phone: MU 2-2928.

Rental, sales and service of photographic, cine equipment, recording equipment and all related accessories. See adv. these pages.

Hollywood Camera Exchange

1607 North Cosmo Street, Hollywood 28, California.

Rental, sales and service of cine and photographic equipment, and related accessories.

Gordon Enterprises

5362 N. Cahuenga, North Hollywood, Calif. Phone: TR 7-2139.

Rental, sales and service of professional cine and photographic equipment and accessories.

National Cine Equipment, Inc.

209 W. 48th St., New York 36, N. Y. Phone: CI 6-0348.

Rental, sales and service of professional cine, photographic equipment and accessories.

S. O. S. Photo-Cine-Optics, Inc.

602 W. 52nd Street, New York 19, N. Y. Phone: PL 7-0440.

Branch: 6331 Hollywood Blvd., Hollywood, 28, Calif. Phone: 467-2124.

National rental, sales and service of cine, photographic equipment and all related accessories for the producer. See adv. these pages.

Specialists in Lighting Equipment Rental & Sales

Jack A. Frost

234 Piquette, Detroit 2, Michigan. Phone: TR 3-8030.

Canadian Office: 6 Shawbridge, Toronto, Canada. Phone: BE 2-1145.

Rental, sales and service of lighting equipment; also handles other types of production equipment; specializes in "package deals." See adv. these pages.

L. A. Stage Lighting Company

1451 Venice Boulevard, Los Angeles 6, California. Phone: DU 4-1241.

Rental, sales and service of lighting equipment and related accessories.

Masterlite Cine Rentals

7277 Santa Monica Boulevard, Hollywood 46, California. Phone: HO 5-7141.

Masterlite Cine Rentals:

Rental and service of lighting & grip equipment; other production services for studio and location film production.

Charles Ross, Incorporated

333 West 52nd Street, New York 19, New York. Phone: CI 6-5470.

Rental, sales and service of specialized lighting equipment including generator trucks & trailers, grip equipment and props. See adv. these pages.

Studio Lighting Company

2212 North Halsted Street, Chicago 14, Illinois. Phone: EA 7-2800.

Rental, sales and service of lighting equipment including lights, cable, boxes, and grip equipment. See adv. these pages.

Studio Lighting

Century Lighting, Inc.

521 West 43rd Street, New York 3 New York. Phone: CH 4-7050.

Manufacturer of Lekolite and Fresnel lens spotlights, floodlights and scoops and a variety of striplights; many other related accessories.

ColorTran Industries

630 South Flower Street, Burbank Calif. Phone: 849-5991.

Specializes in the manufacture of high-intensity light sources and systems, systems for explosion-proof atmospheres; absorbing and reflecting heat filters and other accessories.

General Electric Company

Lamp Division

Nela Park, Cleveland 12, Ohio.

Manufacturer of the Portable Cinelite Light and many other types of lighting equipment and accessories.

Lowell-Light Photo Engineering

421 West 54th Street, New York 19, New York. Phone: PL 7-2125.

Manufacturer of the Uni-6 lighting kit.

J. G. McAlister, Inc.

1117 North McCadden Place, Hollywood 38, California. Phone: HO 3253.

Bardwell & McAlister lighting equipment, generators; both sales and rentals.

Mole-Richardson Company

937 North Sycamore Avenue, Hollywood 38, California. Phone: OL 3660.

Manufacturer of specialized lighting equipment for motion picture and television studios.

Naren Industries, Inc.

2104 North Orchard Street, Chicago Illinois. Phone: DE 7-0446.

Manufacturer of lighting equipment and related accessories.

Novatech Corporation

282 Seventh Avenue, New York 1, New York.

Manufacturer of lighting equipment including the Nova Twin with quartz iodide lamps.

Slyvania Electric Products, Inc.

730 Third Avenue, New York, New York Phone: 551-1000.

Manufacturer of the Sun Gun professional light and accessories; other lighting equipment.

Westinghouse Electric Corporation

Lamp Division

Bloomfield, New Jersey.

Manufacturer of lamps for all motion picture and TV studio flood and spot light requirements.

Film Editing & Inspection Equipment

Editor Precision Equipment Co.
30 W. 46th St., New York 36, N. Y.
Film editing equipment manufacturer.

The Harwald Company
245 Chicago Avenue, Evanston, Ill. Phone: DA 8-7070.
Manufacturer of Inspect-O-Film line of professional film inspection equipment, with all related accessories and modifications. Also professional splicing equipment, film storage equipment, etc. See adv. these pages.

Hollywood Film Company
56 N. Seward St., Hollywood 38, California. Phone: HO 2-3284.
Branches: 122 W. Kinzie, Chicago 10, Ill. Phone: 644-1940. 524 W. 43rd St., New York 36, N. Y. Phone: LO 3-1546.
Manufacturer of precision editing equipment and accessories for professional cine use.

Kidde Machine Corporation
5 Farrand St., Bloomfield, New Jersey.
Manufacturer of Kidde inspection equipment and related film editing accessories.

Paulmar, Incorporated
144 W. Chicago Ave., Chicago 51, Ill. Phone: CA 7-5400.
Manufacturer of Paulmar line of film inspection equipment and related accessories.

Moviola Manufacturing Company
539 Riverton Ave., North Hollywood, California. Phone: TR 7-2173.
Manufacturer of Moviola editing equipment and all related editing accessories.

Neumade Products Corporation
20 W. 57th St., New York 19, N. Y. Phone: JU 6-5810.
Manufacturer of Neumade editing equipment.

Film Splicing Accessories

Permacel
New Brunswick, New Jersey.
Manufacturer of splicing equipment and Permacel film splicing tape.

Prestoseal Manufacturing Corporation
327 33rd Street, Long Island City 1, New York.
Manufacturer of film splicing equipment.

Film Reels and Cans

Compco Corporation
1800 N. Spaulding, Chicago 47, Ill. Phone: EV 4-1000.
Manufacturer of Compco line of film cans and reels for all sizes. See adv. these pages.

Comprehensive Service Corporation
245 W. 55th St., New York 19, N. Y. Phone: CO 5-6767.
Branch: 829 N. Highland Ave., Los Angeles, Calif. Phone: HO 2-0969.
Motion picture reels, cans, equipment and accessories.

Goldberg Bros.
3535 Larimer, Denver, Colorado.
Manufacturer of the Goldberg line of film reels and cans.

Motion Picture Enterprises, Inc.
Tarrytown 83, New York. Phone: ME 1-4767. in N. Y., phone: CI 5-0970.

Filmstrip Containers

Buckeye Stamping Company
555 Marion Road, Columbus 7, Ohio. Phone: 443-9458
Mfr. of filmstrip cans, etc.

Plastican Corporation
Box 157, Butler, New Jersey
Full line of plastic containers.

Richard Manufacturing Co.
5914 N. Noble Ave., Van Nuys, Calif.
Full line of plastic containers.

Fiberbilt Sample Case Co.
40 W. 17th St., New York 11, N. Y. Phone: WA 9-7772.
Manufacturer of Fiberbilt shipping cases for film requirements. See adv. these pages.

William Schuessler
361 W. Superior St., Chicago 10, Ill. Phone: SUperior 7-6869.
Manufacturer of complete line of film shipping cases for motion picture and sound slidefilm requirements; also glass slide, filmstrip and salon print shipping cases. See adv. these pages.

Camera Tripods

Quick-Set, Inc.
8121 North Central Park Avenue, Skokie, Illinois. Phone: OR 3-1200.
Manufacturer of full line of tripods, pan heads, stands, dollies, and mobile instrument positioning equipment.

TA Manufacturing Corporation
Cinema Products Division
4607 Alger Street, Los Angeles 39, Calif. Phone: CH 5-3748.
Manufacturer of Thomas fluid pan heads.

Film Laboratory Equipment Manufacturers

Andre Debrie Manufacturing Company
14-29 112th Street, College Point 56, New York.
U.S. distributors of Andre Debrie film processors and other lab equipment.

Bell & Howell Company
Professional Equipment Division
7100 McCormack Road, Chicago 45, Illinois.
Manufacturer of film printing equipment for motion picture laboratories, including 16mm, 35mm, 35/32mm, 65/70mm, and 70mm sizes.

Calumet Manufacturing Company
6550 N. Clark Street, Chicago 26, Illinois.
Manufacturer of print processors, mixing and storage tanks, washers, sinks, and other laboratory accessories.

Oscar F. Carlson Company
2600 Irving Park Road, Chicago 18, Illinois.
Manufacturer of Depue motion picture film printers, automatic light control boards and microfilm printers.

Computer Measurements Company
Division of Pacific Industries
12970 Bradley Avenue, San Fernando, California. Phone: EM 7-2161.
Manufacturer of Unicorn products, including the Unicorn solvent film cleaner, and the Unicorn automatic film splicer.

Filmline Corporation
43 Erna Street, Milford, Connecticut.
Manufacturer of black & white and color motion picture film processing equipment for 16mm, 35mm, and 70mm film.

Oscar Fisher Company, Inc.
P.O. Box 426, Newburgh, New York.
Manufacturer of processal "dry" spray immersion film processor; Mark film processors; other processing equipment.

Frank Herrnfeld Engineering Corporation
5716 Camille Avenue, Culver City, California.
Manufacturer of continuous and step motion picture printing equipment; also makes other testing and lab equipment.

Hi-Speed Equipment, Inc.
73 Pond Street, Waltham 54, Massachusetts.
Manufacturer of full line of Hi-Speed products for the laboratory including processing machines and related systems.

Houston Fearless Corporation
Westwood Division
11801 West Olympic Blvd., Los Angeles 64, California.
Manufacturer of Houston Fearless motion picture film processing machines and related equipment.

Hurletron Incorporated
Electric Eye Equipment Division
1938 East Fairchild Street, Danville, Illinois.
Manufacturer of automatic shutter control systems for high-speed motion picture printers; other lab accessories.

Lipsner-Smith Corporation
3475 West Touhy Avenue, Chicago 45, Illinois.
Manufacturer of the CF-2 Ultrasonic Film Cleaner.

JM Developments, Inc.
116-118 West 29th Street, New York 1, New York.
Manufacturer of precision motion picture film laboratory printer.

Macbeth Instrument Corporation
P.O. Box 950, Newburgh, New York. Phone: JO 1-7300. Cable: ARTDAY.
Manufacturer of motion picture laboratory equipment.

J. A. Maurer, Inc.
37-01 31st Street, Long Island City, New York.
Manufacturer of Maurer-Matic film processor, 16/35mm model and 70mm model, and other laboratory equipment.

OPTOmechanisms, Inc.
Engineers Hill, Plainview, New York.
Manufacturers of motion picture laboratory processors.

Photomechanisms, Inc.
15 Stepar Place, Huntington Station, New York.
Manufacturer of Rapidata Processing equipment (negative & positive).

Photo-Sonics, Inc.
820 South Mariposa Street, Burbank, Cal.
Manufacturer of Acme motion picture laboratory equipment.

Sickles Sales and Service Company
400 West Culver Street, Scottsdale, Arizona. Phone: WH 6-4323.
Manufacturer of slide duplicators, optical printers, color printers, film strip printers.

Uhler Cine Machine Company
15762 Wyoming Avenue, Detroit 38, Michigan. Phone: UN 1-4665. Cable: UHLCIMA.
Manufacturer of motion picture laboratory equipment.

Where every filmstrip gets major motion picture care!

At CFI the same talent and technology that have gone into 40 years of processing major motion picture films go into your filmstrip. The same consistent excellence that only precision equipment can produce. The same accurate chemical control. The same 100% inspection. What does this mean to you? The craftsmanship you put into the original concept and execution reaches the screen. The impact you put in . . . CFI brings out.

CFI's COMPLETE 35MM FILMSTRIP FACILITIES:

- Masters in color and black-and-white
- Superimposures • Art work • Titles
- Direct photography of products or inserts

IFPA BOOKSHELI

as Reviewed by
Dr. Raymond Fielding, UCL

THE PICTURE HISTORY OF PHOTOGRAPHY

by Peter Pollack, Publ. by Harr N. Abrams. 624 pp. $17.50.

☆ Picture books bulk large in th annual publication of what or literary critic has called "Noi books" — those predominantly i lstrated publications which aren really books at all but which serv out their useful lives as Christma gifts, as decorative accessories fc the living room mantel piece, ar as indisputable evidence that th owner is doing well enough t spend $20 a volume for a real well printed work.

Most "Non-books" serve r greater function than as points departure for cocktail party co versations. Happily, this handson new pictorial history of photogr phy is an exception — all connoi seurs of the photographic imag whether motion picture or sti will wish to read and perhaps eve buy a copy of it.

A Work of Style and Taste

The division of the work in historical periods, the selection representative photographs (ov 600 of them), and the typograph cal design of the volume are executed with considerable sty and taste. What is even more in portant in a work of this sort that the photographs are accor panied by that rarest of pictu book ingredients — an intelliger readable, and soundly researchl text.

In a well planned picture vc ume such as this, the printed cor mentary provides just enough h torical information necessary f an understanding of those scient ic, economic, and artistic facto which have figured in the develo ment of the art, while at the sar time leading the eye of the read from one richly illustrated secti to the next.

Covers Four Historic Periods

The Picture History of Photo raphy is divided chronologica into four sections dealing, respe tively, with the beginnings of t art, the masters of the nineteer century, the artists of the mode era, and the state of contempora photography.

Each of these sections featu the best work of those photogr phers who figured most promine ly in the period's developmei

Daguerre, Niepce and Fox-Talbot during the laboratory period; Hill, Hesler, Nadar, Cameron, Brady and Muybridge in the nineteenth century; Stieglitz, Steichen, Atget, Adams, Weston and others in the wentieth.

The book concludes with a fifty-photograph survey of contemporary work throughout the world. From beginning to end the quality of the printing is consistently fine.

There are many oversimplifications and abridgements of historical detail, of course, particularly in the earlier sections, but considering the nature of the publication these can be overlooked.

The book will probably be most appreciated by those individuals who are either already familiar with the complicated chronology of photographic history and so do not need a fully documented treatment, or by those who have no familiarity at all with the subject and who will benefit from Pollock's carefully planned and easily grasped display of changing style, form, and subject matter during the last century and a quarter of photographic work.

Resignation of John Mahon Is Accepted by the Board

☆ The Board regrets to announce the resignation of IFPA President, John C. Mahon. Mr. Mahon is leaving his present position as motion picture producer of North American Aviation Corporation in order to accept a position as Associate Professor on the motion picture faculty of New York University.

Mr. Mahon returns to the academic community after a number of years in the commercial and non-theatrical film industries. Previous to this, he was a member of the motion picture faculty of the University of California, Los Angeles.

As an active member, John Mahon has played an important role in the growth and development of IFPA. In addition to his numerous committee assignments, Mr. Mahon served a term as Chairman of the Southern California chapter.

The Board takes this opportunity to congratulate Mr. Mahon on his new assignment which is a reflection of the increasingly strong ties between the industrial and university film producer.

A nominating committee has been selected by the Board of Directors to arrange for an election by the membership for Mr. Mahon's successor.

THE INDUSTRY FILM JOURNAL

National News-Letter of the Industry Film Producers Association

New England Chapter of IFPA Is Formed

A NEW CHAPTER of IFPA is now operating in the New England area. With its mailing address in New Bedford, Mass., the *new* New England Chapter offers a focal point for the enthusiasm for interchange of ideas and general discussion by industry film-makers, producers, writers, and others engaged in the field of business audio-visual communication in New England's rapidly growing space-age industrial area.

The formation of this new chapter gives us the opportunity to outline the steps required for any other groups interested in forming an IFPA Chapter. First, a formal application must be made to the IFPA National Executive Board, Industry Film Producers Association, Inc., P. O. Box 564, Hollywood 28, California.

This application should state the general area to be served by the new Chapter, the city around which this area will be generally situated, and must be signed by five active members of IFPA. Membership applications are available from the National Board and any five people who are active in "in-plant" communications activities can start the ball rolling in their area by sending such an application together with their checks for $12 to cover their first year's dues.

The National Board will then consider the application and, after due consideration, formally accept the new chapter.

Any one interested in the possibilities of forming other new IFPA Chapters is urged to contact Tony Gorsline, IFPA National Chapters Vice President, c/o Management Systems Corporation, 2043 Westcliff Dr., Newport Beach, California, for further information.

The IFPA National Executive Board wishes to extend its heartiest best wishes to the newest IFPA Chapter and suggests that all those in the New England area contact this new chapter by writing to: IFPA New England Chapter, P. O. Box 150, New Bedford, Mass.

What Ever Happened to the Documentary?

by Basil Wright

I HOPE THAT THE title on this page does not suggest that Documentary no longer exists, but rather that there have been a number of changes in the world of documentary film.

Though I am qualified to comment only from the British point of view — it was in Britain, after all, that documentary film was first used as a definite, organized method of communication. Most important, its use came at a crucial point in the development of the motion picture in the realm of public information and public relations.

During the twenties, with the increasing complexity of modern civilization, it became clear that the broad mass of people were getting much of their information and education from mass media, in particular the press and the motion picture, rather than from the edu-

(CONTINUED ON NEXT PAGE)

"Pat" Patterson is President of University Film Producers

☆ O. E. Patterson, Operations Head of the newly formed Academic Communications Facility at the University of California at Los Angeles, is the new President of the University Film Producers Association.

UFPA, a 300 member national organization of educational film producers, held its 16th annual

"Pat" Patterson Heads UFPA

meeting recently at Glacier National Park with Montana State University as host. It has scheduled its 1963 conference for the University of Miami, Coral Gables, Florida.

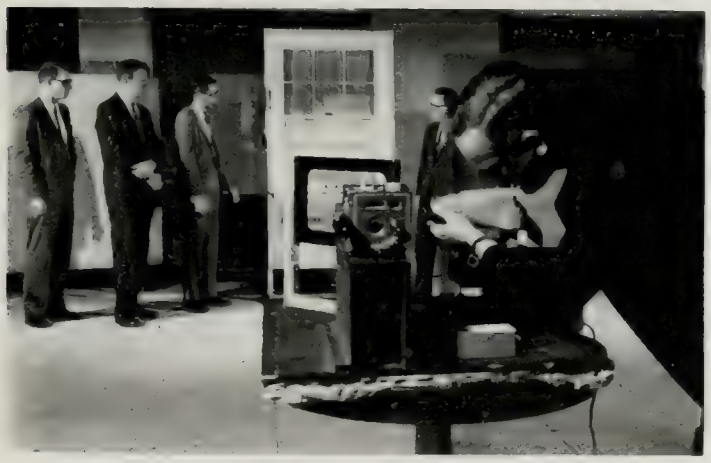
Patterson, a resident of West Los Angeles, has been active in university motion pictures for the past 10 years at UCLA, where he received his M.A. degree in 1951. He is a trustee of the University Film Foundation; Editorial Vice President of the Industry Film Producers Association; a delegate to the national Educational Media Council and a member of the Society of Motion Picture and Tele-

Members and guests of the University Film Producers Association at Glacier Park meeting.

UFPA Elects "Pat" Patterson:

CONT'D FROM PRECEDING PAGE

vision Engineers. He is a graduate of San Francisco State College.



The Academic Communications Facility at UCLA is unique among universities in that it consolidates, within a single administration, all of the communications media.

A member of the International Liaison Center for Schools of Cinema and Television in Paris, France, the UFPA sends two delegates annually to the European meetings. In 1961, delegates from 15 foreign countries came to the United States under the auspices of the State Department to attend the UFPA conference, held that year in Berkeley, California.

DELAWARE VALLEY MEMBERS SEE JENKINS PROCESS SYSTEM

The Jenkins Front Process Projection System is explained to members of Delaware Valley chapter. Chairman Stallings (who presented paper) adjusts the slide projector; Val Berzins checks image brightness.

As still camera moves closer to optical axis of Maurer, increase in brightness becomes apparent. At optical axis, shadows will disappear. Spill image to left of window is also falling on the reflex screen material. Foreground subjects mask own shadows.

Multi-Screen Technique of Charles Eames Next Month

A key feature of your next issue is the illustrated story of noted designer Charles Eames and his effective multi-screen techniques, featured at Seattle's World Fair and in U.S. exhibitions in Brussels, Moscow, etc. It's all part of our big "Postscript Seattle" special section which also includes "Preface New York '64" and the story of what's ahead there!

What Ever Happened to the Documentary

(CONT'D FROM PRECEDING PAGE)

cationists themselves. Educational standards, it seems, had lagged behind the progress of civilization.

At the same time, the motion picture has been slowly recognized as a new art form. This happened first throughout Europe. New types of films appeared, such as the remarkable German films of the earlier twenties, then films by Eisenstein and others, making it clear that the motion picture was something to reckon with. And not merely as a method to entertain the masses, but for other purposes, too.

National Need, New Art Form

The documentary film movement, in other words, provided a form of expression which could meet a definite need in all nations, and, at the same time, develop a new art form.

At the university, I always intended to be a writer or a playwright, but the impact of motion pictures changed my mind. A large number of other young people had the same feelings. But, they were not all of them particularly encouraged by the average output from the British films and were open to other opportunities.

Thus, this movement wanted to do two things. First, it wanted to use films for public information and education and as a method of discussing the social, economic, political and other problems of the British Isles. Then, it wanted to experiment with the motion picture as an art medium.

These two goals really made it possible for the rapid and, indeed, almost sensational development of the documentary film between 1929 and 1939.

It is interesting to note that *Night Mail* was part of a program of films that were made not for the public, but for the purposes of internal communication. The idea was that one section of the General Post Office did not really know what was happening in other sections, so we made a number of films to fill this need. Several of such documentaries were highly successful at the box office.

Development in 30's Rapid

The development of the documentary film during the 1930's was extremely rapid. The art of public relations was developing at a fast pace in Great Britain and the impact of the films which we were making for the G.P.O. was considerable. And it is important to remember that Shell Oil, the British Commercial Gas Association, Imperial Chemical Industries, a other similar organizations took the idea of film to instruct lar groups on technical subjects.

But the Gas Association and o or two other organizations we much more interested in sociolo cal documentaries. They started make films of their own.

The first of three films ma was called *Housing Problems*, a dealt with the slums of Londo The second one, *Enough to Ea* was about the nutritional problen of the poor in Britain. A thi film, called *Children's School*, w on faulty physical conditions terms of school building and sea ing, the sort of thing under whi all too many British school ch dren had to live in those days.

Responsibility to Community

By producing such films, t Gas organization exhibited a sen of responsibility to the communi it was serving. Of course, it w very much to the interest of t Gas organization to have the slu pulled down, new apartment bloc built up, and schools rebuilt. Pe ple who eat better food need b ter things to cook on. All of the would involve the installation gas apparatus.

In view of the times, the pub relations of the electricity peop was rather old fashioned. Grad ally, they became enraged by t sociological films about gas, ar too late, tried to make similar film They were particularly enrag when the Gas organization act ally made a film in which th pointed out the advantages of bo electricity and gas!

Moved Outside Theater Walls

However, the important develo ment was that documentary filr had expanded outside the confin of the movie theaters. It is ve important to remember that no of this would have been successf had we not created our own d tribution.

John Grierson—the founder documentary in Britain—put for the new line of thought that the were more seats outside the ciner halls than there were inside. I said that the number of seats schools, universities, college women's institutes, unions, and s cialist get-together clubs amount to many millions, and this is ve true.

We were not necessarily maki films for public entertainment. number of our films would by th very nature have no place in supporting program in an ordina

notion picture theater. Therefore, e felt that good distribution would epend on our reaching the new *on-theatrical* outlets. No charge as made for these sponsored documentary films. The production organizations, as well as the government, circulated their catalogues idely, and the audience for documentaries grew very rapidly.

Ready to Serve in Wartime

This type of film filled a social eed, a need to disseminate information, and this fact was very important to Great Britain when the econd World War broke out. The ucleus of the complete machinery or distributing visual information ad already been created, and it ad vital and multifarious uses uring the war emergency.

Documentary organizations had o expand in order to meet the normous demand for films of very sort, from propaganda films own to very simple pictures aching people how to do simple asks. It was extraordinary to see ow the films were developed in is way and the practical uses to hich films were put.

In the middle of the war the ermans started dropping an enrely new form of incendiary bomb n Great Britain. The people in reat Britain were accustomed to ghting the old-fashioned type of cendiary bomb. The new bomb ould not be dealt with by the old ethods. It was necessary to teach em the new methods as quickly possible because the bombs ere still falling every night.

A film was made showing the ructure of the new weapon, owing how it could be fought, ow it could be extinguished. The m was made in a week and with- three weeks it had been shown all parts of Great Britain.

Decline Due to Exhaustion

After the war, documentary ms went into something of a deine and I think I know why. The rimary reason was simply and rely exhaustion. The output of ms during the war had been so gh and the number of people ailable to make the films had en so small, that there was a tural reaction. People seemed to ink, too, that the uses of the edium itself had been exhausted. ey reached for Formula A, B, C documentary according to the bject.

Secondly, a rather peculiar thing appened. If you remember, after e war, we had our first Socialist overnment. Now, in spite of the ct that the documentary move-

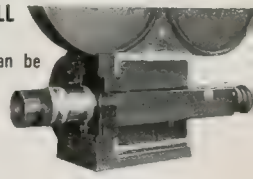
REFLEX EXCLUSIVE* BY CECO

CAMERA EQUIPMENT CO., INC.

NOW ENJOY ALL THE ADVANTAGES OF REFLEX SHOOTING WITH AN EYEMO, MITCHELL OR BELL & HOWELL STANDARD CAMERA

REFLEX SHOOTING of any subject is sure and certain, as every cameraman knows. Because you see the actual image formed by the taking lens itself, there's no doubt about focus, depth of field or freedom from parallax error; and no need to rack-over the camera. Today, after years of intensive research, development and testing, CECO has perfected a unique Optical System* worthy of these fine cameras. Many CECO-converted units have already been tried and proven in major film productions.



ALL CECO CONVERSIONS include a full (silent) film gate aperture and ground glass, and a removable academy (sound) matte in the finder system. A TV frame with center cross is etched on the ground glass. The image viewed is magnified about ten times in the Eyemo — ten and twenty times in the Mitchells and Bell & Howell Model 2709. Under most shooting conditions, no exposure compensation is necessary — yet the image you view is clear and bright even when the lens is stopped down substantially.

For full details on this great new advancement, stop in and see us, if possible — we'll be delighted to discuss it personally. Otherwise, please write us for data, literature, and prices.

EYEMO. If you own this excellen instrument, in its standar 100-ft. capacity, spring-wound form we can convert it to full reflex operation at reason able cost. Or we can supply the entire camera complete with CECO conversion. We can also suppl it equipped for external magazines and motor, a well as the reflex conversion.

MITCHELL 35mm. Standard, Standard Hi Speed or NC, with either single lens without turret, o with 4-lens turret, are all equally adaptable to CECO conversion — the ultimate refinement of superb professional equipment!

BELL & HOWELL 35mm. MODEL 2709 can be equipped with the CECO reflex conversion.

Reflex conversions can also be made to many other cameras.

(CONT'D FROM PRECEDING PAGE)

ment from 1929 to 1939 was carried on almost entirely by people such as myself who were considered left-wing and liberal, we were nurtured and looked after and encouraged by the British Conservatives, the "wicked capitalists."

If there was one thing Socialists did not understand, it was public relations. The caliber of films asked for by the new government became narrow-minded and rather stupid. Moreover, these new Socialist ministers did not know how to cope with the civil service and, in particular, the Treasury.

The Treasury Takes a Hand

Now, the Treasury in Britain viewed with alarm any increases in the amount of money needed for the making of documentary films. From their point of view, these films had cost an inconceivable amount of money during the war, and the Treasury was ready to take its revenge.

So, the Socialist ministers were encouraged to cut out this sort of work, and even when the Conservatives came back to power, the same feeling prevailed and the documentary movement was dealt an almost mortal blow by the abolition of "The Crown Film Unit," an act which even the Conservatives today realize to have been a mistake.

Britain Looks to New Era

So, you have a period in which documentary producers wait for a new generation to spring up. Despite prejudices within the government and even financial governmental attack on the documentary picture, a number of extremely distinguished documentary films are being made in Britain, both through government offices and by interstate commerce.

But it is not the same thing. It hasn't got the same interest, nor is it a true documentary movement with people all working together with similar ideas. Individual units now operate on their own, with little communication with each other.

However, the documentary trend in Britain spread to other territories. It spread to the United States before the war and persisted during the war years. Nearly all the time it was on the basis of the individual unit rather than the centrally organized group. But the British pattern was passed on to Canada during the war and is probably the one place where the original tightly-knit documentary idea still exists.

If you look at the world today,

What Ever Happened to the Documentary?

you'll see wide circulation of film for educational, informational, and instructional purposes.

Aid Under-Developed Lands

The use of films in underdeveloped countries is being more and more recognized as a vitally important factor. In those areas of the world where we have a high incidence of illiteracy, we also have high incidence of disease and of agricultural problems. Film can leap-frog the period between illiteracy and literacy. Film can be understood without being read. All over the world, as you know, experts are going to new countries to help them to set up their own documentary and informational film units.

I regard this as one of the most important things happening today and I'm delighted with its success. A great many people from the United States, I know, are engaged in this type of work.

To conclude, I'd like to say that there has been a change in what is required of documentary film. In the 30's we lived in a world where there were great disparities between the rich and the poor, where the economic situation had broken down. Film exposed these problems, discussed them and got other people to discuss them.

Today, concern about welfare has considerably diminished in my own country. People are better looked after in their youth, and adults better looked after in their old age; conditions of living are better and there is greater prosperity.

So, a great many issues with which documentaries used to be concerned are less important; th dramatic impact is gone.

At the same time, a considerab change has taken place in the ps chological mood of the averag citizen. The background of nucle warfare, and the irritation betwee labor and capital are the types matters today that bring about ps chological maladjustment.

In the Mood of Our Time

So the documentary needs look at the problem of individu psychology in the world toda The new school of British film d rectors, like Tony Richardso Karel Reisz, Jack Clayton, ar Lindsay Anderson, who make film like *Room at the Top, Saturd Night and Sunday Morning, Taste of Honey*, etc., are doing with feature films and actors.

But I still believe that the doc mentary film, made with imagin tion and sympathy about the ind vidual and his problems will rema with us as long as motion pictur exist.

The same philosophy is also a plicable to television. The need f this type of film, the need for i sponsorship, the need for enthus astic crews, directors and techn cians who want to make an im portant contribution will alwa exist and must always be fulfille

L&L "All Out" on Animation for Filmways-Shell Golf Films

• L & L Animation, Inc., Ne York producer's service organiz tion, is participating in an impo tant role in the second series *Wonderful World of Golf*, a Film ways, Inc., production for She Oil.

Having successfully met a rigo ous one-a-week schedule for ele en weeks last year, with art di grams, animation, animatio photography and opticals, L & was again chosen to provide th same services for the new serie which is scheduled to appear NBC in color.

Although the show had an e cellent reception last year, a vi orous campaign is under way make the new one even bette Filmways has assembled a fine a ray of production talent and L & Animation, as well as other ser ices concerned, is going all out improve its contribution. A ne tri-dimensional technique has bee devised to give more realism diagrammatic interludes. The u of this technique plus descripti animation will enable the view to better envision the "course" events along the fairways.

ullen, Training Films, TFI et Cinema Center of New York

Three well-known audio-visual rms in New York have centralled their creative and production cilities to provide a "one-stop" eadquarters for visual communiation requirements. Cullen Assoates, Training Films, Inc., and FI Productions have established he new unit which will function as ae "Cinema Center of New York." Located at 150 West 54th Street, ae new Cinema Center is a comlete building of slide, filmstrip, lotion picture and other presentaon production facilities. At TFI's eadquarters for the past 15 years, udios and offices have been exanded and remodeled for motion icture production as well as other isual communication activities.

In addition to studios for slide and filmstrip creation, the Cinema Center's new motion picture facilities include script conference, projection rooms, editing, and sound equipment, as well as animation cameras.

President of the new Cinema Center is Robert Lightburn, president of Training Films, Inc., and TFI Productions. Vice-president in charge of production is Edward Cullen, who heads the motion picture firm bearing his name. Cullen Associates, Training Films, Inc., and TFI Productions will continue to be owned and operated independently.

Icon Film Corporation a New Management System Subsidiary

☆ A new entrant in the factual film production field is the ICON Film Corporation, 2043 Westcliff Drive, Newport Beach, California. The studio is a subsidiary of Management Systems Corporation, which has bases of operation on the East and West Coast and in Washington, D. C.

President of ICON is Ingvar B. Grimsgaard, formerly on the staff of Management Systems where he produced films under contract to the U. S. Navy. Before joining the company, Grimsgaard was a staff producer in the motion picture unit of the Aeronutronic Division of the Ford Motor Company, supervising film work for the U. S. Army's Shillelagh missile program.

Senior staff producer at ICON is Anthony Gorsline, recently Conference Vice-president for the Industry Film Producers Association. Gorsline, whose experience includes staff positions at Aeronutronic, Douglas, Aerojet-General and other companies, has lensed, written, directed and supervised award-winning films in a wide range of areas.

The new subsidiary is currently on planning and production phases of films for the military, Teaching Systems Corporation and the U. S. Bureau of Mines.

DESIGN IN MOTION

by John Halas and Roger Manvell. Hastings House, 1962. 160 pages, illustrated. $15. In Britain: published by Studio Books (75/-).

Reference Shelf

Our European Editor Reviews a Film Man's "Book of the Year"

To express movement, hundreds of drawings are made; these are three movements from a short, "The Insolent Matador" by Halas & Bachelor.

John Halas, co-author of "Design in Motion" at his boar

This new volume by John Halas and Roger Manvell deserves to be recognized as a major work in motion picture literature. It deals with the animated film, not as a technical book—the same authors supplied that in "The Technique of Film Animation"—nor as a history of the cartoon film.

It is, in fact, the first up-to-date account of contemporary design in one of the most flourishing fields of modern art and for that reason will have considerable appeal for a very wide readership.

From the book we may understand what it is that motivates the creators of animated films, how they deal with their problems and how they are developing the newest of all graphic art forms.

Illustration Is Their Forte

As you turn the pages, it is immediately obvious that the authors are men who "think visually"—in pictures. On all but two of the 160 pages are 300 pictures and over 200 working drawings from 155 contemporary animated films, many of which have not yet been seen in the United States or Britain.

Reading the book is like talking to John Halas in person. One can almost see him chucking photographs down on the table as he discusses his favourite subject—"let me explain this with THAT" and another photograph bangs down—or there's a lightning sketch on the tablecloth to make the point quite clear.

Styles Out of 20 Countries

To show how the combination of graphic art and film-making is shaping up, the authors have drawn on the work of studios all over the world, because in more than twenty countries animators are developing their own individual styles and subjects.

For the first time we can see something of the overall evolution of the animated film, country by country. Today, animation represents the most advanced type of graphic design and use of colour. Styles range from meticulous realism to the abstract—from diagramatic designs in films on science—to the evolving colours of the impressionist.

Throughout the book we can trace the contribution which industry is making towards the development of the art. Discussing a tech nical problem, Halas and Manve say . . .

"Detail can only be absorbed the picture is relatively still. Mov ment and timing affect the style the drawing, texture and coloring —and to make the point Hal slaps down twenty-four color ce from the Ford Motor Company "Peacock" titles for the Tennesse Ernie Show animated by Playhou Pictures.

To explain abstract animatio perhaps the ultimate form of t art, industry supplies the illustr tions—Abe Liss's opening titles General Motors' *Wide Wide Wor* T.V. show.

To see how an animator con poses his picture Halas shows t complete storyboard of 210 dra ings of *For Better or for Worse*, 10-minute cartoon film sponsore by Philips of Eindhoven, Holla which was entered by Holland their national entry in the Intern tional Industrial Film Festival th year.

The influence of the Unite States on the art of film animatio is acknowledged by scores of illu trations from the great Disn films, classic cartoons and fro TV commercials including the ne skip-frame or "pixillated" tec nique.

From Canada we see the wo of Norman McLaren—and rour the world with illustrations fro Brazil, Britain, China, Czechosl vakia, Finland, France, German Holland, Hungary, Italy, Japa Mexico, Poland, Rumania, Russi Spain, Sweden and Yugoslavia.

Perhaps I am prejudiced in fav of animated films? Maybe so—they have been my favorite in mo ies since Felix the Cat—but th who does not enjoy a cartoon. *you* do you must have this book your shelves.

—Robinson P. Ri

How Optical/Effects' Specialists Serve You

"Tool of Producer" Says Harold Schieb of Cinema Research

THE OPTICAL AND SPECIAL EFFECTS house is the *tool* of the producer and is only good if it is used wisely and completely.

Although the business had a simple beginning several years ago, conditions have changed considerably since then. To be competitive, producers have to utilize every phase of optical and special effects services, which today have between $50-200,000 invested in equipment, to build the quality of their pictures. As a result of this need, special effects houses have been researching and developing new techniques on a continuous basis.

Strive for Realistic Ideas

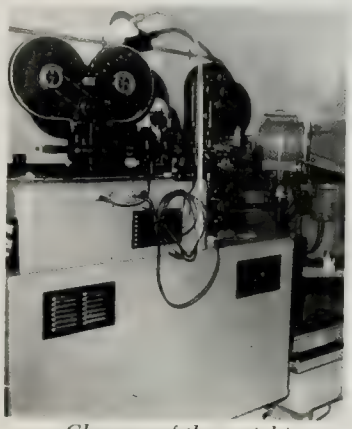
We, at Cinema Research, have been in operation since 1947. Prior to this, while working with Wilding, Inc., I learned the importance of striving for realistic ideas when making industrial motion pictures.

Subsequently, we now have a service which combines Hollywood technique with specialized industrial film requirements. Through the years, we have served such notable producers throughout the country as Audio Productions, Jam Handy, Reid H. Ray Productions, Sutherland Productions and Wilding, Inc.

To best familiarize you with the growing role of today's film effects service, let us analyze various functions and operations at Cinema Research.

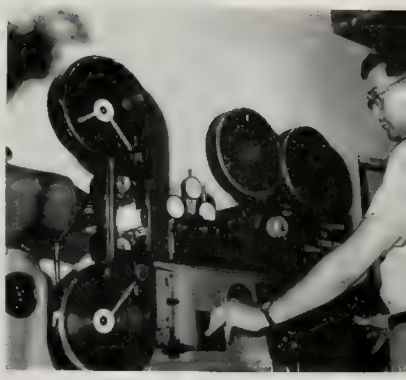
Begin at Story-Board Stage

From the earliest stage of production, we plan story-board conferences which enable us to get closer to the producer in helping him make a better picture. By discussing how and where special effects are to be used with both the writer and producer, we can, in turn, help the producer to save money and also gain the most benefit from the special effects that are utilized.



The writer, also, can plan the script more effectively when he is in on these storyboard conferences. We have too often seen examples of money spent on poor special effects which were not properly planned and had to be salvaged or sometimes redone.

In respect to optical printing, most modern houses have 16mm as well as 35mm, based on the fact that 16mm is now a professional medium. We handle any accommodation of enlargement or reduction whether it be 70mm, 35mm, 16mm or 8mm.



Cinema Research has, in recent years, designed and installed extensive matte equipment for matte shots, miniatures and matte paintings to further aid the producer in making a quality film. Using the traveling film matte, live action foreground is carefully blended with live photography backgrounds on film to produce authentic scenes at low cost. The aerial image matte combines artwork and live action in one photographic operation without the need for a photo film matte.

Extensive work is also done in the field of film correction. To solve the problem of shrinkage, we have devised special film movements and handling processes to permit duplicating brittle, shrunken films onto fresh safety stock.

We handle conversions of film viewing speeds from 16 fps silent to 24 fps sound use as well as varying degree of slowing or speeding of action in research and engineering studios by means of "hold-frame" and "skip-frame" combinations, and blending together of critical study positions.

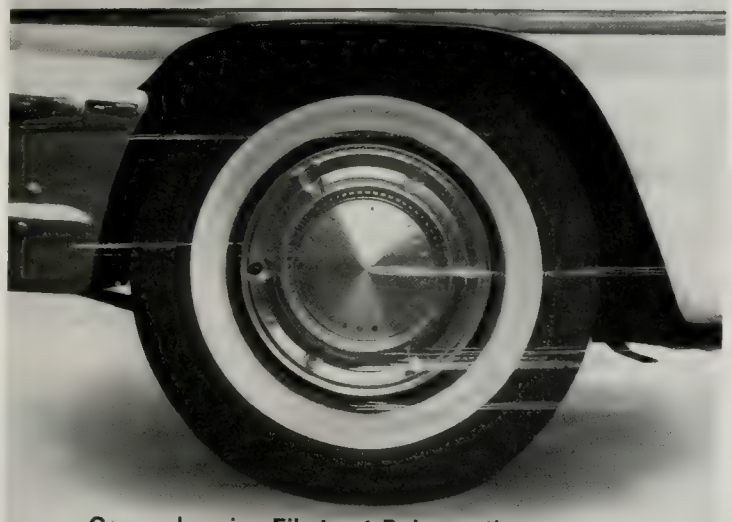
Close-up of the aerial-image camera used by Cinema Research

One of the four Acme optical printers at Cinema Research is pictured in operation above.

Film Changes, Improvements

We do 16mm blowup to 35mm or other size films. Color, gamma and density corrections over and above normal printing ranges are undertaken to correct poorly shot or processed film. Conversions of daytime footage to night effects are performed in both color or black and white. Framelines, dirt in the aperture, and composition are corrected by rephotographing appropriate areas of the original frame to thousandth-of-an-inch exactness. In liquid gate printing, we remove all film scratches and abrasions on the original supplied to us.

Follow-Through into Printing



The job of the optical and special effects house is not finished, however, at this point. We also have the responsibility of following through on the job to make certain that the work is printed properly. We can, from our experience and knowledge of the field, advise the best labs for a particular type of work.

Before giving the film to the lab, we want to be sure that the dupe negative is capable of reproducing a quality print. To keep our producer customers abreast of new processes and techniques, we publish and mail a bi-monthly newsletter report. With the thought that "a better-looking job produces a better-looking product", we hope to enable the producer to obtain more business.

Development to Meet Future

It is apparent that the demand for effects has increased to such an extent that optical and special effects houses have had to maintain a building program of development to meet the increasing needs of the producer.

Get the PRINT MILEAGE You're Entitled To!

Comprehensive Filmtreat Rejuvenation restores motion picture prints gone flat in use to their original, scratch-free brilliance . . . at a fraction of their replacement cost.

Converting Electronic Images into Film for Projection is an Increasing Challenge; Here's How It's Being Met

Improving of Videotape-to-Film Transfer Being Achieved Through Constant Research

MEL SAWELSON is a veteran of the comparatively new process of video tape to film and vice-versa. As Vice President and General Manager of Acme Film Laboratories, he foresaw the future of tape, and guided his Company to its present stature.

Acme was the first film lab to install tape machines and associated equipment — a $500,000 gamble that is paying off since the process became an integral part of the film and TV industries.

Past President of Sports TV

Born in Los Angeles, Sawelson attended USC, where he majored in English. He is a current member of SMPTE, IFPA and is past president of Sports TV, which, under his leadership, became the Nation's No. 1 sports film company to handle exclusive rights to film Big Ten Conference football games.

He won the BILLBOARD award for the All-American Game of the Week. Mel sold out his interest in Sports TV so that he might devote his time exclusively to the lab operation.

"How does a film print look that has been transferred from video tape?" "It looks great; can't tell the difference from "live film", or "it looks bad, just like any other kinescope."

Evaluation of the Problem

This question is being asked more and more frequently with any number of different answers being given, ranging from excellent to bad. Why the difference of opinion? There is no simple answer, but let's take a few moments and evaluate.

Just as the original negative in conventional film determines the quality of the final print, so does the original recording in video tape determine, to great extent, the final outcome of the transfer. It is primarily for this reason that so many poor quality transfers are seen.

Film Makes Permanent Record

Many producers have a taped show, and, after many showings and much tape wear, decide to make a more permanent record of their production by having it transferred to film.

Naturally, the transfer quality is going to suffer because of so much use of the tape before the transfer is actually made. Each time a video tape is played, a small amount of video noise can be introduced. Each successive time the tape is played, a greater amount of video noise is introduced.

Noise Reduces Picture Quality

As a result, with each increased amount of noise, some picture quality is lost. Further, while tape looks satisfactory for tape playback, some producers do not take the special care required at the time of the original recording to insure a good quality film transfer.

On the other hand, a film transfer from a good quality video tape may often be favorably compared to "live" film quality. In these cases, particular care was taken at the time of recording to make the best possible tape for transfer. Lighting control, use of high quality image-orthicon television cameras, and a carefully optimized recording head are all essential.

Many Changes in Past Decade

What is the difference between today's film transfers and the "kinescopes" of ten years ago? The basic procedure is identical — a television film-recording camera photographs the picture which is fed into a picture monitor tube. However, techniques of today's television film recording have changed just as much as the industry itself.

New types of picture tubes are now in use, as well as advanced circuitry design and better recording cameras, plus the benefit of more stringent controls in both recording and laboratory processing.

For example, Acme tested many different types of picture tubes, a total of 77, and phosphori before a decision was reached as to what type of tube would best qualify to give optimum results.

After this extensive research and analysis, two or three type of phosphori were selected and pu into service. In striving to achiev even better results, Acme investi gated the use of a sub-strate tube

Giving dynamic leadership i new field is Mel Sawelso Acme V. P., General Manag

As a result, a manufacturer is cu rently producing such a tube on test basis. Although the tube is i an experimental stage, preliminar results have been outstanding an signify greatly increased quality tape transfers.

Lays Fine-Textured Phosphor

The advantage of this new tub is that a uniformly fine-texture phosphor is deposited on an ultr thin, optically-ground sub-strat glass plate. The ultra-thin sub strate does not allow the formatio of any noticeable halation effec and the suspended strate, with i glass to metal bond acting as heat sync, permits the normall temperature-sensitive phophorus t

PICTURES TELL THE STORY

At top of page: *a close-up of Acme's two Ampex Videotape recorders . . .*

* * *

At left below: *a partial view of the master control console at the Lab.*

* * *

At right below: *a bank of television film recorders. Note the dual picture recorder shown in the foreground.*

operate at a high degree of efficiency.

The phosphor is placed on the optical glass prior to its insertion into the tube. The sub-strate is then inserted into the picture tube, allowing approximately a 1½ inch recession from the actual face of the tube. The image is then reproduced on the phosphorus plate rather than on the actual face of the tube, allowing the camera a flat plane to photograph.

This technique results in a much higher definition of the picture unobtainable in conventional cathode-ray tubes. Although the tube is in an experimental stage, it will undergo further modification as different problems arise, and will eventually be reproduced in numbers.

Search for Quality Endless

In keeping abreast and ahead of the state-of-art, many modifications to equipment and revisions of service techniques are necessary. For example, Acme has four 16mm television film recorders which are constantly undergoing modification and redesign to maintain the optimum in tape transfer quality. No "down time" of the equipment is encountered to hamper any service, and no modification is incorporated until proven.

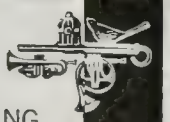
As each television film recorder reaches its peak of perfection in design, these changes are incorporated into the next recorder until all of the fine points are installed. This precision approach is constantly underway in an ever-trying desire to solve the most exacting transfer and processing problems.

Changes in Recording Camera

Acme has also influenced the advancement of television film recording cameras by submitting plans for modifying shutter housings, focal length regulation, and movement and pressure in camera gates. These changes have been incorporated into Vue-Tronic's RK 110 television film recorders which are currently in use at the laboratory.

The RK 110 is a good example of some of the sophisticated equipment incorporating Acme's innovations. It was designed to operate with any closed-circuit TV station. Proprietary design features have provided for maximum kinescope protection; have done away with shutter adjustment, electronic shutters, camera phase generators, etc., so that common shutter bar and picture splice distortion have been completely eliminated.

The recorder was designed by Vue-Tronics, Inc. in close co-ordination with Acme engineers and laboratory personnel. Acme and Vue-Tronics are currently engaged in the revolutionary development of a dual picture television film recorder that will permit maximum flexibility by merely shifting the camera by unique rack-over mount.



Also Transfer into 35mm

In addition to the four 16mm television film recorders and two Ampex video tape recorders, a 35mm service is also available for transferring only. The identical techniques utilized for 16mm services are used for the 35mm. A new RCA PR 32 optical sound recorder is also a part of this unique complex to give complete transfer and processing services under one roof.

The versatility and quality of these services and equipment are currently solving many problems for the industry. One such example is the transferring of MCA's International Showtime video tapes to film for distribution throughout the world. There were many problems involved in furnishing video tape for the foreign market, and the only solution was a high-quality tape to film transfer. Acme was the only lab that had this capability to provide the service.

WRS WARREN R. SMITH INCORPORATED

210 SEMPLE STREET, PITTSBURGH 13, PA. • MUSEUM 3-6300

IAVA FALL MEETING AT WEST POINT:

IAVA President Jim Craig took active role in the sessions

(CONTINUED FROM PAGE 60)

cials on the Kraft television programs.

Bill Davis, Nationwide Insurance Co., thought AV men should do more as an avocation to advance audio-visual techniques, not only in their own companies, but among outside groups. He demonstrated new overhead projector techniques used in his work, and a wireless microphone.

Roy Mumma, U. S. Steel Corp (ret.), Technical Chairman of I.A.V.A., made his report in the form of a slide presentation showing the industrial audio-visual activity at the Seattle World's Fair this year.

Reports on Training Center

D. G. Treichler, Socony Mobil Oil Co., gave a progress report on the use of the training center at Socony Mobil headquarters in New York. Management has utilized more and more audio-visual facilities each year since the center was opened five years ago.

Dan Rochford, Standard Oil Co., (NJ), led an off-the-record case history discussion on the use of audio-visuals in solving management crises in consumer, employee and stockholder relations.

Speaking at the Annual Fall Banquet, W. R. McHargue (Vice-president, ret. E. R. Squibb & Sons) urged IAVA men to challenge their most cherished assumptions. He said new doctrines will be found by the men who "don't know that they know."

Challenge of Overseas Trade

The final day's activities opened with a report from Europe by Robinson P. Rigg, of the LONDON FINANCIAL TIMES, and European Editor of BUSINESS SCREEN. He urged American audio-visual men to prepare to communicate more and more with the nations of Europe as trade with the common market and "outer-seven" countries continues to increase.

W. B. Reynolds, Ohio Bell Telephone Co., told about the 250 speakers from all departments of his company who gave 5,000 talks to 250,000 people in Ohio last year.

J. T. McGarry, Wyeth Laboratories, demonstrated administrative forms which have been effective in his company's audio-visual department.

Willis Pratt, American Telephone & Telegraph Co., described testing procedures recently made on a film designed to recruit teenage girls for telephone work. Roy Vanderford, also of AT&T, showed ways of overcoming production problems in motion pictures by careful advance preparation.

Under the guidance of D. G. Treichler, Socony Mobil Oil Co., the audio-visual equipment and operations were most ably handled by John F. Prince, assisted by John Fredericks, both of John J. Tobler, Inc., audio-visual service.

Banquet address was given by W. R. McHargue who urged "challenge of accepted ideas"

75 Programs Now Available of "The Twentieth Century"

☆ Seventy-five programs from the prize-winning CBS television series *The Twentieth Century*, are now available on a free-loan basis to clubs, churches, industries and other community organizations through the facilities of Association Films, Inc.

This film distribution program, the largest of its kind in the world, is sponsored by the Prudential Insurance Company of America. The company also sponsors the series on television.

21 Million Have Seen Films

Distribution of 16mm sound prints of selected programs from *The Twentieth Century* began in January, 1958, a few months after the series made its TV debut. Since its inception almost 21,000,000 persons have viewed the films in clubs, classrooms, auditoriums and other community meeting places. There have been more than 370,000 individual film showings. Biographies, World War II subjects and films on space, communism and sports are among the most popular.

To cope with the ever-growing demand, Prudential has increased the number of prints of those films that are most frequently requested.

New Series Within 6 Weeks

In addition to the films now in distribution, prints of new *Twentieth Century* programs, scheduled to go on the air in late October will become available approximately six weeks after their air date.

The Twentieth Century has received many national and international awards, probably more than any other public affairs series on television. Individual programs have received citations from Freedoms Foundation, Look Magazine, American Film Festival, Columbus (Ohio) Film Festival, the Department of Defense, and the Academy of Television Arts and Sciences (two Emmy awards).

The series is narrated by Walter Cronkite and produced by Burton Benjamin and Isaac Kleinerman for the Public Affairs Department of CBS News.

How to Book These Programs

Films may be requested through local Prudential agents, the company's headquarters in Newark, N.J., or Association Films, 347 Madison Avenue, New York.

YOU GET WORLDWIDE COVERAGE OF FILMS IN BUSINESS SCREEN

s Your Film a "Worse for Wear" Salesman?

Techniques of Film Rejuvenation, Vital to Hollywood and to Television, Also Important in Business Films

A Men's Wear Store recently conducted a survey to discover whether the freshness and natness of a salesman's appearce have a direct bearing on the ception accorded him. The reses clearly indicated that a shabsalesman registers an immedely unfavorable impression on s prospect.

When it comes to motion picre film, we find the same probin. The objective of the film is create a favorable impression r the ideas, the product, the lpfulness of the sponsor. Yet, a otion picture print, once in use, sily acquires a shabby appearce.

Blemished Film Loses Punch

The production may be excelt and the prints turned out by e laboratory perfect, but in the urse of handling and projection, ch print encounters various hazds that inevitably result in ratches and abrasion marks hich mar the projected image of e film. These blemishes, like a ppily dressed salesman, lessen e effectiveness of the film presitation.

An increasing number of indusal sponsors are becoming conious of the scratch problem and e asking what can be done about i The answer is: A great deal.

Film Is Receptive to Damage

The nature of the photographic mulsion, and likewise of the base, ake them receptive media for acmulation of scratches and dirt. print is called "dirty" when it ows fingerprints, oil spots, and bating matter attracted by static handling a projection.

Film can be treated to increase sistance to scratches and dirt. However, no film can be made scratch-*proof*. Scratches and abrasions will appear in a short time under normal use. When film is scratched during the first run—as freqently occurs—subsequent use of the film will make these scratches more and more apparent. The accumulation of dirt and scratches creates additional abrasions during the projection and rewinding of a film.

Cost Fraction of Replacement

Rejuvenating a print—removing scratches and restoring its original brilliant photographic quality—costs only a fraction of its replacement. It is not, however, a do-it-yourself proposition. It requires specialized work by professional technicians. Effective rejuvenation involves a sequence of chemical treatments that cause the scratches on both the emulsion and the base to mend, much as a cut on a person's hand would heal. Cut-through emulsion scratches that have removed the entire photographic image cannot be eliminated.

Film rejuvenation was originated by European motion picture laboratory engineers and was introduced in the United States in 1930.

This process immediately proved to be a life-saver for Hollywood producers. At that time, domestic exhibition prints were always made from the original negatives which became badly scratched before many prints had been made. Rejuvenation changed that situation providing an unlimited number of top-quality prints from the original negative.

Hollywood producers and distributors, and more recently the television syndicators, have found another money-making use for film rejuvenation.

By the restoration of used release prints for reissues and foreign distribution, new revenues are obtained from additional markets without increasing new print costs. Rejuvenated prints are seen on the screens of many first-run theatres.

Sponsors Are Now Attentive

Having established itself as a boon to the quality minded Hollywood producers, rejuvenation is now receiving the attention of industrial film sponsors, intent on deriving full value and quality from their investment in motion picture films.

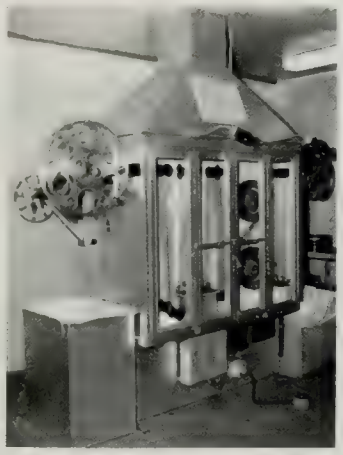
The aim of the industrial sponsor differs from the theatrical producer in one important aspect. The industrial film is often intended for a limited, but very select audience. Extending the life of a business film is *not* a major problem. The reward: *confidence* on the part of the sponsor that each showing of his film retains all the crisp, sparkling value of the original.

Rejuvenation, when executed by expert technicians, supplies this confidence. As one film department head put it: "*It costs so little . . . it saves so much!*"

* * *

Showmanship: a *Constant* Goal

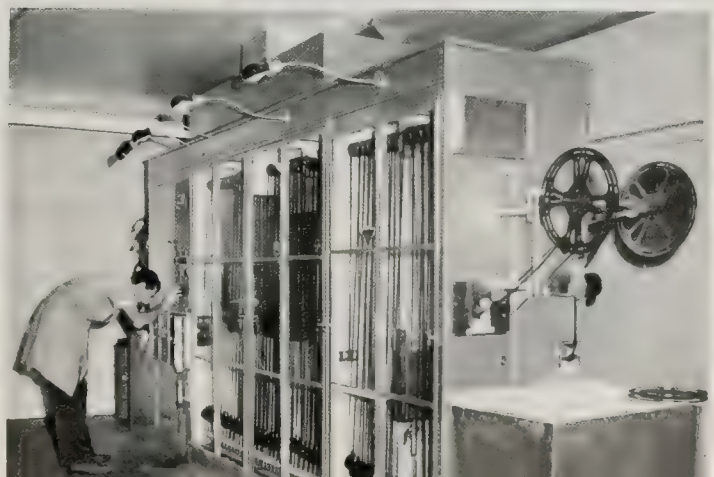
☆ We refer our readers to page 77 of this issue where some of the nation's foremost service organizations in the field of film rejuvenation are listed.



Nothing counts more than perfection on the screen when the sponsored film reaches its intended audience! Only through *constant* print vigilance, maintained by the distributor, can film results be *assured* for the sponsor.

Selecting film from inventory of rejuvenated prints for a TV station shipment (Rapid).

onstant print checks insure ratch removal. (Photo from apid Film Technique.)



Second: *rejuvenation begins with thorough cleaning via a three-stage process; ultrasonic cleaning is last step.*

First step: *before treatment, every print is inspected by a skilled technician to assure that film can be restored to showing perfection. (Photos by Comprehensive Filmtreat, Inc.)*

Third step: *impregnation of film by chemicals which mend scratches, remove abrasion marks. Each side of film is treated separately. Emulsion layers are partly liquified to facilitate healing action. Film is then seasoned by impinged air; given protective treatment.*

BUSINESS SCREEN EXECUTIVE

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

—Mitchell's Charles Austin

Charles Austin in Marketing Post at Mitchell Camera

☆ Charles Austin has been appointed Marketing Manager for Mitchell Camera Corporation, Glendale, Calif., according to B. G. Tubbs, Vice-President.

Austin has been associated with Mitchell for the past dozen years, and has been an active cinematographer for over 10 years. For the past two years he has been President of #644 Cinematographers, IATSE. He holds active membership in the Society of Motion Picture & Television Engineers, Society of Photographic & Instrumentation Engineers, Academy of Motion Picture Arts & Sciences, Academy of TV Arts & Sciences, the Air Force Association, and the British Kinomatograph Society.

During World War II he served in both the Signal Corps and the Air Force, doing both documentary and aerial reconnaissance work.

In his new marketing role, Austin will be administrator of sales and marketing, with the goal of bringing to the cinematographer and film technician the most advanced and finest quality motion picture equipment.

Glenn Cota Is Vice-President of Manufacturing at Radiant

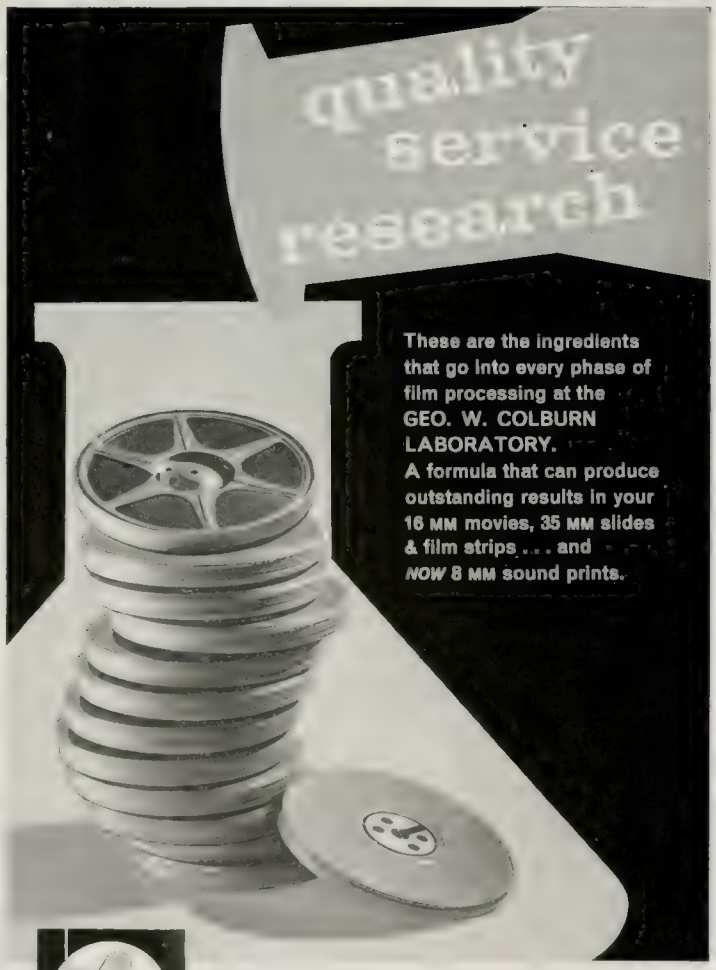
☆ Glenn L. Cota has been appointed manufacturing vice-president of Radiant Manufacturing Corp., Morton Grove, Ill. Adolph M. Wertheimer, president of the projection screen manufacturing firm, announced the appointment last month.

Since joining Radiant in 1961 as chief industrial engineer, Cota has been instrumental in establishing new quality systems and completing the company's automation program.

Shirley Hartman to Animation, Inc. as Administrative Head

☆ Earl Klein, president of Animation, Inc., has announced the appointment of Shirley Hartman as administrative head of the studio.

Miss Hartman brings with her an extensive background of animation and live-action production, having recently resigned as production coordinator at Parthenon Pictures. She was formerly personal assistant to Kirk Douglas during the filming of *Spartacus*, and also was affiliated for four years with Walt Disney Productions.



Animation, Inc., one of the most active animation studios, headquartered in Hollywood with branch offices in New York, Detroit, and Chicago, recently enlarged their production facilities to include live-action TV commercials, business and industrial films, and slidefilms.

In addition to her administration duties, Miss Hartman will also function as coordinator of sales, publicity and certain creative services.

* * *

Jack Moss in New Quarters

☆ Jack I. Moss, Inc., has moved to larger quarters, with projection facilities, at 19 West 46th Street, New York. The company offers a scriptwriting service to producers of industrial and educational slide films and motion pictures, and to companies with in-plant production facilities.

—Calvin's Lee Davis

Calvin Production Appoints Lee Davis to Vice-Presidency

☆ Lee Davis has been named vice president at Calvin Production Inc., of Kansas City. His appointment, effective October 1st, was announced by president Leonard Keck. Davis will head the company's newly-created Marketing Division.

Previously general manager of the firm which he joined in June 1958 as a director in Production Services, Davis subsequently held assignments as a writer-director and as manager of University Films, educational film production unit of Calvin. He is a graduate of Baker University with law school training at Southern Methodist University. His motion picture experience began while on active duty in the Navy.

* * *

Mary Dooling to Hollywood; Joins Ray Sackheim Agency

☆ Mary G. Dooling, an experienced personal manager from New York, has joined the Ray Sackheim Agency in Hollywood as an associate. Miss Dooling will specialize in building a select clientele for radio and television commercials and for industrial, educational and documentary pictures.

Previously director of Talent Inc. in Chicago, Miss Dooling has served major business film companies. Through that talent agency she helped to develop many prominent television announcers and product spokesmen.

Spangler Heads Niles Program

☆ The recently-organized Program Department of Fred Niles Communications Centers of Hollywood, Chicago and New York is headed by Larry G. Spangler. Spangler has been appointed supervisor of radio and television programs by company president Fred Niles.

THIRD INTERNATIONAL FILM FESTIVAL:

or consideration and recommendation to industrial sponsors who wish to make films for school audiences.

German Member of Inforfilm Reports 300,000 Showings

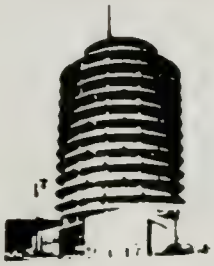
The second discussion was arranged by the Konferenz der Landesfilmdienste which is equivalent to the State Film Libraries in America. The Konferenz is the German member of Inforfilm, the international association of distributors of which Modern Talking Picture Service is the U.S. member.

Speaking for the Konferenz, Landrat Schwan of Bad Godesberg reported that there were twelve libraries in membership holding 800 titles of which there were 25,000 copies. Last year more than 300,000 showings had taken place in Germany which represents the most extensive non-theatrical distribution of films on the continent of Europe (excluding Britain) "from the prisons in Bavaria to the ships off Schleswig-Holstein!"

Ken Lockhart-Smith, chairman of the Film Producers Guild of London and of Sound Services Ltd., a British member, reported that Inforfilm had members in Belgium, Canada, Denmark, France, Germany, Great Britain, Netherlands, Sweden, Switzerland and U.S.A.

After two years of discussion, agreements on mutual distribution of films from the member nations had been reached and a full description was contained in a brochure "International Information Film Service", printed in English, French and German, which was available on request from the secretary, Jan Botermans, Inforfilm, 47 Avenue de l'Hippodrome, Brussels 5, Belgium, or from the national member organizations.

Luncheon Honors Festival Films Lensed in Agfacolor



Germany's largest film stock manufacturer, Agfa, was host at a luncheon at which it was announced that five of the competing films were shot in Agfacolor; the in-plant films *Partnerschaft* (Siemens) and *Moltopren* (Farbenfabriken Bayer), award winner in category , and the outside productions *Stahlerzeugung nach Kaldo Verfahren* made by H.G.P. Films of Berlin for Demag AG of Duisberg, *Kommunikationen* made by Edgar Reitz for the German Post Office and *Neues Werkzeug* (Unda-Film for I.B.M.).

At the awards' ceremonies, West Berlin's mayor, Willi Brandt, commented on the power of film to help people understand each other and their problems, he referred to the faith in the free world of the two million West Berliners isolated in an island city 100 miles behind the Communist Iron Curtain and said that West Berlin would be happy to assist in any co-production sponsored by the industries of the democracies.

The awards were presented by Dr. Paulssen, president of the German Employers Confederation and Rene Arnaud, secretary general of the Council of European Federations of Industry, who presented the Grand Prix to Snr. G. Guiglia of the Italian Confederation of Industries who accepted the prize on behalf of the Italian nation.

deterrents to ready understanding are avoided.

Custom is a parallel to language. "American ways" may prove interesting to people in other countries, as they'd be viewed by a tourist. Some of them are not acceptable within the framework of custom and tradition of the country. Some American actions may be offensive, however innocent of intent, when it is suggested they have application for those in a foreign audience, even when it is sophisticated.

Three Approaches to Problem

For those who want to adapt films for use abroad, there are three ways of meeting the language problem. The first is the imposition of translated titles, ignoring the sound track completely. There have been enough U. S. entertainment films handled in this way to make this a permissible method, but it's a method which doesn't do the best possible job.

The second way is a careless track translation. Those who have seen the reverse of the situation — films made abroad and shown in this country — doubtless have been aware of dialogue from closed-mouthed people on the screen, and of actors mouthing silently while the track says nothing.

This can be funny to a perceptive audience — and most audiences, wherever they are, are perceptive. But the humor is comic, ludicrous, and it hardly creates a serious interest or an understanding receptiveness which certainly are needed by a sponsor.

Careful Dubbing Is Best Way

The third way is careful dubbing. While there are other capable firms who follow similar practices, the methods used by Foreign Language and Cinema Service are best known to us because we have developed and tested and used them over a long period. As your guide to dubbing, let us examine this method.

Where live sound has been used and lip synchronization is involved, the first step is comparison. The film to be dubbed is examined and compared frame for frame with the negative provided for that purpose. This insures that print and negative are identical. It is important because often alterations are made after a film has been finished. At this point a new negative and new prints are also made. Unwittingly, if the print from one negative and the altered negative should be provided — and it has actually happened — the results can be disastrous.

It Begins With Translation

With this done, the next step, and the first one for a film with narration, is translation. Expert translators are employed. They are and must be masters of both English and the foreign language involved. Making the qualification even higher, scripts involving any technical and or scientific subjects require thorough knowledge of the subject matter and of the equivalent terms in the particular foreign language involved.

With script in hand, a comparison of it is made with the speech track of the film to be dubbed. If any alterations have been made in the film, the script is corrected. In the rare instances where no script is available, one is made from the track itself.

At the same time, notes are made on any scene or speech situations which might fail to register with the intended new audience, or which could create unintended and unwanted resistance to the message of the film. These will get special attention, and recommendation will be given the producer and sponsor for minor cuts or verbal bridges, avoiding the need for remaking portions of the picture.

After this, the script is translated.

Translation of any material from English to most foreign languages requires more — and often longer — words. To synchronize it with the time-space and objects screened, the next stage must be adaptation. For narration films, the editing process is relatively simple. Two or more experts work on the translated material to find substitute words and expressions to convey the same meanings and ideas faithfully, within the limits imposed by the scenes on the screen.

Lip-Synchronization Complex

Adaptation of the film involving lip-synchronization is somewhat more complex. First, the syllables in each word and in each sentence of the English script are counted and noted. Careful note is made of the "opening" lip movement with which the first word in each sentence is uttered.

Next, the time consumed in uttering each sentence is measured to the split second. If dialogue or multiple conversation are involved, careful note is taken of the sex, type of personality, type of voice, inflections, pauses, laughs or chuckles, sounds and gestures of each of the actors in the film. This is essential if the sense of reality provided for American audiences is to be carried over to the new audience.

Edited Sentence-by-Sentence

Finally, the translated material is edited, sentence by sentence, to measure exactly the number of syllables for each sentence as in the original, and to contain every one of the characteristics on which the notes have been made.

With lip-synchronization work the print is cut into 30-foot lengths. These are looped and cued. The translated-adapted material, representing the speech track in each of the loops, is printed with white ink on strips and looped. These are projected at the top of the screen in synchronization with the looped film.

Rehearsal comes next. For the narration film, a narrator with the right voice is cast, and with the projector in use, he is rehearsed in the new language for pitch, diction, and speed of delivery to synchronize with the narration of the original.

With the lip-synch picture, the synchronized looped film and the print-written strip are projected with the sound track turned down — though for guidance both the director and those providing the new voices can hear it through ear phones. Each loop is run continuously and the narrators speak the lines assigned to them.

ELEKTRA STUDIOS *Inc.*

33 WEST 46TH STREET • NEW YORK 36, N. Y.

JUdson 2-3606

When the director is satisfied that they are able to begin, speak, and end their assigned sentences in synchronization with the lip movements of the actors on the screen and with time, space, and object requirements, recording begins. This is done on ¼" magnetic tape, with several takes made under guidance of the director in the control room who provides pre-arranged signals.

To assure proper recording and to check for retakes needed for parts which may either exceed or fall short of the time-space-object requirements, the takes are played back.

Transfer to 35mm for Editing

OK takes are spliced and transferred to 35mm film for editing. The track is cut to synchronize with the film by an editor with knowledge of the foreign language, or with the assistance of one of the foreign language experts.

If the original film is 16mm or it is to be used abroad in that gauge, the track is transferred to 35mm, the new negative is developed, prints are ordered, and the picture is ready to begin its useful work in another land for a new audience and a new market.

One of the collateral services of Foreign Language & Cinema Service is the translation of literature which is part of the program using the film. Millions of dollars are spent each year in printed material for use overseas and many firms have found — sometimes too late — that they are misunderstood, the butt of ridicule and uncomplimentary jokes, in the markets of the world because of faulty, literal and inexpert translations.

Offer Overseas Market Data

Another service of importance to many who seek foreign markets is provision of information on the markets themselves. This will range from importance of the country as a potential consumer of the sponsor's product, characteristics of the people and of the industries concerned, population, sources of the nation's wealth, its income, general conditions concurrently prevailing there.

Yet another of the services, often of considerable value to the sponsor, is suggestion on distribution channels for films within the areas of the sponsor's interest. All these things round out a marketing "package" which simplifies and makes more successful any firm's entry into or expansion within the challenging and profitable field of foreign trade.

Styles to Direct Midwestern Sales for California Studios

☆ Hal Styles has been appointed Midwest Sales Manager for a group of four Hollywood production studios which, collectively, represent a wide range of production techniques. The companies: Jerry Fairbanks Productions of California, live action producer; Pacific Title & Art Studio, filmed animation; Hollywood Animators, a producer specializing in paper cut-out and paper sculpture technique; and International Video Tape, Inc., an independent video tape recording studio.

Although a native Californian, Styles is no new-comer to the Midwest, having previously made frequent visits to the area as national sales manager for other California companies. His background covers thirteen years' experience in both the agency field and in film production.

With headquarters in Chicago at 670 North Michigan Avenue, Styles will be responsible for client relations in the states of Missouri, Illinois, Wisconsin, Minnesota, Michigan, Indiana, Ohio, and Pennsylvania.

a new portable movie light; a multi-purpose industrial camera

Power Cinema Light With a Power Pack Announced by GE

☆ A portable movie light weighing only eight and a half pounds with its rechargeable power pack has been announced by the General Electric Company's Lamp Department.

Called the "Portable Cinema Light," the unit consists of a nickel-cadmium battery pack (rechargeable in about 60 minutes) and a high intensity, sealed beam lamp. The cost will be less than $125.

The guide number of the GE Portable Cinema Light is 20 with ASA film 40. TV news photographers and others using ASA 160 b/w film can use a guide number of 40.

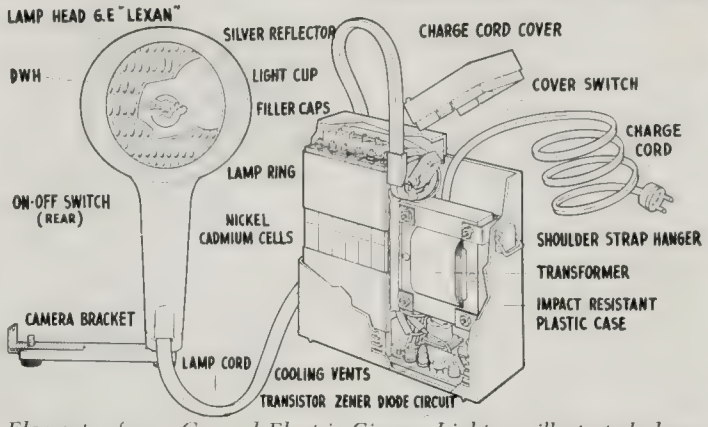
6,500 Candlepower Light

Cinema Lights are equipped with a wide-angle, 3400K, 6500 candlepower light source, the DWH lamp. Two other lamps are available as accessories. One, the DWJ, is designed primarily for "normal" lenses. The other, the DWG, is designed for telephoto lenses. Accessory lamps are easily interchanged.

Two major innovations in lamp manufacture make possible Cinema Light's small size, according to Lester W. Dettman, Manager of Marketing of the GE Photo Lamp Department.

Silver has been used as a reflector for the first time on a PAR 36 lamp. The use of silver increases the efficiency of the lamp by 10 per cent over conventional sealed beam lamps.

Has Light-Collecting Cup



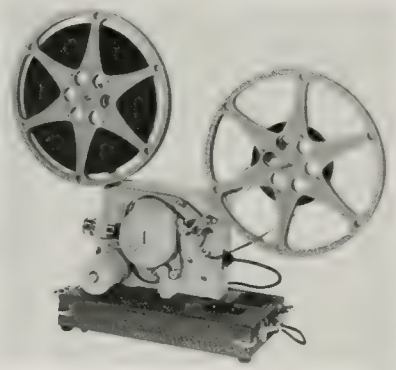
GE engineers designed a light-collecting "cup" in front of the filament that catches what normally would be wasted light and puts it back into the beam. This improvement increases useable light by about a third.

Without these improvements, the compact battery pack (2-1/2" by 6-1/2" by 6-1/2") would have to be nearly a third heavier than it is, Dettman said.

The battery is recharged by plugging it into household current with a cord contained in the battery pack itself. The lamp glows faintly as the unit charges.

A transistor circuit turns off the charger when the battery is fully charged and the glowing lamp turns off. No harm is done if the unit is left plugged in, however. Cinema Light will hold its charge for a month or more.

It is easy to tell if the unit is charged after a period of disuse



Elements of new General Electric Cinema Light are illustrated above.

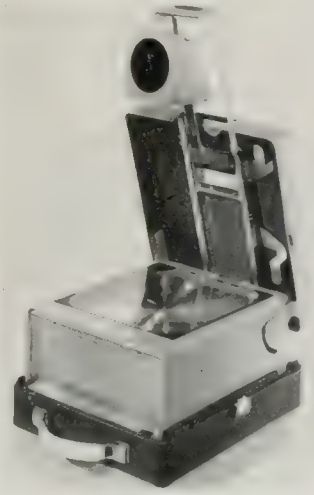
two projectors for overheads; viewtape and production tools

New 3M Overhead Projector Features Portability, Versatility



☆ A new overhead projector designed to serve as a versatile, low-cost personal presentation system has been announced by Minnesota Mining and Manufacturing Company.

Incorporating new concepts in optical design, the company said the new device fits into a self-contained carrying case the size of a portable typewriter, yet retains all the major features of the largest-size models.

Called Thermo-Fax model 60 Portable Overhead Projector, it may be used in fully lighted rooms and is tailored to the needs of persons on the go who want to communicate ideas and facts in a concise, easy-to-understand manner.

The new projector features a controllable tilt head which permits easy positioning for unobstructed viewing, yet leaves the projection table horizontal at all times for comfortable operation.

Weighing 19½ pounds, the unit has an F3.5 lens and a 10 by 10 inch projection table. Dimensions

— 3M's Overhead Projector

are 14 by 14½ by 7⅜ inches encased. It opens out to 14 by 14½ by 9 inches and measures 27 inches to the top of the projection head. For additional data, write for New Product # 1, BUSINESS SCREEN, 7064 N. Sheridan, Chicago 26, Ill.

Slides Can Be Titled in Seconds with Viewlex's Slide Scriber

☆ Slides can be titled in just seconds with the new Slide Scriber introduced by Viewlex, Inc.

This product permits the slide shooter to title every one of his slides, in his own handwriting, or with precise lettering guides, directly on each slide.

Just as easily as you write your name, you inscribe a title beneath every one of your slides (the transparency itself is untouched). And when slides are projected, titles are projected, too.

The Slide Scriber is a boon to industrial, sales, educational, religious and medical slide users, the

— Viewlex' Slide Scriber

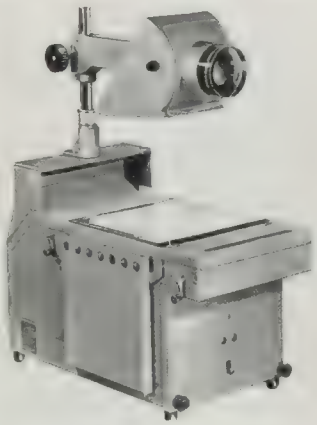
manufacturer believes. For additional data, write for New Product # 2; BUSINESS SCREEN, 7064 N. Sheridan, Chicago 26, Ill.

Portable Viewtape is Fully Automatic for Sight-Sound Presentation

Viewtape is a fully-automatic sight-sound presentation unit made by Viewlex, Inc. This portable unit utilizes 35mm filmstrip projection synchronized to dual track magnetic tape sound, with the entire program operating automatically from start to finish.

Large, bright, built-in screen permits desk top viewing by one or a group in a fully lighted room. Compact attache case design and light weight construction makes it easy to carry.

The tape reproducer unit pulls out drawer-style. A large 8 by 10 inch viewing area moves into po-



— The portable Viewtape

sition automatically as case is opened. Carrying case is 15 inches long, 15 inches wide and 6 inches high. Weight of the unit is 21 pounds. For additional data, check New Product # 3; BUSINESS SCREEN, 7064 N. Sheridan, Chicago 26, Ill.

New Vu-Graph Overhead Projector Features Tilt-a-Matic Lens

☆ Popularity of the low-silhouette overhead projector has steadily increased. Users have found one disadvantage — to raise the projection image they must tilt the projector. Often, this makes it difficult to write or work with transparencies and actual experiments on the projection stage.

This problem has been solved by the new Beseler Vu-Graph 7750th, a low silhouette overhead projector. Featuring a tilting lens design, it offers all the advantages of the low silhouette; yet it enables the user to raise the projection image up to 19 degrees, without raising the projector head or projector base.

— New Beseler Vu-Graph

To raise the projection image, the user simply turns a knob on the side of the projector head. Just the lens assembly is raised, and by coupling the lens to the mirror, the proper optical relationship is maintained. For additional data, check New Product # 4, c/o BUSINESS SCREEN, 7064 N. Sheridan, Chicago 26, Ill.

Nagra Unit is Self-Contained Professional Tape Recorder

☆ Nagra III B is the new self-contained professional tape recorder made by Kudelski, Paudex-Lausanne, Switzerland. The unit's motor and amplifiers can run from self-contained cells or batteries, or with suitable accessories, off the mains or vehicle batteries.

Nagra III B has three tape speeds. The speed can be changed by a selector switch on the left of the apparatus. Every detail has been carefully designed to make the unit as easy to use as possible — with emphasis on silent running.

The manufacturer says the apparatus has wide possibilities and can be considered as a proper studio in miniature. For additional data, write for New Product # 5, BUSINESS SCREEN, 7064 N. Sheridan, Chicago 26, Ill.

— Nagra III B Recorder

New Porta-Dolly is Sturdy, Compact and Completely Portable

☆ New on the market is a porta-dolly developed by Countryman-Klang Film Productions in Minneapolis.

Designed by Tom Countryman to fill the need for a dolly that is sturdy, completely portable and small enough to fit into a compact station wagon, the porta-dolly has a 360 degree boom.

It is constructed on the same principles as a racing car, with emphasis on light-weight materials properly stressed. The only casting in the entire unit is the aluminum plate where the camera head

Modified 16mm Projector Fills Need for Photo-Optics Analysis

A 16mm projector adaptation utilizing an exclusive electro-optical design for flickerless projection at speeds from "still" to 24 frames per second has been announced by L-W Photo, Inc., Van Nuys, California. The model, 224 Photo-Optical Data & Analyser, has full

Model 224 Photo-Optical Data-Analyser Projector

remote control of forward, reverse, single-frame projection and frame speeds of 2, 4, 6, 8, 16 and 24 fps.

Constant-speed motor-driven blower and heat filtering system was designed to prevent film damage, even during prolonged single-frame projection. A daylight projection viewer is built into the case, utilizing a special front-surface mirror and a "black" translucent screen for desk top viewing. A 5-digit (add and subtract) frame counter is incorporated. Check NP # 7 for additional data.

New Product Simplifies Cleaning

☆ A new product called "Clean Tips" solves the problem of cleaning and oiling normally inaccesible areas in electronic and mechanical equipment. Made by Robins Industries Corp., Flushing 66, N. Y., the new item can also be used in workshops. The kit consists of slender wooden shafts tipped with cotton. Price is 75 cents for a package of 100 swabs.

* * *

Fireball Reflector Offers New Slant for Outdoor Illumination

A new approach to outdoor reflector lighting techniques — Ralph Hoge's Fireball Reflector — is now being offered for sale by Florman & Babb, Inc. New York.

The Fireball is fabricated of tv pressed aluminum sheets bond to plastic materials and joined t gether at all four sides. The te ture of the aluminum is form by pressing with lenticular di which form a myriad of ti prisms and magnifies the ligh gathering power of the reflector

The envelope formed by t two joined reflectors is suspend from the frame and an air val is tapped into one side. By pum ing air into the envelope, the r flectors will "belly-out," resulti in diffusion and spreading of t reflected light beam. As a resu the beam can be focussed and co trolled by the volume of air ju like a spotlight.

The Fireball reflector surfa can be easily washed and polishe and it is said to be lighter, steadi and brighter than conventional r flectors. It is priced at $250 at & B.

Public Service Films' TV Status Improved

THE STATUS of the public relations public service film on television has been much improved since Federal Communications Commission ground rules on the subject have taken effect. Local stations that formerly might have broadcast public service films with credits snipped out are now careful to leave them in. The stations have found, as well, that these "sponsor" credits are entirely acceptable to audiences, in fact, even enhance the prestige of the film as good programming material.

Judy Dupuy, editor of the recently reissued "TV 'Free Film' Source Book", reports that recent surveys of the Broadcast Information Bureau, which publishes the Source Book, show that the present high quality of public relations films make them most valuable to stations for filling required public service time.

"Straight Sell" Doesn't Sell

Miss Dupuy reports that industry has recognized the fact that "straight sell" in public service film doesn't sell, and that industry now takes the public service route of getting across its story. "Where this film is well programmed," states Miss Dupuy, "it has a rating story that is frequently better than live public service presentations produced locally because there's so much more money spent on it."

4,485 titles are indexed and cross-indexed in the Source Book, with over 100 of the titles being series of 13 or more programs. There are 900 new titles in the 532 page volume, with 14 being hour films, 292 being half-hours, 465 being quarter-hours, and 129 being ten minutes or less.

Over 60% Are Color Films

Over 60% of all public relations titles listed are in color, with most new films being shot in color, although many firms make b/w prints for TV release. 1,227 advertisers are using the TV public service film medium currently according to this compilation.

The "TV 'Free Film' Source Book", one of the film availabilities service to stations and advertisers, is published by the Broadcast Information Bureau, 535 Fifth Avenue, New York, and costs $20 per copy.

Plans in Work for Portman Animation Seminar in April

☆ Plans are being made to expand next year's Portman Animation Seminar & Workshop from three to four days. Participants at this year's meeting held at Grossingers' Country Club felt that too much information and discussion was packed into the three day session.

Attended by 80 key motion picture personnel from industry, government and educational institutions, this year's seminar featured the following speakers: Ken Drake, Training Films, Inc., who spoke on overall animation department projection flow; Maurice Levy, Eastern Effects; Don Capano, S. O. S. Photo-Cine-Optics, Inc.; Bob Tinfo, Tinfo Technical Animation; Nat Bukar and Dave Sage, Sage, Bukar & Larisch; Warren Portman, Photo-Animation.

The Seminar next year will be held at Grossingers' from April 22nd through April 25th, 1963. Program and registration forms are available from Jean Cramer, Photo-Animation, Inc., 34 South West St., Mount Vernon, N. Y.

Definition of an Architect

A Good New Picture Shows Creative Role

SPONSOR: Pittsburgh Plate Glass Company.
TITLE: *An Architect at Work*, 28 min, color, produced by Dynamic Films, Inc.

☆ In the past decade, the face of America has changed more radically than in any other comparable period of history. Levelling the old and outworn, creating the new and efficient, this sweeping change in our public buildings, in our schools, churches, factories and office buildings has been brought about by architects — gifted men who have searched for truth and given it form.

This is the message of a new motion picture presented by Pittsburgh Plate Glass Company, which describes the work of architects in shaping our environment. The film focusses on two of the nation's 25,000 registered architects, Tom Stanley and George Dahl, and their work in creating the new First National Bank Building in Dallas.

Designs Merge Utility With Beauty

Stanley and Dahl are seen in person as they discuss plans for the new building with the bank's building committee and its chairman, John Dunlap, a senior Vice President of the First National of Dallas. Later, we see the problems of creating the 52-story building to meet the needs of the bank, not only now, but in the future; the task of making a utilitarian structure, but at the same time a beautiful one.

As in many new buildings, the First National in Dallas will be constructed with glass exteriors, following the rich heritage of Saarinen Wright, Corbusier and Mies van Der Rohe. Over eight acres went into its outside walls

Sponsor Serves Customers — and Itself

Pittsburgh Plate Glass performs a real service for its principal customers — architects and engineers — in this film. The company believes that in this climate of service it can best state its case as a leading supplier of building materials, and also enhance the sales of these materials.

An Architect at Work was supervised for PPG by Michael Batenberg, Director of Information Services, and Robert C. Daley, Chief, Product Information Section. It was produced for Dynamic by Walter Lowendahl and written by Arnold Perl.

THE EDITORIAL VIEWPOINT:

(CONTINUED FROM PRECEDING PAGE TWELVE)

"Steel by Stopwatch' An Outstanding New Picture, Is Sponsored by Jones & Laughlin

Those who have seen it, report unanimously that the new Jones & Laughlin Steel Corporation's 27-minute color film, *Steel by Stopwatch* is an exciting new visualization. Produced by a former top Hungarian film maker, Jules Potocsny (now with Continental Motion Picture Company in Cleveland, Ohio) the film shows the introduction of the important new basic oxygen furnace steelmaking process.

Its primary target audience is in the research institutes and among potential J & L clients. The film shows the operation of and processes involved in the company's new 230-ton BOF furnace, explaining the new methods which make 230-ton heats of steel in 40 minutes. After "tapping," the research center of J & L is visited and constant improvements being made in the process are noted.

An original score, composed by Zoltan Roznyai, first assistant to Leonard Bernstein, conductor of the New York Philharmonic Orchestra, adds much to an already excellent motion picture.

* * *

A Primary Editorial Goal: the Cataloging of All Available Free, Rental Film Subjects

☆ Which brings to mind that existing motion pictures and slidefilms, sponsored by industry and trade groups, *are a tremendous resource at hand*. We're giving top editorial priority to our Film Guide program, acquiring new automated listing and tabulation equipment to better control the immense amount of data which we have accumulated since the publication of our big Index of Training Films. Special Resource Guides, like our Sales Manager's Film Guide and the Film Guide for Management, are being implemented with other specific listings to be made available at low cost to spur group use of these valuable pictures. The libraries of national film distributors (see page 79 of this issue) are being explored for other combined guides to free loan films available from industry.

A key to all this is that these films spur *projector purchases*, when available (as they are) in both 16mm and 8mm sound and for sound slidefilms. *They also spur use of existing equipment* in plants, offices and in the community. Existing free-loan and low-cost rental films of industrial-business interest can help the Manpower Development and Training Program (see above); they can help in vocational guidance; they are invaluable in the safety education work being done on all levels.

"I know the script called for a long shot, Hanson, but you dollied a little too far!"

We cannot think of a single more important goal than the immediate cataloging and publication of more individually useful Film Guides and we hope to accomplish much in this area in the months ahead.

* * *

Official Film of the Seattle World's Fair Is Produced by Mariner; Offer Sound Prints

☆ The official film of the Seattle World's Fair, produced by Mariner Films, Inc., of Seattle, is being offered on a print sale basis following completion of a four-week engagement at the Fifth Avenue Theater in the Fair's home city.

The 13-minute Eastmancolor picture has no narration. The sound track consists of music, sound effects (including actual sounds of the Fair) and it thus permits overseas showings without translation. Bud Jones of Mariner is credited with a top-quality, artistic effort on this exciting, timely film subject.

FAMILY CIRCLE'S PICTURE:

(CONTINUED FROM PAGE FIFTY-FIVE)

the monopoly of the crossroads stores — because it was the only one around and the tyranny of distance and time made it into a true monopoly.

FAMILY CIRCLE, distributed in supermarkets all over the country, is offering this interesting and informative film to its food merchant customers as a public service. It points out that chain supermarkets earn just over a penny (1.38 cents) on each dollar we spend. From the ends of the earth they gather, wash, cool, transport, handle, store in warehouses, haul in trucks, and display in stores the food we eat. The average family of four spends about $1600 a year in food stores — and the chain supermarket gets to keep just $22.40.

That's a pretty good bargain we're getting.

* * *

☆ *The Good Ol' Days* uses amusing old footage of grocery stores at the turn of the century, some fascinating stop motion work with dolls, and mouth-watering up-to-date food photography to tell the supermarket story with great effect. Sixty prints are now circulating among general audience groups.

* * *

Tele-Monte Carlo Is Only One of Two Commercial Outlets to French Audience

☆ Princess Grace's little state on the Mediterranean, better known to us as Monte Carlo, operates one of the two commercial TV stations which French people can see (up to now there was no commercial TV in France).

Tele-Monte Carlo covers the lush pastures of the Riviera and most of the advertising is local but Esso and Mobil-Oil use the station for "spots." Sponsors of public relations films may also use the station as a distribution medium. The transmission cost of a 26 minute film is about $950.

* * *

P. S. to Bell System Story on Page 56; Five New Science Films in Plans Stage

☆ Five more short science films have been planned: John Sutherland is doing one on the Bell Labs' Guidance System; Chuck Couch is producing a cartoon on such far-out guesses of tomorrow as the "picture-phone"; and Owen Murphy is doing one on the optical maser. Others in the future may be on hearing and speech, and the electronic central office.

The varying lengths, styles and subjects of the new Bell System science series will offer the opportunity for showing singly or in various combinations as audience group interests dictate. As additional shorts are released the flexibility will increase. Their brevity, style and outstanding photography also make them ideal for theatres and television.

* * *

National Board of Fire Underwriters Film to Motivate Employee Interest

☆ A new 15-minute color film, *Are You Sure?* is being released by the National Board of Fire Underwriters to motivate employee interest in plant fire prevention programs. Board offices are located in Atlanta, Berkeley, Chicago and in New York City.

STATEMENT REQUIRED BY THE ACT OF AUGUST 24, 1912, AS AMENDED BY THE ACTS OF MARCH 3, 1933, JULY 2, 1946, AND JUNE 11, 1960 (74 STAT. 208) SHOWING THE OWNERSHIP, MANAGEMENT AND CIRCULATION OF Business Screen Magazine, published eight times annually at six-week intervals at Chicago, Illinois, for October 1, 1962.

1. The names and addresses of the publisher, editor, managing editor, and business managers are:
Publisher: O. H. Coelln, Jr., 7064 Sheridan Road, Chicago 26, Illinois.

USE THIS DIRECTORY TO LOCATE THE BEST IN EQUIPMENT, FILMS AND PROJECTION

Mickey Schwarz to Produce in Manhattan, Toronto Studio

☆ Mickey Schwarz, producer-director of filmed television commercials, has established production centers in New York and Toronto.

Mickey Schwarz Production Inc., will be based at 419 East 54 Street, New York, in a compact studio including sound stage with permanent cyclorama, editing and projection facilities and administrative offices.

Concurrently, Schwarz has formed Academy TV Film Productions of Canada at 433 Jarvis Street, Toronto. Associate Producer Ruby Renaut is heading the Canadian office.

Mickey Schwarz has been a motion picture producer, director and editor since 1937. He has operated as an independent since November, 1961, after four years as a producer-director for MPO Videotronics. Prior to that, he was in Hollywood as a director.

* * *

Valentino Offers Music Catalog

☆ The 7th edition of the Major Mood Music Catalog for 1962-63 has been announced by Thomas J. Valentino, Inc., 150 West 46th Street, New York 36.

The catalog lists over 800 selections of music for use in films for documentary, industrial or television. Many new titles, end titles and bridges are listed. The Record Library of this background music catalog now includes 206 records. Works of three new composers added to the Valentino staff are covered in the new source.

* * *

Stevenson Film Productions Formed in Norman, Oklahoma

☆ Stevenson Film Productions has been formed in Norman, Oklahoma, by Carl G. Stevenson. The new company will produce motion pictures and sound slidefilms for business and industry.

A former motion picture project officer with the Air Force, Stevenson most recently has been on the staff of the University of Oklahoma as a producer-director. Dwight V. Sain will head the creative writing department.

* * *

Cole Names Glunz a V. P.

☆ Gordon E. Cole, president of Cole Film Productions, Rochester, New York, has announced the appointment of Russell J. (Bud) Glunz as a vice-president. He has served as executive producer for the past two years and is a former senior cameraman for the National Film Board of Canada.

FIFTY CENTS

As you read this, business-sponsored films distributed by Modern are being viewed in churches and clubs . . . before community groups, industry employees, and schools . . . in moving picture theatres and on TV. The conservative estimate above of Modern's viewing audience for December is based on definite bookings. Whether you want your sponsored film to reach one segment of this huge audience or a combination of segments depend upon Modern's experience-in-depth to delineate the audience, arrange the bookings, get the film there on time (thanks to thirty strategically located libraries) and provide you with IBM-tabulated reports.

A business-sponsored film cannot do its job until it is seen by people. To have it seen by most people at lowest cost . . . consult with Modern.

2-4

These charts should be in your files

Who knows when somebody might ask you a question like "What's the minimum overlap on a zero cut?" Or, "How many generations will we have in those prints?"

Sure, you'll know the answer, but why bother? Show him one of these Producer Service Bulletins we just put out. They don't cover every situation, but they try!

Four of the twelve are editing charts. They show how to mark workprints to indicate effects, how to prepare 16-mm and 35-mm film for A & B Roll printing, and how to prepare 16-mm printing leaders.

The other eight are printing flow charts. They illustrate the steps required in different types of printing, from the camera stock to the release prints. All are punched for a three-ring binder (the big ones fold to fit.)

We'll be glad to send you a set of these charts, as long as we have them in supply. Let us know. If you feel inclined to tell us, we'd like to know what you do in your job. It helps us plan advertising.

Exhibitors' Plans Reveal Wide Use of Audio-Visuals to Win and Hold Fair Audie

THE NEW YORK WORLD'S FAIR of 1964-1965, now an unfinished 646 acres of noisy pile-drivers, air compressors and irate motorists irritated by the unending traffic jams, figures to be the biggest show in the history of the world when it opens on April 22, 1964, in Flushing Meadow Park.

According to Thomas J. Deegan, Jr., Chairman of the Executive Committee of the Fair, "The projection of 70 million paid admissions — a forecast made for the Fair by the nation's leading bankers, and hence, conservative — is the largest single box office ever attempted in history for a single attraction in a period of two six-month seasons.

Comparative Attendance at Other Fairs

"The most recent total figures on comparable events are the Brussels Exposition in 1958 with 42 million admissions in a single five-month season; the American National Exhibition in Moscow in 1959 with an attendance of nearly three million in ten weeks; the Russian Exposition at the New York Coliseum in 1959 with 1,100,000 attendance in 42 days; and the last New York World's Fair in 1939-1940 with 47 million paid admissions in two six-month seasons. The Seattle Fair, open since April 21, has run 17 per cent over estimates—a good omen for New York."

Already in the construction stage on Flushing Meadow are buildings of the Bell System, Du Pont, Eastman Kodak, Electric Power and Light, Ford, Festival of Gas, IBM, General Motors, Sinclair Oil, Travelers Insurance, the Port Authority Heliport, New York State, the Vatican City and Hong Kong. In all 65 foreign exhibitors, 30 states and 38 industrial concerns are slated for exhibits thus far. The Fair is about 71 per cent allocated, and should be up to 100 per cent within the next few months. Other industrial exhibitors whose buildings have not yet been started are: Coca Cola, Continental Insurance, Formica, General Electric, Liebmann Breweries, National Cash Register, Pepsi Cola, Simmons, Johnson's Wax, Schaefer Brewing, Scott Paper, U. S. Steel, Chrysler, Greyhound, Mobile Homes, SKF Industries and United States Rubber Company.

Bell Takes Visitors Through Theaters

The Bell System Exhibit will be in the form of a floating wing, 400 feet long, 24 feet above the ground and supported at only four points,

The New York Fair exhibit of Gas, Inc. will be a pure white building with walls of air.

and will occupy a 105,000 square-foo Visitors to the building will be seated in r chairs which will take them through a of theaters in which the story of comm tions will be dramatized. They will hear rator speaking through binaural speake in the wings of the chairs. In addition theaters, the building will contain a lar with exhibits of man's first space comm tions efforts.

Walt Disney Enterprises is working number of projects for presentation to po exhibitors at this time. Disney is also des the General Electric Exhibit.

Among the state exhibitors, New Jerse New York have indicated that they plan t struct theaters in their pavillions.

Many Exhibit Plans Not Yet Complete

For the most part, plans of the ind exhibitors have not been determined fu this date, or are being kept under wraps. ever, there are many indications that visual media will play an even more imp role in the coming Fair than they did in 1962 and at New York in 1939-40.

* * *

Filmed Reports on the F

Series Being Produced by John Can

THE NEW YORK WORLD'S FAIR 19 has contracted with John Campbell Byram, Conn., to make periodic film r of the Fair. The second in a series of the ports is now receiving wide distributio television through all Telefilm libraries sociation Films, Inc.

Narrated by Bob Considine, *Preview, York World's Fair* 1964-65 ranges fro trees and paths of the exposition's 64 park site in Flushing Meadow Park t finished show of shows in a dramatic u ing of exhibitor's pavilions, models and struction already underway.

Opening with a glimpse of the 12 Unisphere symbol of the Fair's purpo "peace through understanding", Con takes the viewer on a dramatic tour of and who goes into the making of a W Fair — its people, products, governmer dustry, fun, sports, shows and above dedication to international friendship.

Answering the question of "What World's Fair?", Robert Moses, preside the Fair, defines it as an "Olympics of ress". Also emphasizing the importan this World's Fair is a host of visitors i ing the man and woman on the street, no of stage, screen and government, and f Presidents Hoover, Truman and Eisen on stage at the Fair grounds.

From the initial shovel-wielding ope to the final show place that will be view an estimated 70,000,000 visitors to the this preview film gives the audience a

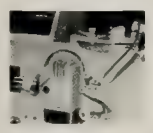
automatic 8 mm sound motion picture repeater projector... MPO Videotronic 8



Now, salesmen, training directors and exhibitors can show motion pictures as easily as turning on a TV set! Show them in daylight on a prospect's desk or to a large conference room group. Show them in a display or a trade show exhibit. Show up to 15 minutes of 8 mm sound film over-and-over with no operator, no rethreading or rewinding. Show your films on a big, self-contained screen. Show them with unmatched brilliance and clarity in picture — the brightest picture available — and clear undistorted sound.

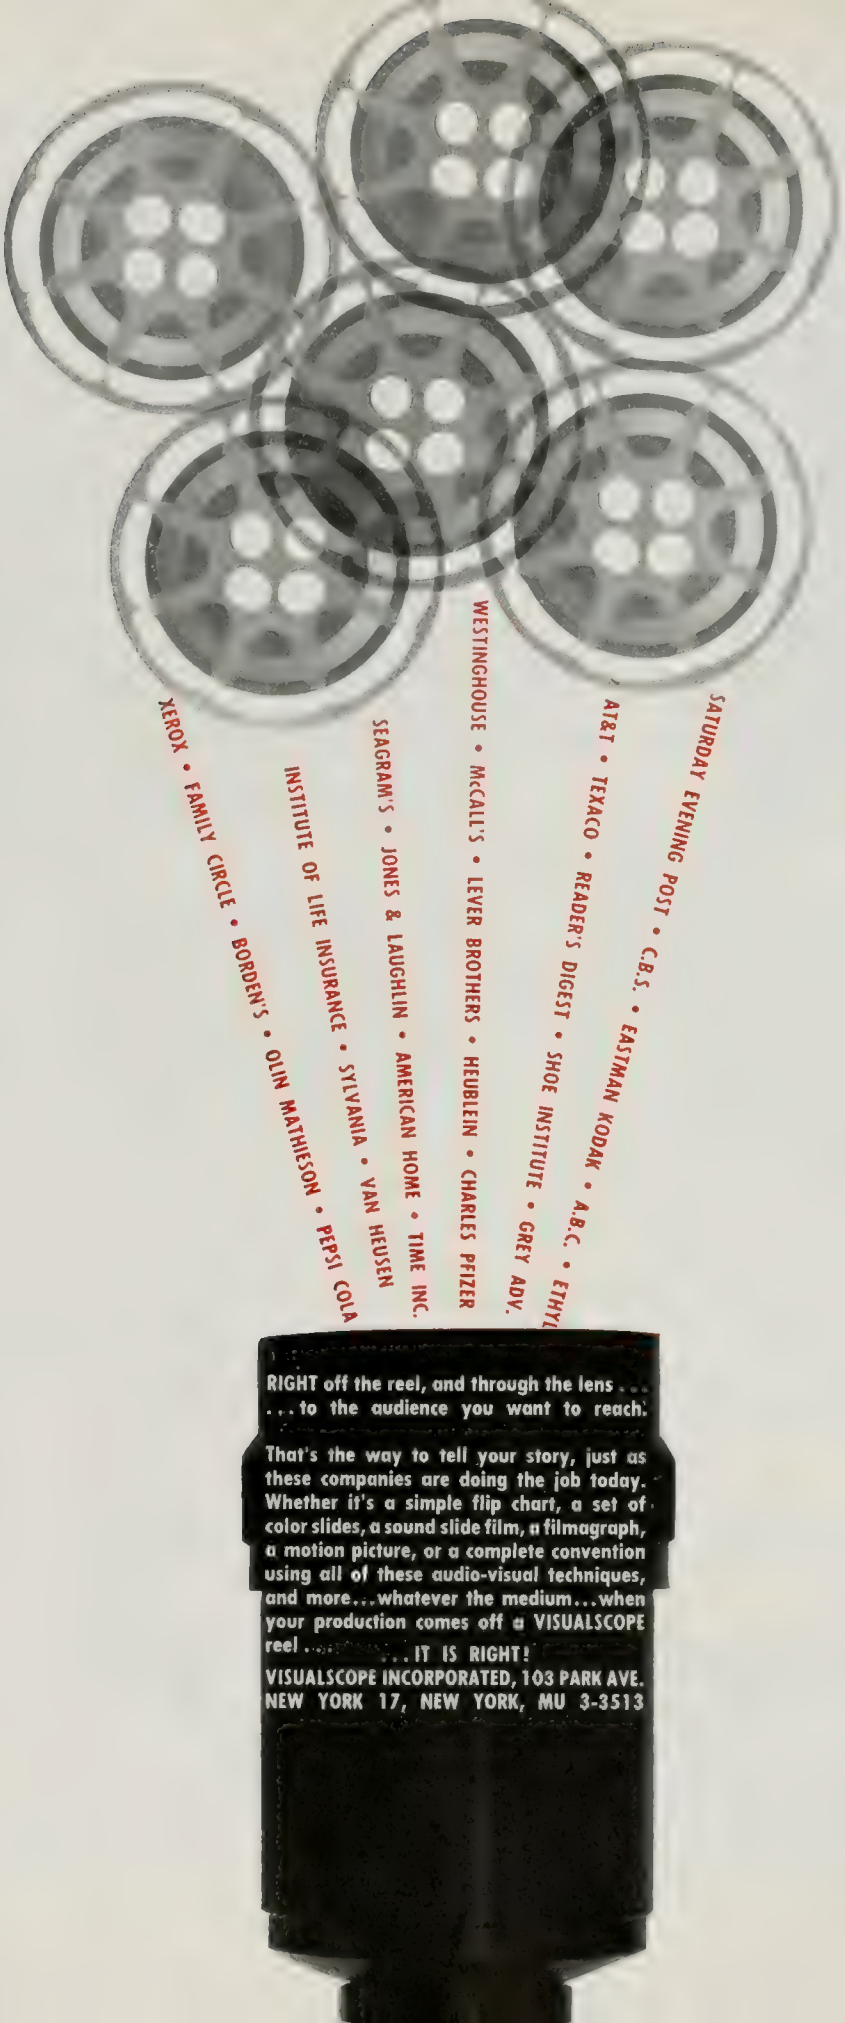
EASY TO CARRY
Light as a portable typewriter, the Videotronic 8 weighs only 19¾ lbs. Smart, luggage-type case makes it easy to carry, and easy to take along

VIEWING
Self-contained, fold-out rear projector screen for daylight, desk-top viewing. Finger-tip mirror adjustment for conventional screen projection.

NEW FILM LONGEVITY
Short film path, unique, powerdriven film platter and specially designed rollers and gate. Tension, abrasion and scratching are virtually eliminated.

CYCLING UNIT AVAILABLE
For display and exhibit use, for use in "closing" and show rooms. Visitor activates machine. Film runs to end and cuts off, ready to be started again.

NEW PATENTED PRE-LOADED MAGAZINE
Film comes to you in a preloaded plastic magazine. Rewinds film automatically during projection. Stop and start anywhere in the film.



PATENTED GUIDE ARMS
gently shape the film coil so that a friction-free space is created in the center of the magazine. The film loop is fed to the projector without tension.

PREPARATION OF 8 MM FILMS: To start your program with the Videotronic 8, MPO, world's largest producer of sponsored films for industry, can make a new, inexpensive 8 mm sound film for you . . . or convert your existing 16 mm films to 8 mm. And 8 mm prints cost less!

LOWEST PRICED 8 MM REPEATER! With all of its quality features and advancements in continuous projector design, the Videotronic 8 is the lowest priced repeater on the market! It can be purchased or leased on an attractive low-budget monthly lease/purchase plan.

HIGHLIGHTS FROM THE NEWS

22 Million View General Motors' Films in '61; Company Releases 22nd Annual Catalog

☆ Motion pictures sponsored by General Motors were shown to 409,000 audiences last year, reaching 16 million persons. In addition, there were 98 television showings with an estimated 6.4 million viewers. The figures were disclosed by Anthony G. De Lorenzo, GM vice-president in charge of the Public Relations' Staff, as the company issued the 22nd edition of its catalog of free loan films.

GM's 1963-model film catalog lists 48 16mm sound films, highlighted by the recently-released, *American Thrift*, produced by The Jam Handy Organization and latest in the company's series of "Great America" films. The new catalog is available from General Motors Corporation, Public Relations Staff Film Library, GM Building, Detroit 2, Michigan.

* * *

Glen Glenn Sound Names Clayton Fox as Vice-President in Charge of Business Affairs

☆ The appointment of Clayton Fox as Vice-President in charge of business affairs for Glen Glenn Sound Co., Hollywood, has been announced by the company's board of directors.

A former assistant to the vice-president at Desilu Productions, Mr. Fox served for 11 years in the same capacity at the Columbia Broadcasting Co. He resides in Burbank.

* * *

News of People and Pictures at Presstime:

☆ Ralph Sogge is the new Marketing Manager at the Magnasync Corp., Hollywood. He was formerly director of customer services.

* * *

☆ Entry deadlines for the 3rd International Broadcasting Awards competition sponsored by the Hollywood Advertising Club have been extended to January 1, 1963 for U.S. entrants and to January 15th for overseas competitors.

* * *

☆ The Educational Film Library Association is holding a special Film Evaluation Workshop in Chicago on January 24-25. Advance registration form and programs may be obtained from EFLA at 250 West 57th Street, New York 19, N.Y.

Why not? It's more sensible than making your own titles because you spend more yearly for your film than you spend for your titles. It's doubtful if your film will be very professional looking but . . . in all probability . . . neither will your do-it-yourself titles!

Make your own film?

KALART VICTOR

MOVIEMATIC AND DUOLITE MODELS

This Salesman Never Gets Tired

He also has a flawless delivery, a photographic memory for sales features, and a continually cheerful disposition.

In short, he's a 16mm sound film that goes anywhere to tell your story perfectly through the use of a Moviematic or Duolite projector.

Moviematic and Duolite models by Kalart/Victor are designed to show your films under the exact conditions you want. For example, the built-in screen permits the use of film in a person-to-person sales situation. And the repeater magazine—a Moviematic feature—eliminates rewinding and rethreading so your show can start at the flip of a switch.

Projectors are available on a purchase, lease, or lease-to-purchase basis. Almost any arrangement can be made whether you need a single projector or a fleet. For complete information, including the name of your nearest dealer, write to Victor Animatograph Corp., Dept. 3T

SMPTE Elects Officers for the Coming

President-Elect Reid Ray Assumes Office on Januar

Reid H. Ray, president of the Reid H. Ray Film Industries, St. Paul, Minn., has been named president-elect of the Society of Motion Picture and Television Engineers.

Mr. Ray will succeed John W. Servies, vice-president of the National Theatre Supply Company in New York, on Jan. 1, 1963. He has been a member of the SMPTE since 1929. A Fellow of the Society, Mr. Ray is completing a two-year term of office as executive vice-president.

A Long Record of Service

During his membership, Reid Ray has been active in Society affairs, having served as convention vice-president, chairman of the sustaining membership committee, chairman of the inter-society liaison committee, member of the nominations committee and a member of the membership committee. He also has been a member of the board of governors.

Ray received a B.S. in Commerce degree from the State University of Iowa in 1923. Since then, he has been active in the film industry in many capacities (cameraman, editor, writer, director and executive in sales management), and has for many years been president of the organization which bears his name.

Name Three Vice-Presidents

Other officers elected by national mail ballot are: executive vice president - Ethan M. Stifle, manager, East Coast Division, Motion Picture Film Dept., Eastman Kodak Co., New York. Editorial vice president — Herbert E. Farmer, faculty, University of Southern California.

Convention vice president — George W. Colburn, president, George W. Colburn Laboratory, Highland Park, Ill. Secretary — Robert G. Hufford, physicist, Motion Picture Film Dept., Eastman Kodak Co., Hollywood, Calif.

Seven to Board of Governors

The following members were elected to the 1963 SMPTE board of governors: For the Eastern Region — Max Beard, chief, Photography Division, United States Naval Ordnance Laboratory, Maryland, and Joseph T. Dougherty, technical representative, E. I. du Pont de Nemours and Company, New York.

For the Central Region — Kenneth M. Mason, manager, Motion Picture Film Dept., Midwest Division, Eastman Kodak C cago, and James L. Wasse tor, marketing, Professiona ment Division, Bell and Chicago.

For the Western Region liam E. Gephart, Jr., p General Film Laborator fornia, and Ralph E. Lov engineer, The Westrex C California.

For the Canadian Re Roger J. Beaudry, vice dent-general manager, Deluxe of Canada, Toronto.

New officers and g will take office on Jan. 1

Corporate image is corporate action. It is motion, on the go or in reverse, because every business is going and growing or it is going to be no business in the long run. Public relations motion pictures present a corporate image doing something worthy, progressive, pro-consumer-ish or just plain good neighborly. Public relations motion pictures mirror a company's good notions and forward motions.

Ansco sets America's standard in films that meet the need for speed

You see the fast-breaking action sooner on New Super Hypan Reversal film! (Film speed 200, forcible to 400)

This black-and-white reversal film is the thing news-beats are made of. You save negative printing time and processing. Cover any action with film speed to spare (Normal 200 or boost it to 400 with forced development.) And be sure of this—your fastest action shots will project beautifully without objectionable grain . . . even when you use this film at higher speed. With Super Hypan Reversal you cover all assignments and see them faster with all the sharpness and detail you want.

ANSCO—America's first manufacturer of photographic materials . . . since 1842.

CINE Presents Festival Awards

Committee on International Non-Theatrical Events Honors Winners of Overseas Film Festival Awards at Gala Affair

N THE NIGHT of November 13th, before a VIP-glittering dience in the nation's capital , forty-two American-produced tion pictures, their producers d sponsors, were honored for ards received at 16 internation- film festivals during the current r.

The annual awards affair was nsored by CINE (the Committe on International Non-Theatri- Events), the U.S. organization ich was formed at the request overseas countries sponsoring tivals to serve as the official co- linating agency for American tries.

68 Receive "Golden Eagles"

In addition to the honors bestwed upon the fortunate few, NE also awarded 68 of the covd new "Golden Eagle" certifies for films entered in this year's mpetition; these were chosen m 188 motion pictures submitd to CINE screening committees 1962 festival consideration.

The Committee's black-tie af-, which attracted well over 500 ople, was held in the National ucation Association's auditori- ; the exhibition was preceded a reception and dinner for embassy officials, sponsors, producers and CINE members.

National Chairman John Flory conferred the new "Golden Eagle" certificates on producers and sponsors who came to Washington from all parts of the country.

Edinburgh Awards Are Presented

Edinburgh's International Film Festival certificate awards were presented by Michael Robb, Information Minister of the British Embassy; presenting the honors won at the Venice International Film Festival was Gian Luigi Milesi Ferretti, Minister of the Italian Embassy. For the other festivals around the world, winners were recognized by Wilbert H. Pearson, Motion Picture Service, United States Information Agency. Mr. Pearson is also Chairman of the Interdepartmental Committee on International Motion Picture Events for the U. S. government.

As a prologue to the evening's program, the highly-honored film, *Mark,* produced by Washington Video Productions, was screened for the enthusiastic awards audience. Producer George F. Johnston later received both Edinburgh and Venice awards for the picture.

Welcomed by NEA President

Following this preview, Mrs. Hazel A. Blanchard, President of the National Education Association, welcomed those in attendance with a plea to remember that the government needs the help of industry to build real international understanding. "Let your film be an ambassador abroad," was the theme of her brief address.

In like vein, Mr. Pearson reminded those in the film industry that their pictures were an important factor in projecting a "variety of bright and clear images overseas."

Excerpts from the following "Golden Eagle" films were also screened: *Sunday on the River,* produced by Gordon Ray Hitchens; *Liquid Jazz,* produced by

Highlights in the NEWS of Communication

Dramaturgy, Inc. of Cleveland, Is Acquired by Wilding, Inc.

☆ Wilding, Inc. has announced acquisition of Dramaturgy Inc. of Cleveland, Ohio. H. Williams Hanmer, president of Wilding, said that by combining their present services with those of this leading industrial show and display house,

C. Rankin Bingham

Wilding will offer a complete service to the field of business communication.

C. Rankin Bingham, president of Dramaturgy, will retain his position and operate this company as a division of Wilding. Bingham is credited with being one of the early producers of the modern musical industrial show. His original works in the appliance, automotive and beverage fields are well known in the trade.

Dramaturgy's design of the Mobil "Driver Game" at Seattle provided one of the more popular exhibits at the Century 21 Exhibition. Their "Enchanted Forest" appliance display at Pacific Ocean Park in Santa Monica was an industry first. Ballet dancers lead over a million people a year through the scenery of a completely programmed 10-minute musical commercial. Over 200 applauding viewers are "processed every" 10 minutes.

U. S. Sponsors a National Tour of Teaching Machine Exhibit

☆ The first major exhibit of teaching machines and programmed instruction procedures is now on a nationwide tour which includes six principal U.S. cities, the U.S. Office of Education has announced.

Cities and dates for the tour are: Louisville, Ky., Nov. 1-3; New Orleans, La., December (one week); St. Joseph, Mo., Jan. 31-Feb. 2, 1963; Atlantic City, N. J., Feb. 16-20; Oklahoma City, Okla., March 30-April 3; Denver, Colo., April 21-26.

The displays, occupying more than 1,000 square feet, will give training leaders and other interested visitors an opportunity to appreciate by personal experience the progress made in the development of modern educational media since the National Defense Education Act was passed four years ago. Visitors can, in effect, become actual students, working on machines and other instructional materials as they move through the demonstration area.

Highlights of the Exhibit

The exhibit is highlighted by the following features:

Tape recordings of students and teacher reactions to programmed instruction.

Films of children at work in automated learning situations.

Descriptions and samples of all teaching machines currently on the market.

Case histories of program usage in school systems.

A library of academic programs, and a collection of vital research findings in programmed instruction.

Defense Act Provided Impetus

This new educational technology received impetus under the National Defense Education Act. Part of this legislation provides funds to conduct, assist, and foster research and experimentation in the educational uses of television, motion pictures, tape recordings, and similar media for more effective teaching.

Since the beginning of the program, nearly $10 million has been obligated for the support of 169 research projects to determine the most effective way of using communication devices for educational purposes. In addition, over $4 million has been earmarked to familiarize schools, universities, and the general public with developments in the new teaching techniques.

Under the auspices of the Educational Media Branch of the U.S. Office of Education, the touring exhibit was prepared by the Center for Programmed Education, Inc., a nonprofit educational organization.

Invitations to view and take part in the exhibit were sent to teachers, school administrators, industrial training directors, and other interested citizens within a 250-mile radius of each city on the itinerary.

BELL & HOWELL PRODUCTS ARE AVAILABLE IN CANADA THROUGH CANADIAN DEALERS / SPECIALIST AUTOLOAD FILMOSOUND ARE TRADEMARKS OF BELL & HOWELL COMPANY

Before

Finger-fumbling could 'lose' your audience before the show ever began!

After

No 'amateur night' presentations with this automatic 16mm sound projector!

Bell & Howell's new Specialist Autoload Filmosound projector threads itself (no other 16mm sound projector does)! See how this ease and dependability can make your films work more effectively for you!

Threading a 16mm sound projector used to be a finger-fumbling job. Distracting, time-wasting threading delays sometimes destroyed the effectiveness of film presentations.

Now the new Bell & Howell Specialist Autoload changes all that! This one threads itself—sprockets, film gate, sound head and all—automatically! And because threading is precise, film-flutter and off-key sound are also prevented automatically.

In addition, you get all the other advantages of the Specialist . . . light weight . . . brilliant picture . . . reverse . . . single frame viewing . . . rugged Bell & Howell construction.

WASHINGTON FILM COMMENTARY

by Mary Finch Hoyt

Washington Correspondent for Business Screen

"Crisis on the Kanawha" Latest in Series on Water Pollution

. . . Another one of a series of seven important films showing the degradation of rivers by industrial pollution has just been released to the public by the Ohio River Valley Water Sanitation Commission.

In the words of John C. Geyer, Chairman, Department of Sanitary Engineering and Water Resources, the Johns Hopkins University:

"Public agencies and private industries have long been struggling with water pollution. 'Clean Rivers' has become the goal of many citizens clubs and groups. 'Keep Our Rivers Beautiful' is now heard on television and radio in school and at home. But how many people have seen at close hand the rivers that drain our industrial cities? People do not go to vacation where factories are."

Tours Urban Industrial Complex

Crisis on the Kanawha is a trip into and through a great metropolitan industrial complex. Here pollution is the nightmare everybody hears about but with which only an unfortunate few must live with night and day. Here one can see how troublesome a trouble spot can be. This visit is not a pleasant experience, but most enlightening.

The almost endless chain of sewer outfalls spilling to the River makes one wonder where is the point of beginning and where the end. *Crisis on the Kanawha* tells where lies a beginning — in cooperation, leadership and public interest.

Measures for Pollution Control

This documentary film shows the problem and it shows measures planned and works built to bring pollution of the Kanawha under control. Much of this type of activity is behind the scenes. The waste treatment plants are always behind the factories. It is difficult for student and layman alike, not only to grasp the problem, but also to visualize the planning and research and to see the construction, which, at whatever pace, is nevertheless moving toward a reduction of pollution in the Kanawha River.

In an eight state crusade, the Ohio Valley Commission has placed major emphasis on educational efforts to generate public support for this problem. Films like *Crisis on the Kanawha* are serving as specific tools for explaining the complications and unpleasantness which the Ohio valley area has faced.

Waste treatment plants are helping fight river pollution; industrial scene in "Crisis on the Kanawha."

These Ohio Commission films have been thoughtfully written by Richard Burgin, beautifully lensed by Theodore Jones and expertly directed by Stuart Finley. A brochure which includes a copy of the script of this latest picture and data on sale prints of the entire series is available from Stuart Finley, 6926 Mansfield Road, Falls Church, Virginia.

Church Aid to Refugees Is the Theme of This Episcopal Film

. . . The joining of churches in world service is basically the activation of Christ's teaching. And in our age of refugees — who flee from iron curtain countries, famines, earthquakes, and floods — the churches are challenged to unite, indeed.

The Refugee Story is a new 20-minute color film which shows how Christ's word has been implemented in a refugee camp in W ern Germany. Sponsored by National Council of the Episc Church, it describes the "hold operations of dislocated per who, for one reason or other, not be immediately "re-settled normal society.

How these static, linge hordes of people are cared fo the National Council of the E copal Church, Church World S ice, the National Council Churches, and CARE, is the t theme of the motion picture.

Raymond Massey hosts the which documents the plight German refugee family force remain in a camp while ot move out into the world. H lessly bound together in red and regulations, they stoutly i that "to be safe and togethe enough." But it is the spiritual material aid from church gr which really gives dignity meaning to their lives.

Photographed in West Be the remarkable faces of actual ugees gives this film partic poignancy. Charlie Byrd's m is haunting. The picture was p duced by Potomac Films, Inc Washington, D.C. Script was Jarvis Couillard. It was ph graphed and directed by Garner, edited by Sylvia Betts

GM Film Captures Hole-in-One Shot Made at Buick Tournament

. . . The first hole-in-one ever photographed in tournament golf is the feature of a new 28-minute color motion picture of the 1962 Buick Open Golf Tournament. And the shot was filmed by accident!

General Motors cameraman Al Corona, standing on a 15-foot platform behind the 17th green at the Warwick Hills Country Club, Grand Blanc, Michigan, caught the ball as it headed for the cup and dropped in. He quickly panned to the screaming crowds around the green, and then to Jerry Barber, the lucky golfer.

It's all on film — in what has been described as the most exciting golf movie ever made. Production was by General Motors Photographic, script by Coe-Peacock Inc., of Washington, and Modern Talking Picture Service will distribute the picture.

Rodel Productions to Occupy New Facilities in Georgetown

. . . In a shiny new three-story building on Georgetown's historic old canal, Rodel Productions, Inc. is locating complete modern facilities for motion picture and television production. A large sound stage, (80x50 with 20 foot ceilings), six cutting rooms, two audio studios, mixing facilities, offices and dressing rooms are being completed.

Rodel will continue to specialize in filming documentaries, news reports, and entertainment films for German TV networks. These are forty-five minute, "one-shot" programs on subjects which range from the nuclear aircraft carrier "Enterprise", to "Bobby Sox and Crewcuts", and "The American Woman."

In addition, Fritz Roland and Del Ankers, partners in the firm, have recently produced a fund raising film for Cornell University's New York Hospital, titled *The Third Century;* another tion picture for the Washin and Jefferson College in Wash ton, Pa., is in production.

The new Rodel address is: 1 33rd St. N.W., Washington D.C.

The Washington Film Commentary:

(CONTINUED FROM PAGE 24)
involved in our own community — on a long-term basis.

This feat was quite effectively accomplished by bringing the viewer up to date with Washington area UGF film stories from past years.

From the up-dating of these actual case histories, we see the tear-stinging progress of the little boy in our memory who had cerebral palsy in the 1961 film campaign; we discover that another cherub, blowing out two birthday candles on a cake, is the same baby who was adopted before our very eyes in 1960; and we are truly bereaved when we find that last year's little UGF girl with cystic fibrosis has died — and that her brother has contracted the disease now, too.

In one telling sequence, we see a lovely teenage girl, struggling terribly hard to tell us that she can now speak! — but, of course, she will never be able to hear. Then we remember that UGF sought funds to help her — ten years ago.

Because we know a lot about these angels — and because we remember them remarkably well — we find that we really *do* care. And in the final analysis, isn't that what makes us dig down deep?

Stuart Finley produced the film, and Ted Jones photographed this year's angels. (P.S. Angels in disguise are supposed to be sent to us from God to show how tall we stand.)

Catalog of U. S. Government Films Is Released by Norwood

☆ A handsome new catalog of 2,076 U.S. Government films which are for sale to the public has just been released by Norwood Films, 926 New Jersey Ave., N.W., Washington 1, D.C.

Within its pages, many new titles appear for the first time. Carefully organized into major and secondary categories, the catalog has been pre-punched for adding supplementary information as it comes along. The films included were produced for most of the Government agencies by their own film units and by commercial motion picture producers.

They include films from the following agencies: Agency for International Development (AID); U. S. Department of Agriculture (USDA); U. S. Army (USA); U. S. Air Force (USAF); U. S. Coast Guard (USCG); U. S. Department of Defense (DOD); U. S. Office of Education (USDE); U. S. Fish and Wildlife (FWS); U. S. Information Agency (USIA); Office of Inter-American Affairs (OIAA); U. S. Department of the Interior (USDI); International Cooperation Administration (ICA); U. S. Marine Corps (USN); U. S. Navy (USN); U. S. Public Health Service (USPHS); U. S. Bureau of Reclamation (USBR); U. S. Social Security Administration (SSA); U. S. Department of State (USDS); U. S. Veterans Administration (VA); U. S. Weather Bureau (USWB).

Youth Film Program Grants To Be Sponsored by USIA

☆ Future workers in the field of business and factual film-making will continue their studies while contributing to the world-wide documentary film program of the U.S. Information Agency.

Through a program of grants announced by the USIA, young producers in university schools of cinema will make six films on the role and activities of young people in America for showing to audiences overseas.

As many as 600 million people see USIA documentary films monthly in more than 100 countries overseas. These films are intended to help build understanding for the U.S. and its national policies, USIA says.

First recipients of grants under the new program will be Stuart Hagman and Maria Moriates of Northwestern University. Their film, *Good Night Socrates*, won the Best Documentary Award at the Venice Film Festival this year.

USIA director of motion pictures George Stevens, Jr., in announcing the program, said it was a part of the Agency's increasing emphasis on youth overseas — especially directed to future leaders in developing countries. Because all young people share certain basic ideals and goals, it was felt American youth could best tell the story of young America's energy and integrity to the youth of other countries.

The documentaries to be produced will deal with a counselor in a California conservation camp; a beginning teacher in the Midwest; a jazz composer in Texas; a student engineer; a young industrial designer; and a carpenter on a building project.

ACMADE TUNGSTEN PRECISION SPLICER

This moderately priced splicer incorporates new precision features which insure absolute accuracy and safety in splicing. Three models are available: Model 16-16mm., Model 35-35mm., Model 35-16 combination 35mm. and 16mm.

1. The combination 35mm.-16mm. Model features retractable 35mm. **and** 16mm. pins. This permits center placement of the 16mm. pins for A and B roll splicing.

4. Specially designed right-hand pressure block permits easy and accurate back-scraping on all models.

5. Tempered steel springs provide perfect pressure, positioning film firmly during scraping and splicing processes.

2. Stainless steel blocks are precision fitted with Tungsten-Carbide inserts for cutting. Cutting edges will remain sharp and last forever.

3. Attached scraper adjustable for depth — fitting jig incorporated on splicer base.

6. Thermostatically controlled heater maintains constant 100° temperature.

Operation of this simple, efficient editing machine can be mastered in minutes. Continuous (non-intermittent) movement provides absolute protection for your film. Instant controls and declutching allows up to 50% greater speed for pic & sound editing. All combinations of 16mm and or 35mm channels, plus magnetic and optical sound available.

WRITE FOR DETAILED BROCHURE

Acmade Foot-Operated Splicer with Tungsten Tipped Blades

Combination
16mm-35mm
Model
$1495

This splicer is constructed, as is usual with ACMADE products, of the finest materials and workmanship. All castings are of the best quality and the top body and cutter arms are seasoned to prevent distortion after machining. The machining is carried out to limits of ± .0005" in order that the cutter blades shall close in a dead parallel manner. The cutter blades are made from stainless steel with Tungsten Carbide inserts, and afterwards ground lapped and polished to a limit of ± .0002" thickness and the cutting edges relieved by 1°. The Tungsten Carbide inserts will have indefinite life and will not require sharpening as with other types. A heater unit is installed in the top body of the machine. The top light in a well glass fitting is attached to the body of the machine and also an inspection light in the waste bin together with cement bottle and brush. A scraper block is supplied and also a scraper block setting jib and support shelf rubber-covered. The whole machine is finished in first quality grey hammer and all metal parts other than cutter blades are hard flash chromed.

A-V Workshop in London

Sponsors, Makers Exchange Views on Communicating in Competitive World

At left: U.S. producer Henry Strauss presented views on "Integrating Audio-Visuals in the Company Communications Plan" at workshop. Right: John Underwood (left) of Birmingham's Technical College School of Photography and Ivor Congdon, Edric Films.

THE Venezuelan Ambassador to Britain, Dr. Borges, the Commercial and Press Counsellors of the United States, French, German and Italian Embassies, and 94 representatives of over seventy British industrial and film production organizations took part in BUSINESS SCREEN INTERNATIONAL'S first audio-visual workshop in London on November 6th and 7th, 1962.

Titled, "Communicating in a Competitive World" the workshop featured showings of award-winning films from the 3rd International Industrial Film Festival — Italy's *"Operazione Orinoco"* (Innocenti), *"L'Isola Vetro* (Venice Chamber of Commerce), *M6 N401* (Olivetti); France's *Alpha, Beta, Gamma* (French Atomic Energy Authority); *Adhaesion* (Farbewerk Hoescht) from Germany; Britain's *Black Monday* (Imperial Chemical Industries); and the U. S. A.'s *Remington Eleven* (Remington Rand International) and *Strangers in Paradise* (Pan American).

Opening the Workshop sessions, moderator Robinson Peter Rigg, BUSINESS SCREEN'S European Editor, announced that the films were being shown together for the first time since the Festival — later they would be shown in France, Italy and Sweden.

In his report on "How Does Britain stand in the World of Business Communications?", Rigg screened an extract from *The Faithful Carrier,* sponsored by oil company National Benzole (producer, Random Films), which featured sequences from the earliest British industrial film, a 1906 production showing how cookies were made.

In contrast he showed *Jam Session* (sponsor: James Robertson's Jams; p ducer: R.H.R. Productions), Britain's f non-theatrical 'musical' designed for show to women's groups.

Rigg urged that British sponsors sho make more working films — audio-vis tools to present product information train sales and production staffs in the markets in Europe and Africa.

After lunch the delegates divided i groups to discuss a-v problems in de Under Chairman Frank Harris, Carbor dum's Film Producer and Brian Gibson Kinocrat Films, in-plant film makers cussed production techniques and spec problems in directing and editing compa made films.

Better Business Bureau Film Builds Audienc

SINCE ITS JANUARY release, the Association of Better Business Bureaus' consumer education film, *Too Good To Be True*, depicting "bait and switch" advertising practices, has had over 40 television showings.

The one-minute trailer to the film, with ABBB President Victor H. Nyborg and Bud Collyer of TV entertainment film, also has received wide exposure. It was seen recently on NBC's *Tonight* show and *Play Your Hunch*, with combined audiences estimated at nine million viewers.

Produced by Audio Productions

Too Good To Be True was produced for the ABBB by Audio Productions, Inc.

Another significant channel of distribution for the film opened up this October with industry contributions of prints to school systems and libraries.

Typical of educator response was a letter from Frank B. George, Supervisor of Audio-visual services, Long Beach, California, Unified School District, who said the film "could be a valuable addition to our curriculum, especially in the areas of homemaking and distributive education."

He pointed out that these courses are taught in seven high schools as well as in the three divisions of the City College which, he felt, should create a large number of requests to use the film.

Business Firms Donate Prints

Prints of *Too Good To Be True* were recently donated on behalf of the Singer Sewing Machine Co. and the Electrolux Corp. to schools in Boston, Kansas City, Philadelphia, and Pittsburgh, as well as Long Beach. The prints were offered on evidence of facilities for print circulation to students and community groups, and facilties for cataloging and audience reporti

Additional requests for indus sponsored prints have been rece ed by the Association of Bet Business Bureaus from educat and librarians throughout the U and are being serviced within lim of presently available funds.

RADIANT'S chemical development laboratory

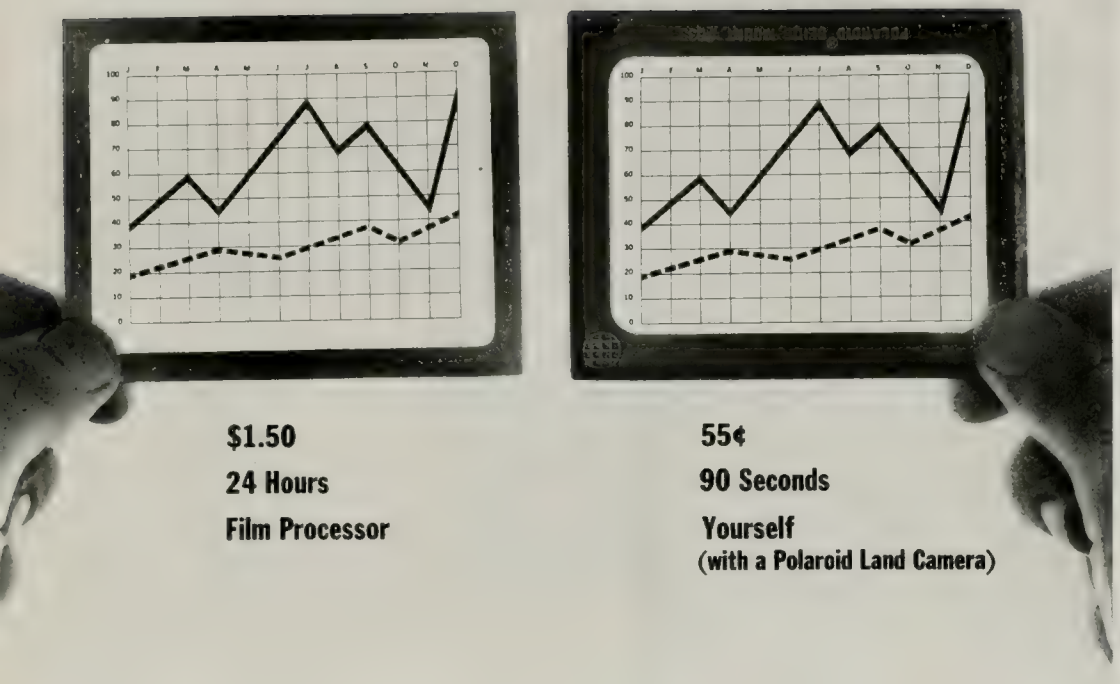
ANOTHER REASON WHY THE WORLD'S BEST PROJECTION SCREENS ARE MADE BY RADIANT

One of the many reasons why Radiant continues to lead in the manufacture of Projection Screens can be seen here in this completely equipped chemical development laboratory.

Here are just a few of the investigations and experiments that are being carried on by Radiant's research team of engineers and technicians.

- *—Tests for the development of new lenticular and beaded screen surfaces. Pictured here is a goniophotometer being used to check the reflective quality of a run of silver lenticular fabric.*
- *—Formulations of coating compositions for screen surfaces which will improve reflectivity, light stability and mildew and flame resistance.*
- *—New techniques for producing beaded surfaces by spray coating.*
- *—Quality control testing of incoming raw materials to assure that they meet high manufacturing quality standards.*
- *—Environmental testing to determine dimensional stability of fabric under fatigue and a range of conditions.*

Research and development facilities like this chemical laboratory are the reason why Radiant Projection Screens are recognized and preferred by consumers and dealers alike for their quality.



This is Screenland U.S.A. . . . Radiant's new manufacturing plant. We would be pleased to have you visit it — to see for yourself how and why the best Projection Screens in the world are made.

VICOM, INC. A SUBSIDIARY OF ELGEET OPTICAL COMPANY, 309 CHILD STREET, ROCHESTER 6, NEW YORK

Seattle's Fair Was a Bridge to the Future

and a Rich Mine of Ideas for Audio-Visual Exhibition

SEATTLE WAS A BRIDGE. This 1962 World's Fair tested and proved some invaluable doctrine for exhibit and exposition techniques, in addition to its shining example of solvency and good management.

New York lies at the other end of the bridge with its great Fair of 64-65. Already many plans have been divulged but still greater ideas remain unpublicized, still in development and still being created for the visiting millions.

An IFPA Convention Visit

We begin these pages of "Postscript, Century 21" with the work of architect-designer Charles Eames. This is, in text and pictures, a summation of Mr. Eames' presentation earlier this year at the Annual Meeting of the Industry Film Producers Association. As the JOURNAL of that working body of film makers, it is a fitting prelude to *their* magazine as well as to the ideas which lead up to Mr. Eames' triumph at Seattle.

The House of Science and other Eames' representations at Seattle had their beginnings in the 50's, and through the period of the U. S. Exhibition at the Moscow Fair in 1959 and we are proud that this creative designer has come to our field with a fresh pair of eyes and some exciting ideas. The multi-screen technique is not yet the; neither are the roads to *other original thinking* in forms of media communication.

The challenge faced and met by Peckham Productions in their contribution, *Infinite Horizons*, which was the final phase of the U. S. Science Exhibit, is reported in these pages. Again, new thinking is helping to meet the challenge of a complex century with vision and visual excitement.

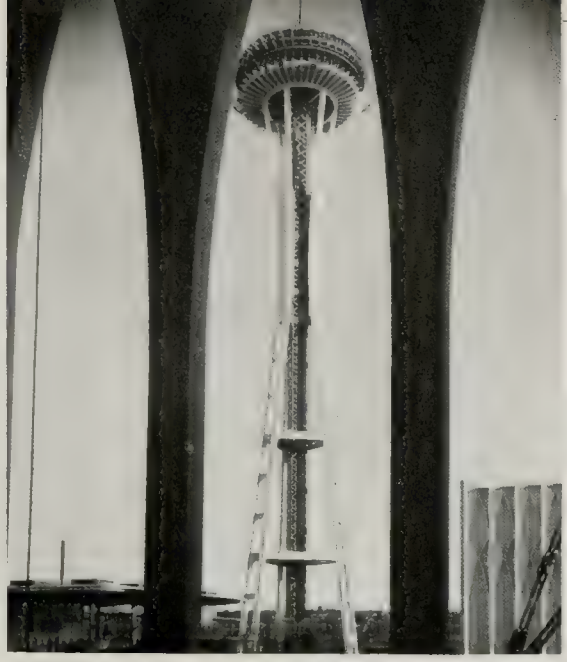
Some Truisms for Exhibitors

Seattle reminded us of some exposition truisms, like these:

Visitors liked comfortable *theaters*, especially those with interesting screen fare. This restful interlude came as a welcome relief to fair-tired feet on the long viewing days of the Fair.

People like push-buttons. The smallest show got its share of time and attention when the viewer was permitted his free-choice of ideas and a sense of participation.

Today's audio-visual equipment met the challenge at Seattle from 8mm sound to 70mm spectaculars. With vigilant maintenance, these shows were largely trouble-free because the people in charge knew their business, anticipated problems before they came along.



Let the pages flow . . . to give full rein to these reports on the Seattle Fair, some important features have been carried over to your next BUSINESS SCREEN. Our readers abroad will get special attention; here at home, the year's finest films will pass in review at year's end.

Greetings of the Season!

And to all of you . . . a very Merry Christmas and may 1963 be the happiest of all New Years!

These young visitors at the entrance to the Science Theater at the Seattle Fair symbolize the spirit of adventure to be shared within.

Seattle's Space Needle is framed by graceful arches.

CENTURY 21 LIGHTS THE WAY

THE SEATTLE WORLD'S FAIR, which brought everyone interested in exhibit techniques some infinite riches within its comparatively small fairgrounds area, was a fascinating laboratory of audio-visual technology and ideas.

Most of all, the mission of Seattle's Fair was to bring real understanding of our complex Century 21 to the visiting millions who trod its paths and hallways. A memorable example of the role played by sight and sound lay within the six areas of the United States Science Exhibit. Here, was the work of Charles Eames, John Peckham and Harvey Gross, of Fine Arts Productions, and the innumerable other companies whose footage, appearing on a multitude of screens, brought vitality and excitement to the prospects of the future.

In the pages which follow, many thousands of lines and lavish illustration are devoted to these areas and to many other examples of good showmanship, like Mobil's Driver Game, which won and held the attention of millions those all too-brief months of 1962 out in the Pacific Northwest.

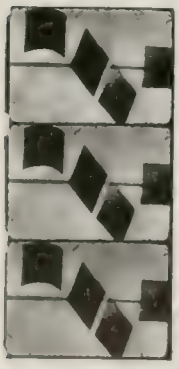
The vital importance of audio-visual service is underscored in the report by Max Rarig and David Christensen of Rarig's, Inc. Read the experienced comments on *print care* by Boyce Nemec and Max Rarig; the reminders about *heat problems* and *bulb life*. These are *ever-present problems*.

Seattle is more than a postscript in this issue. It must be "prologue" to the exhibitor making plans for the vast New York World's Fair of 1964 and to thousands of other exhibitors at state and regional fairs, trade shows and the like . . . for business, governments and trade groups are, in a sense, *always on display* before their publics.

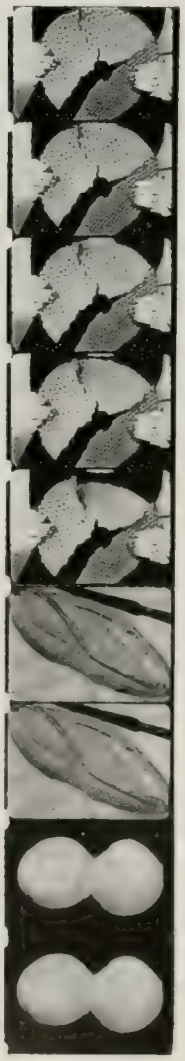
Farewell, Seattle . . . proud owner of some fine permanent buildings, an exciting new monorail and the enviable record of financial solvency achieved by its backers. Hail, New York and may your ideas go forward from this point of new challenge to bring all of us *the greatest show on earth!*

Approach to Multi-Imagery

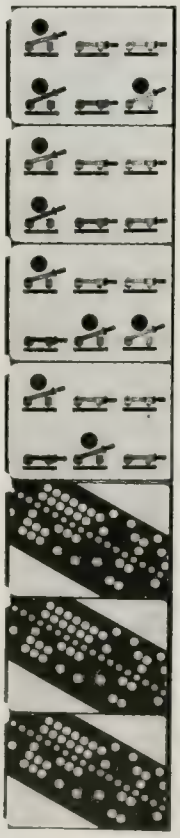
• The genesis of Charles Eames' work in the field of multiple image presentation can well begin with the study (in the early 50's) of educational problems made for the University of Georgia. The study group of George Nelson, Alexander Girard, Eames and his wife, Ray, was asked to suggest revision of curriculum in the University's Department of Fine Arts.



When it came time to make a report of their investigation, the group decided to put it in the form of a film — a visual communication. The sample lesson opened on a single screen, building up certain ideas in the communications area. As it developed, it began to spread out all around the classroom. The premise was to cram into one hour's lesson as many notions as were possible. There was also a film on the subject of bread and with it, the whole vocabulary of bread smells — worked into the lessons as another means of communicating an idea.

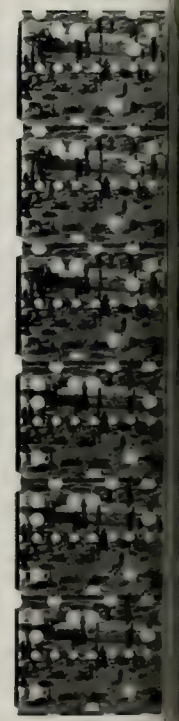


This was exhibited in a classroom (right) at the University of California at Los Angeles in 1953 and so began multiple-screen imagery.

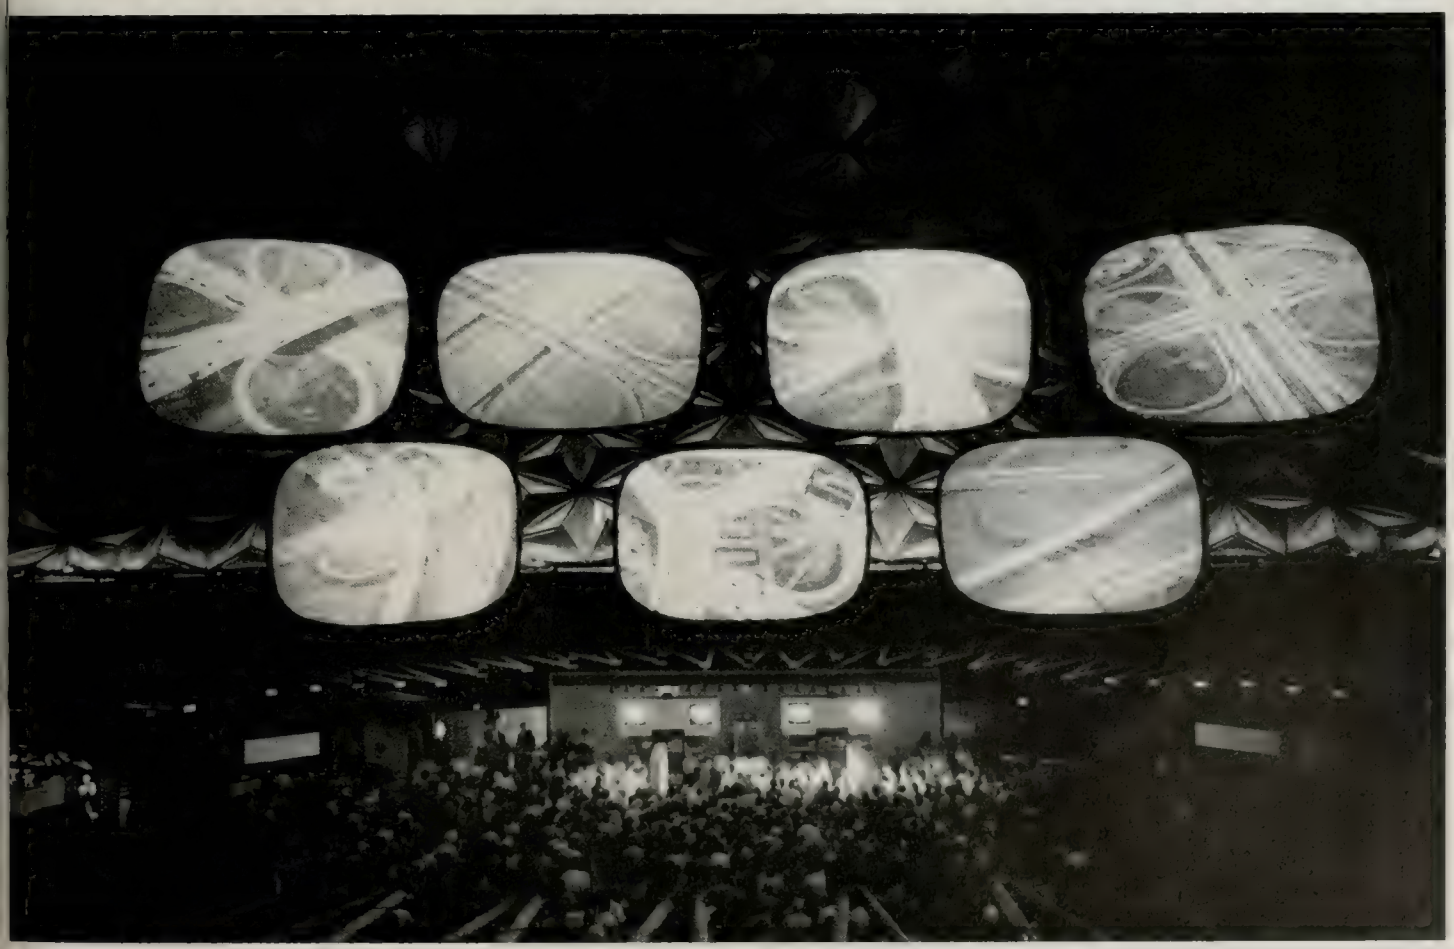


Here, filmstrips on subjects of calligraphy and (right) — bread.

These strips show emergence of multi-screen visualization.



Sample lessons were created to open the eyes and the mind . . .



The film, *Glimpses of the U.S.A.*, was shown at the 959 Moscow Fair to some two million Russians. Here ne goal was to create an air of credibility for what as displayed by the U.S. at the Exhibition. In 12 min-es, some 2,200 still and moving pictures were shown multaneously on seven screens. Viewers were not ex-ected to grasp each shot; the idea was to present a ide-ranging cross-section of American life.

Picturing Life in the United States at Moscow Fair: 1959

t the Moscow Fair: *for about* 12 *seconds there were some* 70 *separate overlanes and overpasses projected onto the seven screens simultaneously.*

1962: Visual Introduction to the U. S Science Exhibit

• Seven 35mm motion picture projectors are used to cast multiple images on the 34-foot concave wall which encircles the viewer. In pictures above, viewers sit on the carpeted floor while color slides are projected onto the wall, directing their attention and setting the mood for the film.

It begins with an animated sequence which treats the development of science as an architectural allegory. As new sciences develc new buildings take form and grow. The anim tion begins on one screen and spreads un it covers all six. The film then continu with live action and is intended to delin the viewer's notion of science by suggesti the variety and richness of its parts throu six simultaneous images and a concise scri

Mobil's Driver Game: a Show Stopper

This Audience-Participation Display Registered a Very High Percentage of Seattle Fair Visitors as Drivers Made a Simulated Economy Run Across U.S.

THE OBJECTIVE OF EVERY EXHIBITOR, whether on a sprawling World's Fairgrounds or the comparative humdrum of a trade show is to win and hold every possible visitor. Minutes of attention are golden and if they involve concentration on the sponsor's message, they're made of pure platinum.

The Mobil Oil Company's Driver Game exhibit at the Seattle Fair was that kind of attraction. This audience participation display turned out to be one of the most popular activities, with continuous long lines of visitors waiting to play the game. And for every one of the 12 actual participants, 10 others heard the Mobil message while they watched, greatly multiplying coverage.

They Drove Their Cars Cross-Country

Here's how the game was played: the individual player "rode" in the driver's seat of a Dodge Dart automobile and worked the steering wheel, accelerator and brake according to his reactions to a motion picture of situations which occurred in the famous Mobil Economy Run. The "driver's" reactions were evaluated and a digital readout automatically told him the gasoline mileage he would have gotten had he actually driven in that classic trial of automotive efficiency.

The Driver Game display, created and engineered by Dramaturgy, Inc. (now a Wilding subsidiary), involved a lot of very complicated mechanical detail. The optimum reactions expected of a driver were transposed to graphic form on cams within each machine. Cam followers were coupled to the steering wheel, brake and accelerator.

When the driver was operating with "correct" reactions, he maintained a perfect score. When he deviated from this optimum condition, penalties were automatically inflicted. The huge scoreboard (see illustration below) lit up at the end of each "game" to show the drivers the gasoline mileage they had scored. The machine was remarkable in its ability to show marked, measureable differences in the reactions of various drivers. This made the "game" both interesting to play and equally fascinating to observe as a spectator.

As the drivers followed the motion picture on rear-lighted screens above each dri position, they were notified of "errors" l flashing red light. They were able to follow progress of their own drive across the co ent by back-lit automobile profiles which peared on the huge map above the pla area.

Visitors Will Recall Mobil's Messag

During the game, uniformed Mobil att ants explained the operation from a platf above the players. Out of Seattle's 10 mi visitors, a very high percentage either pl or watched the Mobil exhibit. And it's a bet that an equally large number of vis carried away a memorable impression of bil's concern with efficient performance maximum mileage for the motorist. In case, the Driver Game was a lot of fun all concerned and another good demonstra of how audio-visuals can be employed achieve the exhibitor's ever-constant ob tive: to attract and hold every possible vis for all the time he will voluntarily give to product or service message.

They Helped Bring You These Report

☆ The Editors extend appreciative ackn edgment for assistance on these pages to and Charles Eames; to Reevesound's B Nemec and Barbara Skeeter; and, to our S tle reporters, Max Rarig and Dave Christen whose report begins on page 46.

Mobil's exhibit took Seattle visitors on one of its famed Economy Runs. While "drivers" viewed motion pictures of the "Run" t efficiency was registered on the huge scoreboard overhead and their progress recorded on the rear-lighted map spanning the stage be

ening scene of Peckham Productions' Science Spectacular at Seattle, "Infinite Horizons," as a flower bursts open in night sky.

Science Show Climax: "Infinite Horizons"

As Visitors Ended Their Tour of the U. S. Science Exhibit in Area 5 at Seattle, Startling Film Technique and Great Footage Brought This Culminating Expression

THE ASSIGNMENT: to place upon a wall 30 feet high and 100 feet long the culminating expression of the ten million dollar United tes Science Exhibit at the Seattle Fair.

E CHALLENGES: to create, in less than two nths, a provocative assignment on the mean- of science in Century 21; to develop new n techniques as startling as man's voyages o space; to assemble, from across the world, finest science film footage obtainable by n (and from every conceivable shape and e, to distill just one film).

The Concept for "Infinite Horizons"

These were the seemingly insurmountable jectives before Peckham Productions, Inc. New York, for the final phase of the exciting ience Exhibit as visitors entered Area 5. ter a series of meetings with Design Co-dinator Leonard Nederkorn and Robert Sny-r, Special Coordinator of the U. S. Exhibit, ckham's Creative Director, Harvey Yale oss, came up with the striking concept of *finite Horizons*. These are his words:

"I saw it as the scientist's random explora-n of nature — the sudden, unique revela-n which two separate events can become in e perceptive eyes of an artist or a scientist."

The physical demands of Area 5 had to be considered: (1) the building was a spiral nautilus chamber in which thousands of visitors an hour were carried forward on a giant conveyor and before the vast *Infinite Horizons*' screen (30 x 100-feet); (2) a central tower, standing in a moat, had to carry all the projection equipment to fill the screen 50 feet away; (3) a continuous show had to play to its audience for a maximum of four minutes (for traffic control).

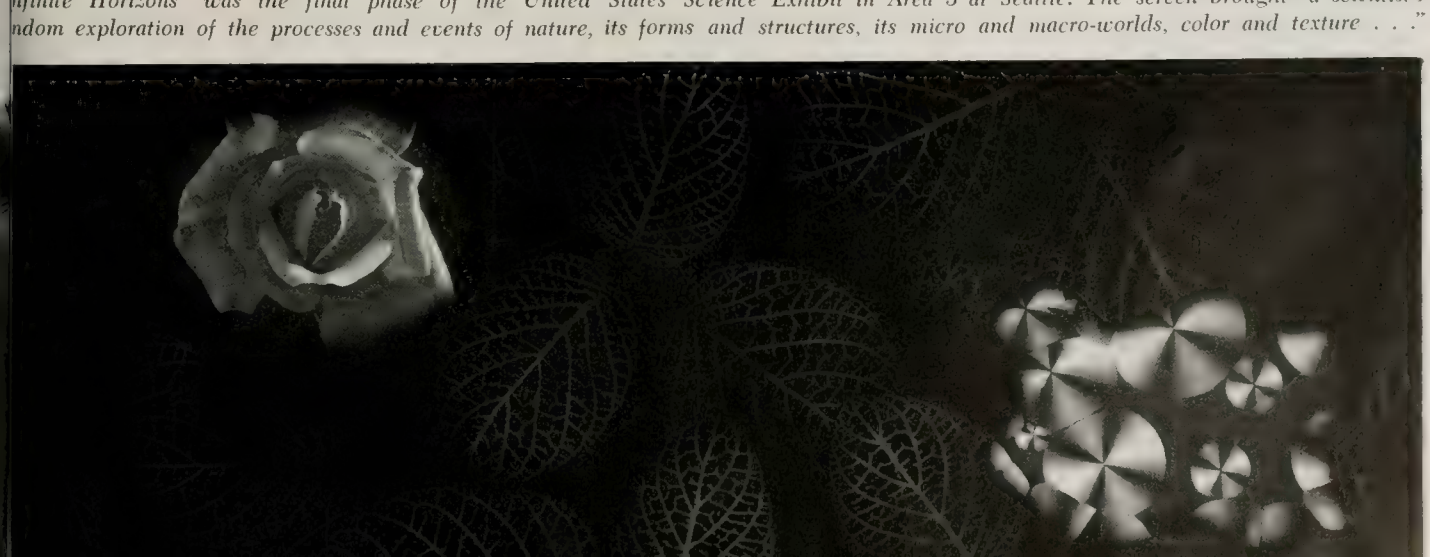
"Floating" Motion Picture Images

Out of these factors came the exciting technique of the film: two mobile "floating" motion picture images, in color, with variable matting, each about 16 x 20 feet, with both images moving against a single black and white still picture. 35mm Bauer projectors carried the films; two 5,000-watt Kleigl projectors illuminated the still picture on the wall.

Meanwhile, the finest available science film footage around the world was ordered for preliminary screening. To coordinate the creative planning on both coasts, John Peckham devised a unique dual-Polaroid copying system. Key frames from all selected scenes were instantly duplicated in tandem, given registration numbers and air-expressed across the continent. Any single frame of film could be instantly located from three-quarters of a million feet, and identified as to source, printing materials available and other key factors.

To do the exacting release printing (from such diverse materials as 16mm black and white, original Kodachrome, 35mm originals, Internegative, Interpositive, fine grains, etc., Peckham used optical houses on both coasts.

Charted a 4-Minute Movement Map



To create the floating images, Harvey Gross plotted a "four-minute movement map" (essentially, two closed curves, representing the centers of movement of the two motion picture projectors), which were translated by Reevesound into four cams that shifted mirrors horizontally and vertically in front of each projector (see following pages) to achieve synchronous and continuously balanced screen motion.

Synchronized to this movement, by a magnetic pulse, the two slide projectors together formed eighteen high-contrast, full-screen images abstracted from the world of science but precisely related to the color images moving across them.

Their Scenes Helped in This Film

Many producing companies and individuals helped through cooperation on footage, including EB Films, Dr. William Harlow, McGraw-Hill Textfilms, Moody Institute of Science, National Film Board of Canada, National Board of Fire Underwriters, National Science Foundation, Charles Pfizer & Company, and others. *Infinite Horizons* left a memorable final impression on all who visited the U. S. Science Exhibit through all those exciting months.

nfinite Horizons" was the final phase of the United States Science Exhibit in Area 5 at Seattle. The screen brought "a scientist's ndom exploration of the processes and events of nature, its forms and structures, its micro and macro-worlds, color and texture . . ."

The United States Science Pavilion with its gleaming arches illuminated against the night sky.

Bringing the Science Show to Life

A Technical Storehouse of Valuable Experience Is Shared by Reevesound, Designers and Engineers of 50 Motion Picture Systems at Seattle's Fair

THE UNITED STATES SCIENCE EXHIBIT at Seattle was a portrait of the world of science, designed to communicate the connotations, the textures and the innate *joy* of science rather than its massive and often staggeringly complex discoveries.

Featuring a unique combination of science and art, the nearly twelve million dollar Federal Science Pavilion showed how science began with man's consciousness of nature and of nature's violent and tender phenomena, of how science developed from its first infantile inquiries to its current knowledgeable status and what the future of scientific endeavor portends.

Sight/Sound Wove an Enthralling Tale

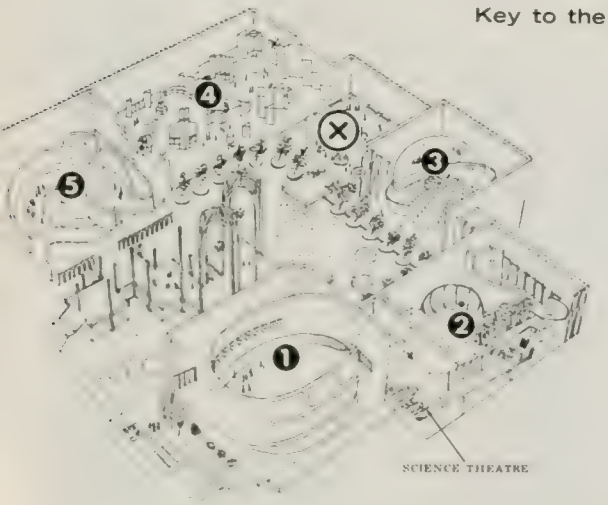
Fifty major motion picture systems were employed in strange and unusual ways to weave this enthralling tale. Designed and engineered by Reevesound Company of Long Island City, New York, these systems were scattered throughout the five building complex that was spread across six acres.

One of the most astounding examples of this wedded bliss of art and science was presented in Area I of the Pavilion. Here visitors were introduced to the Science Exhibit by an extraordinary film, *The House of Science*. This Charles Eames' production was shown through the use of a multi-image projection system which Reevesound president Boyce Nemec hailed as "our proudest achievement."

Science was presented in this Area as essentially an *artistic or philosophical* enterprise carried on for its own sake. "Here is the way that science has grown and is continuing to grow; here is science, diverse and broad, searching, wandering — grasping now as it has since the dawn of man's history — yet maintaining now, as in millennia past, a unity of purpose which is the acquisition of knowledge."

Treating the history of science as an architectural allegory, *The House of Science* film tol of this growth and unity of science. Three tho sand visitors an hour sat spellbound on t carpeted floor of a large softly-lit elliptical roo while a battery of seven interlocked Simpl XL 35mm motion picture projectors cast th film in vivid color onto a wide sweeping u framed wall panel of pure white acoustical pla ter.

Man started to build *The House of Scien* from the moment he first tried to understar the workings of nature . . . visitors were r minded when the film began as a single 16 x 23 ft. animated cartoon within a convention old-style movie format, representing the sta of the construction of *The House* at the birt of human history.



Ever since those meager beginnings, man ha added to the structure at a pace that continue to accelerate. Now, suddenly, as the centra picture faded away, the filmed image of *Th House of Science* burst into more brilliant colo

Art and Engineering Exciting Companions

☆ Called upon to participate with the U. S. Government's Staff in the creation of the Federal Science Pavilion at the Seattle World's Fair, the Reevesound Company, Inc., under the guidance of President Boyce Nemec, designed and engineered fifty major motion picture systems to convey the message desired by the United States Department of Commerce, sponsor of the Exhibit.

Working in close collaboration with architects, producers and the government from the initial planning stages, Reevesound engineered top quality systems to match each individual message presented in the Pavilion.

The result of this close association of technical and artistic talent is the beautiful Science Exhibit, hailed as the most ambitious undertaking of its kind. For the benefit of others who are interested in making the most of careful engineering techniques, the accompanying feature is presented.

Key to the United States Science Exhibit

1. The House of Science
2. Development of Science
3. U.S.-Boeing Spacearium
X. Jr. Laboratory of Science
4. The Methods of Science
5. The Horizons of Science

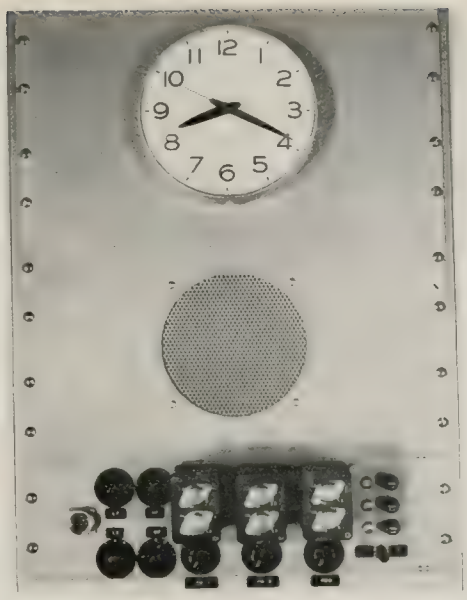
One of seven Reevesound/Simplex 35mm pro jectors in Area 1 (the Eames' show building) picture shows special motor drive system tha powers and interlocks all these machines.

gs and rooms were added as one screen el after another came alive — depicting the dition of many new specialized areas to the s of scientific knowledge.

his massive cartoon, consisting of six 16 ft. ft. images, arranged in two horizontal rows ree images, remained a moment filling most he wall. Then the multi-panels filled with uisite still photographs of distinguished sci-sts, places of research, interiors of labora-es, later combining with moving photo-hs to indicate the complexity, the diversity nowledge and the difficulty of making or-out of it. The thirteen-minute film closed all seven images condensed into one rep-nting the unity of purpose of scientific en-vor.

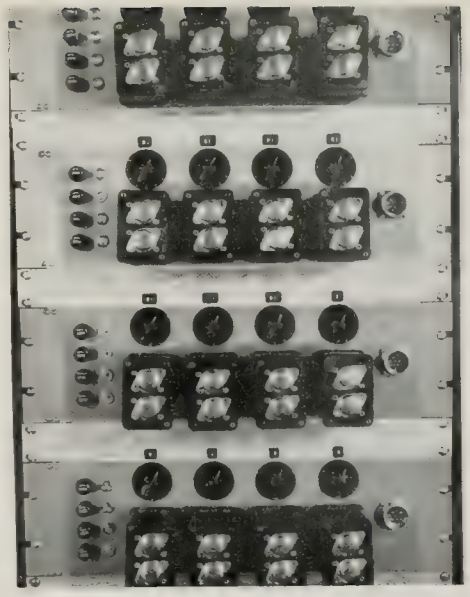
ut Bright, Vivid Images on the Screen

ix of the seven Simplex XL 35mm projec-in the motion picture system used in this entation were equipped with Bauer Xenon jection lamps. The seventh featured a Peer-Magnarc. Each machine had two drive ors — one being an induction motor and other a selsyn interlock. The one projector pped for sound had a Simplex penthouse oducer modified to play back two magnetic es on one of the seven prints. The two netic sound tracks were mixed in the booth heard in the auditorium from a four horn c Theater speaker system.



control station mounted on the front wall he booth included a "ready" light to indicate all machines were "on the line." One high acity motor control switch provided for trical interlock of all seven machines while cond made all units "run." Remote controls e included for simultaneous firing of the Xenon lamps and for simultaneous opera-of all seven changeover dowsers. The le carbon arc lamp was operated locally.

he surface of the acoustical plaster wall el, used instead of a conventional motion ure screen, was entirely diffusing and pic-brightness and color saturation were com-ely satisfactory. Brightness without film sured about 20 ft./lamberts, well above the stry standard. Picture prints were "ganged" per reel so that fourteen prints were on machine. Twenty-eight prints were in con-al circulation, one set being rewound while other was running.



Nature's Tender, Terrible Phenomena

eaving the dramatic introduction to the ibit which is *The House of Science* film, tors continued through Area I to a mas-display. Here, picture, sound and static uals presented the many tender and terrible ural phenomena of the universe. Great r screens depicted gigantic mountains lad-with snow, unending stretches of ocean, e rolling plains . . . *"Man's curiosity about world,"* these displays reminded, *"is first used by the forces of nature."*

he equipment in this group projected a le large volcano image suspended in space provided four different sound effects, in-ding crashes of thunder that accompanied brilliant lightning display. Three sound cts were reproduced from magnetic stripes the volcano picture film while the thunder

Control rack in Area 1: *Eames' show building, contains level and balance controls on front, power and distribution terminals at rear.*

Typical arrangement of amplifiers in multi-channel arrangement engineered by Reevesound for the United States Science Exhibit

emanated from a 16mm photographic sound track reproduced on a synchronous film phonograph which also triggered the lightning flashes. A six-foot rack contained the audio equipment for the sound tracks, the 16mm film phonograph and the timer to pulse the lightning flashes.

The projection machine was an automatic 35mm Simplex XL — operating at normal speed and projecting a 45 ft. continuous loop of color positive. The "thunder loop" was 12 feet long. All sound was reproduced with Reevesound electronics and Altec Lansing 605A loudspeakers. The optical reproducer was of special Reevesound design.

Man's Limited Senses Are Re-Created

In his attempt to observe more closely his universal environment, man soon realized the limitations of his natural senses . . .

On a ramp leading to Area II, the USSE visitor encountered a series of small displays which illustrated these limitations. One exhibit in this group demonstrated the limit of human hearing and included a 35mm color film from a 105 ft. loop. Three magnetic tracks on the picture film provided narration for the picture, the sound of the ding-dong of a railroad crossing bell and the sounds of a railroad coach clicking along the tracks. An automatic Simplex XL projector with a Bauer Xenon light source was used for this exhibit.

Two additional sound tracks were reproduced from two synchronous 16mm film phonographs. One provided sounds of a steam locomotive and the other the basic ding-dong sound for a doppler sound effects reproducer. All of these systems used Reevesound transistorized electronics of special design.

The steam train sound was reproduced through a synchronous "gating" circuit accurately timed to precede the bell doppler. Unique among sound systems was the bell doppler which duplicated the change of pitch of the crossing bell that is apparent to a passenger riding in a train.

Special synchronous "gating" facilities of high-reliability were developed to perform this interesting function. The steam train sound was fed to two speaker locations and the

Working Miracles of Sound

* * *

Right: *multi-channel sound system;* 16*mm optical track reproducer w/lightning flash timer.*

crossing bell doppler was fed to eight speakers which formed three groups.

A single rack contained the audio equipment for the sound tracks, the two 16mm film phonographs, and a timer to pulse the railroad car window lights. Adjustable electronic shutters commutated the two speakers in the steam train doppler and the three groups of speakers in the crossing doppler. A synchronizing pulse started the animation which simulated the lights of the railroad crossing passing by the coach windows.

Loudspeakers which reproduced the narration track were Altec 605A units. Other sound reproducers in this Audio Limits Exhibit were Altec 755C speakers.

To further illustrate the limitations of man's senses — two rear projection 16mm systems using Graflex Galaxy equipment demonstrated the visual result of high-speed and slow-speed motion picture photography.

Two interesting films, one of which was photographed at high speed and one at low speed, were shown on Trans-Lux screens which provided picture images of good contrast as they minimized reflections from adjacent displays.

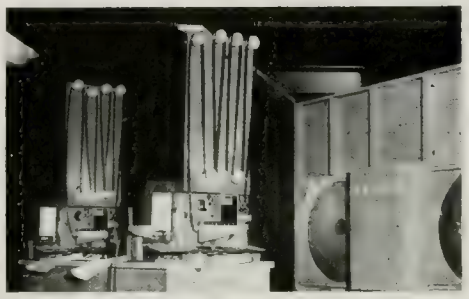
The two silent 16mm non-synchronous projectors used in this display were operated at normal light level. Picture loops 18 ft. in length ran continuously, repeating every 30 seconds.

Development of Science: Area II Theme

The USSE's Area II, devoted to the Development of Science provided glimpses of the history of science, beginning with primitive man in his role as first scientist.

Once man realized the limitations of his senses, he began to create tools to extend his senses and scales of comparison with which to communicate his observations to others. Thus, when man's curiosity of his environment led him to study the solar system, he found it necessary to create tools with which to more accurately perform this task . . .

Three brilliant color films told this story of man and the stars. Explaining the basic structure of the Solar system, these 33 ft. 16mm color films were of exceptional artistic and technical quality. They were shown — without sound — on three 16mm Graflex Galaxy projectors.



Motion Was Integrated With Stills

Great illuminated color panels depicted the Brazilian Rain Forests in which Charles Darwin studied living things in order to formulate his theory of evolution.

This display, symbolizing the renowned scientist's voyages on the "Beagle," integrated rear projection color motion pictures with rear illuminated color transparencies of "life size."

The motion of small animals was startling when seen in the center of a large static transparency.

Six 16mm Graflex Galaxy projectors, showing 6 ft. loops, were employed in this large exhibit area. Three were "silent" — and three of the machines reproduced the sounds of nature.

16mm loop projectors (Reevesound/Graflex) behind display showing image on a Trans-Lux screen. Lens is 3/8-inch focal length. Prints shown were copies of instrumentation films and had no sound tracks.

Because of its unique combination of still and moving images this was considered one of the most exciting exhibits in the Pavilion.

While Darwin showed how nature selected certain living things to survive and thrive, it took Mendel's experiments with sweet pea[s] indicate how nature effected its changes.

In this display, which featured the rem[o]able DNA molecule model, three rear-[pro]jected 16mm motion pictures, integrated [with] rear illuminated transparencies, illustrated [the] Mendelian theory of heredity. One 18 ft. [film] loop, *Mitosis*, shows a microscopy pic[ture] Two 54 ft. loops described and portr[ay] genetic transformations.

To Search Within This Hidden Wor[ld]

As man's curiosity about his world incr[eas]ed his need for more refined instrument[s] study increased. The microscope was inve[nted]

Illustrating the discovery and use of [the] important device, a 2" x 2" Spindler & Sa[uer] automatic slide projector presented a con[tin]uous show with 16 sets of three 35mm m[i]croscopy slide displays which illustrated the v[ar]ious effects of three different microscope mag[ni]fications.

One 16mm Graflex Galaxy projector [pre]sented a remarkable microscopy film sho[w]ing the motion of electrons. In this rear-sc[reen] presentation, the projector lamp was se[t] to "normal" brightness for maximum life.

An exhibit explaining visually the elem[ent]ary difference of time base experienced by b[odies] at rest relative to bodies travelling at the s[peed] of light required four 16mm Graflex G[alaxy] projectors operating at synchronous sp[eed]. Two were "silent" and two reproduced op[tical] sound tracks.

These machines, all of which projected [their] images on the rear of translucent screens, [were] equipped with four-minute looping racks [and] a photoelectric device to pulse animation. [Each] loop was 144 ft. long.

8mm For Youngsters: the Junior Labor[atory]

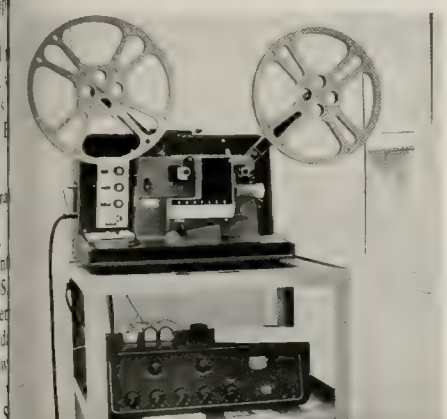
For youngsters eight to sixteen, [the] Junior Laboratory of Science adjacen[t to] Area III (which houses the giant U. S [Air] Boeing Spacearium) exhibited basic scie[nce] principles and techniques in understand[able] graphic terms. Included in this area, w[here] fun and entertainment reigned supreme, [were] a series of IBM Mathematical Peep [Show] Films (created by Eames) projected thr[ough] five 8mm sound projectors. These short [films] illustrate and prove basic mathematical i[deas]

Library of films for picture and sound l[oops] in U. S. Science Exhibit, Area 2 and Are[a 3]

Century 21 visitors view rear-lighted transparencies and rear-projected motion pictures shown here behind the famous DNA molecule model, a very popular attraction in this area.

ence films gathered worldwide were used daily showings in the Science Theater.

Science in the Future: the "Horizons"



What of Man's Future? This was the ques- posed in Area V, adequately called *The rizons of Science*. In this final area USSE tors were shown the universal motion of all gs, the continual state of change of science re new discoveries lead to new instruments, so, to new discoveries. Inseparably inter- ned with the future of man, in this area nce, "that form of intellectual entertain- nt and human joy," is "without bounds."

Three 16mm Graflex Galaxy projectors e used in this area, one synchronous and non-synchronous. In the symbolic en- nce picture *Motion*, which portrayed the ntific concept of motion as "an infinite, ural phenomena which is universal," the jector was operated on "high" lamp bright- s for maximum picture size.

Another 16mm Graflex Galaxy repeated the *osis* film which also appeared in Area II le a third, equipped with synchronous drive l a complex set of mirror optics, was used project a "free form" motion picture simu- ng the action in space of the United States os Weather Satellite complete with outrig- s. This machine was operated on high htness to compete successfully with the ly high level of room illumination.

Film loops on *Mitosis* and *Tiros* were 9 ft. ength while the *Motion* loop was 18 ft. long.

Two 35mm automatic Simplex XL projec- s with Bauer Xenon lamps projected two

ne of two Graflex Galaxy sound projectors the U. S. Science Theater, one of the out- nding attractions of Area 2 at Seattle.

exciting Francis Thompson films, *Faraday* and *Population*. These systems operated with synchronous motors and remote control starting. Each loop was 22½ ft. in length.

The *Faraday* picture symbolized the vast significance of man's ability to harness the power of electricity while the *Population* picture presented the concentrations that growing populations have forced upon man and his self-made environment.

The Multi-channel Sound System

A multi-channel optical sound track reproducer system, including voice channels and a music channel with a total of 541 loudspeakers, presented a spoken message to all visitors to the final display at the U. S. Science Exhibit that was a compilation of all that had been shown elsewhere in the Pavilion.

All is Motion: "Infinite Horizons"

This final film display consisted of two 35-mm images in carefully programmed motion on the west wall of the building, depicting the *Infinite Horizons* of science.

These images, projected with two automatic 35mm interlocked Simplex XL projection machines and Bauer Xenon lamps, were repro-

Two 35mm Reevesound/Simplex projectors using Bauer Xenon lamps, CinemaScope penthouse reproducer for magnetic control track scanning and two mirror optic systems powered by synchronous motors for dynamic motion. Control track provides signal pulse to two 3000-watt Kliegl slide projectors. System (four projectors) had total light output of 20,000 lumens to illuminate wall of Area 5.

duced from 360 ft. loops of Eastman color positive, and were programmed by two complex synchronous mirror optical systems of Reevesound design.

Orbiting simultaneously on an enormous screen in precisely controlled, synchronous patterns, this unusual and artistic motion picture display produced the effect of "a vast pulsating universe in which all things are forever mobile." Background slides were used with the moving images in this impressive presentation.

"Free Form" Cinema's Eventful Future

These concepts of motion picture images in dynamic motion on an enormous screen has been tremendously stimulating to many film producers who envision additional applications for this exciting departure into free form cinema in the eventful future.

Reevesound service shop in Science area

How Long Do Films Last?

☆ Reevesound President Boyce Nemec, long a proponent of technical quality, looking in retrospect at the successful United States Science Exhibit at the Seattle World's Fair, is more convinced than ever that when one combines solid, intelligent planning with careful engineering the results are certain to be a source of pride to all concerned.

"Take a well engineered projection system," he says, "add thoroughly professional operating skills and an effective maintenance program and out of the combination you will get maximum operating life for your equipment *plus* best possible film life."

"Although," he adds, "there is no way to predict the life expectancy of any particular print or roll of film, the statistical result of many projections has value to producers and film users."

From the experience of Reevesound's operations at the United States Science Exhibit, Mr. Nemec has selected the following facts to pass on to others interested in the projection life of films:

Feature prints in 35mm color were rewound on power equipment, inspected carefully every day, returned to the lab for cleaning and relubrication occasionally, and after 1,100 showings were still going strong!

Loops of 35mm color were run continuously. They varied in length from 22½ feet to 360 feet. The shorter ones routinely yielded in excess of 2,500 passes without seriously increasing the danger of a lost show. The longer loops regularly gave 1,000 to 1,500 passes before being retired for the sake of appearances — scratches, dirt, etc.

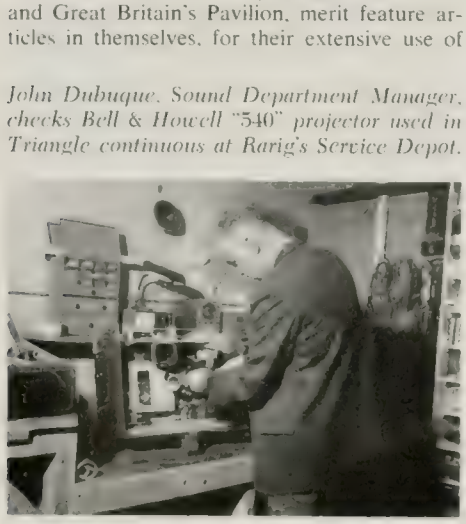
Loops of 16mm color varied in length from 6 feet to 144 feet and were run in a variety of environments. Some remained clean for days while others had to be replaced daily because they got dirty or scratched. Either way, it was routine for these films to yield reliably 4,000 to 8,000 showings and then be removed without operational failure.

"What all of this means," Nemec says, "is that *film life is largely a function of careful management.*"

His final advice: "Take good care of your technical plant and have regard for the nature of film — and you will be able to count on a very good show virtually all of the time."

Cameraman Eugene Borghi with world's largest cinematic lens used by Fine Arts Productions to create film for Boeing-Spacearium Theater.

A-V Service Kept Their Shows on the Road



The "Behind-the-Screen" Story of Audio-Visual Maintenance at Century 21

A Business Screen Special Report
by Max Rarig, President, Rarig's Inc
and David Christensen

THE SEATTLE WORLD'S FAIR played host to over 10 million people since its opening last April. These fair visitors saw what may be called "the greatest audio-visual demonstration ever presented," for, considering the acreage, there was more audio-visual equipment on the Fair grounds, used in more unusual ways, than had ever been assembled in such an area before.

Such displays as the Washington State Theme Show (the Bubbleator), the U. S. Science Pavilion, National Aeronautics Space Administration, Bell Telephone, Standard Oil, and Great Britain's Pavilion, merit feature articles in themselves, for their extensive use of audio-visual techniques, many of which were developed especially for their exhibits, was both *extensive and exciting!* In this feature, we have selected some high points and will discuss some of the problems which presented themselves during these eventful months just past.

John Dubuque, Sound Department Manager, checks Bell & Howell "540" projector used in Triangle continuous at Rarig's Service Depot.

Contract for Fair-Controlled Exhibits

In January of this year, Rarig's, Inc. of Seattle, and the Seattle World's Fair entered into an agreement which made Rarig's the exclusive audio-visual consultants and service company for Century-21 Exposition, Inc.

This contract applied only to exhibits which were under the control of the fair itself, and not to all the exhibitors on the grounds. But as the fair began to take shape, a large proportion of the independent exhibitors contracted with Rarig's to provide them with service of one sort or another, including installation, preventive maintenance, emergency service, and supplying projectionists.

While Rarig's did service some of the mechanically-animated exhibits, this article will be concerned with audio-visual displays which used film, both motion picture and slides, and sound, both with and without pictures.

Films Ranged from 70mm to 8mm!

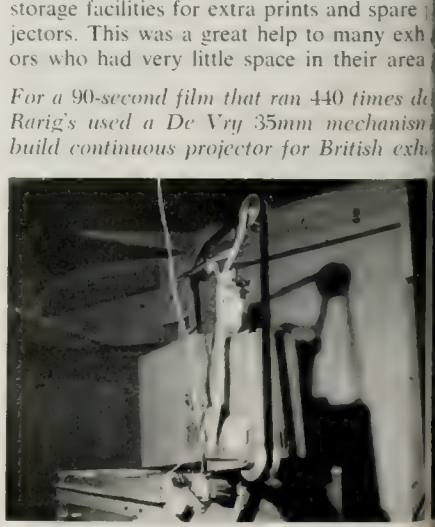
The contrast of equipment used at the Seattle World's Fair was just about as extreme as one can imagine; In the U. S. Science Pavilion alone, film size ran from 70mm motion picture film (used in the Boeing Spacearium) to 8 continuous sound projection found in the dren's section.

In slides, there was 35mm, which was in 2 x 2 mounts and film strips with se filmstrip loops. There were also 2¼ sq and 2¼ x 3¼ slides projected in a variet situations.

Sound systems on the grounds were varied and ranged from ¼" single track ta 4 track stereo ¼" tape with the tape pro ing the control of the exhibit through r actuated by inaudible signals.

16mm magnetic sound stock was also at the fair, in the French Exhibit. This 16 base carried three sound tracks and a fo control track which controlled the lights speakers.

Service Depot Right on Fairground

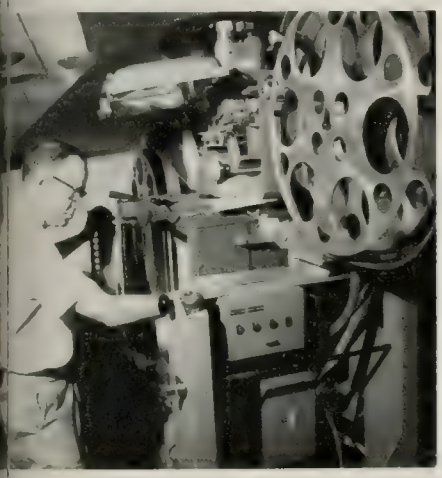


In order to provide efficient service, Ra opened a service depot on the fairgrounds before the fair began. This depot was a c pletely-equipped audio-visual repair ce stocked with spare parts for equipment use the grounds, lamps in case quantities, and tools and test equipment necessary to perf even major repairs.

Two phones were manned twelve hou day, including Saturdays and Sundays. The son who answered the phones was respons for taking any repair orders which were c in, and posting the jobs for the repairmen

To further facilitate speed and efficie each of the repairmen carried a Bell Telep Bell Boy, a device about the size of a po transistor radio. When the depot wanted to ify the serviceman of a job, they would di special telephone number which caused the pairman's Bell Boy to ring. The repairman called the depot and picked up the mess This device alone saved countless hours, to mention unnecessary walking for the re men. It also made exhibitors very happy wh repairman turned up just a few short min after the call to the depot.

The depot also provided exhibitors storage facilities for extra prints and spare jectors. This was a great help to many exh ors who had very little space in their area



For a 90-second film that ran 440 times d Rarig's used a De Vry 35mm mechanism build continuous projector for British exh

cage. It also provided them with a system for eping track of their prints and equipment.

Rarig's assigned one person daily to perform *reventive maintenance* on equipment under reventive maintenance contract. This service-an spent his entire shift maintaining 16mm rectors, slide projectors, and tape recorders. 6m projectors were cleaned and lubricated ry day as required; the humidifier (found nost continuous projectors) filled, and bulbs laced just before the normal life was over. lide projectors and tape recorders were simi-w serviced biweekly or weekly, depending heir use.

This preventive maintenance program cut dwn" time to a minimum. For not only did eep the projectors and soundsystems running nothly, but bulb burnout, except in rare in-nces, was eliminated. The maintenance pro-

Treading up the big (70mm) Spacearium ojector, specially built for this show. Verti-l projection covers 180-degree hemisphere: izontal projection went full 360-degrees.

m also provided a chance to note any unusu-wear which might cause a general break-wn of equipment later.

n addition to the preventive maintenance, o men answered the emergency calls. One of se men was a specialist in projection equip-nt, the other a specialist in sound and elec-hics. Emergency calls ranged from bulb burn-to major repair problems. These men were sponsible for getting the exhibit "going" in, as soon as possible, for nothing made an hibitor more unhappy than to have part of display "down".

Print Care Was of Primary Importance

Print care was an important activity of the vice depot, for prints which run for 12 hours lay, 7 days a week log in as much or more jection time in a short period as prints in rmal use do in a year.

To maintain good print condition, Rarig's de arrangements to send prints to a local n cleaning and treating company which was perienced in the requirements for treating n used in continuous projectors.

This firm would pick up prints from the de-t, and return them the following day. By aning and treating the film regularly, break-age and tearing in the projector was almost completely eliminated.

It was also found that by using butt splices with Mylar splicing tape on all films for continuous projection, there were few problems of splices wearing out or getting stuck in the projection gate.

This also made it possible to break loops in preparation for cleaning without losing two frames, which is the case when hot splices are used; a very important item in multiple-sync projection.

Xerox Theater Used Busch Equipment

This light source has a rated life of 1,800 hours and is almost as bright as the arc. These bulbs are made in Germany.

Xerox used six Busch projectors in their film *Library* 21 produced by Visualscope, Inc. of New York. Xerox joined with the American Library Association in a joint exhibit for the fair. Using a circular theater, the projectors were located in the center of the room, with three projectors projecting on one side of the circle (similar to Cinerama, except the pictures don't meet) and a duplicate set on the other side.

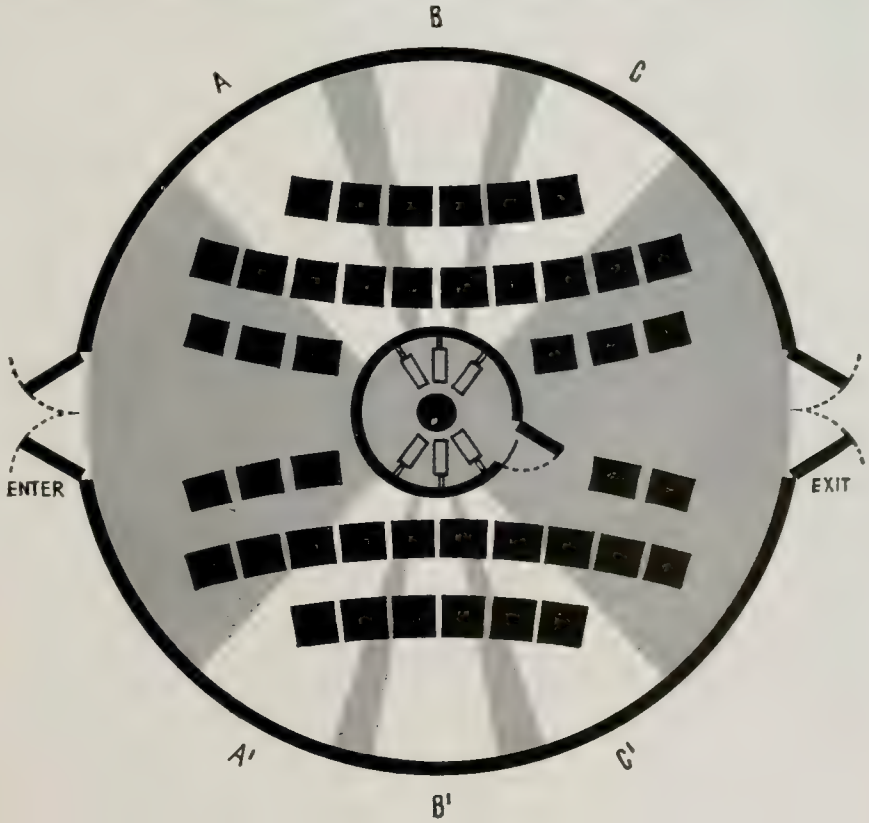
The projectors were held in sync mechanically by a series of geared belts. A film break in a system of this sort was costly from a time standpoint, for to keep the show in synchronization, it was necessary to slug the broken print with black leader to make up for the number of frames lost, or, cut the other five prints to match the shorter sixth. Here again, regular cleaning and treating of prints proved to be one of the most important aspects of this exhibits preventive maintenance.

DuKane Projectors in Brittanica Show

Encyclopedia Britannica made interesting use of several DuKane sound slidefilm projectors. They presented a Cinerama-style slideshow, using three auditorium-type DuKane projectors (Model 576-39), projecting on a curved screen.

Seattle visitors await next showing in Xerox Theater of the Visualscope-produced "Library 21" film, a hit attraction at Seattle.

The sound, in stereo, and the projector and lighting controls were provided by a Viking ¼" stereo dual channel tape recorder.



The Bell Telephone exhibit featured two rear-projection "Triangles" interlocked together projecting their film, *Serving the Nation*, which discussed communications in time of emergency. The two projectors were powered by a common synchronous motor which drove the projectors through a flex-cable. This system used two Bell & Howell sound projectors, Model 385's.

Relays Controlled by Tape Recorders

The use of dual-channel tape reproducers for control of relays was quite common on the Fair grounds. By using the second channel as a control channel, with a silent signal to actuate relays, these tape recorders controlled lights, slide shows, and started other equipment.

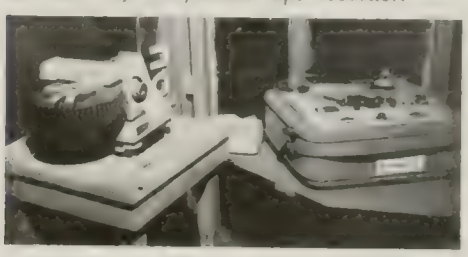
In the Xerox Exhibit, a tape recorder controlled lights which change color and intensity

Diagram shows how Busch continuous projectors (six in center booth) beamed the "Library 21" show to audiences at each side of the novel circular Xerox Theater.

Nalley's Inc. "free form" building included a 113-seat theater where the film "Magnificent Northwest" attracted large audiences each day.

SEATTLE A-V SERVICE:

in relation to introductory music which preceded their film. At the conclusion of the music, the tape recorder turned on the projectors.



In the West Berlin Exhibit, there were two sound slidefilm presentations. They used a Liesegang Slide Projector, which has a circular slide magazine, controlled by a Telefunken Tape Recorder.

Extraneous noise in the signal track caused quite a bit of trouble in the tape-controlled equipment. In one case, the extraneous noise was so insignificant that it could only be detected by an oscilloscope, yet it was enough to occasionally wrongly trip the slide projector coupled to it. It was necessary to re-record the sound with an extremely low signal to noise ratio on the control track.

Preventive Maintenance to Save Shows

With tape systems, as with motion picture projectors, *preventive maintenance was important*. For here again, the machine ran more in a day's time than the average machine does in many weeks! Particular attention was paid to the heads, which needed cleaning weekly or biweekly, depending on the hours the machine ran. As was the case with all equipment on the grounds, the tape machines tended to get dirty quickly from the large amounts of dust which was continually stirred up by passersby.

Sound slidefilms were shown in West Berlin's exhibit on German Liesegang slide projector w/sound by Telefunken tape recorder.

Adequate cooling was another major factor in many of the exhibits. While the equipment was made with adequate cooling systems in themselves, designs of many displays didn't allow this cooling system to function efficiently.

In one case, a projector was mounted up near the ceiling in a black box. While the box had cooling slots in it, it was far from sufficient to allow the blower to draw in enough outside air to cool the projector mechanism.

Heat Is a *Major* Factor to Consider

Within a few short weeks after the fair opened, the projector had burned out an expensive changing motor, for the heat in this box achieved inferno proportions.

Another exhibit was even less fortunate, for they had a motion picture projector operating in an inadequately-ventilated display. Before it was realized what was happening, the projector had caught fire, and caused 200 dollars damage to the machine, and surrounding display!

This problem was further amplified when the hot weather came, with average temperatures up 10 to 15 degrees.

Then equipment which had been running well until then suddenly developed problems. Tape decks which had amplifiers under them would become victims of the heat from the tubes. The tape would get hot, and start depositing its graphite lubricant (used in continuous tape cartridges) on the capstan and the capstan idler.

If the situation persisted, the heat would even warp the plastic cartridges used for most of the continuous tape presentations!

From these experiences, we strongly recommend that anyone who may become involved with displays of this type, *do everything in their power to provide all the cooling possible.*

Automatic Signal Alerts Service Depo

Rarig's made available to exhibitors an a matic signaling device which would light a in the service depot when a projector had b en down.

Using lines provided by the telephone c pany, a photo electric cell was installed position which would register the light f the equipment's projection lamp.

If the projection lamp went out for any son, it would close a relay, lighting a signal on a panel in the service depot. The depot would dispatch a repairman to the exhib check it out. This made it possible for n exhibits to operate without an attendant.

When this system was first installed, it found that (here again) heat presented a p lem. For the photo-electric cell would ab the heat of the bulb, and burn out.

To solve this, a solid plastic pipe was to carry the light away from the machin was found that by bending this pipe so that photoelectric cell was along side the proje instead of on top, a piece of pipe about foot long would be adequate for protectio the cell.

C & H Sugar's "Automatic" Theater

C & H Sugar featured a theater which sented a film on Hawaii. Their theater was e tronically-controlled by a time clock w turned on the projector, dimmed lights, at the conclusion of the film, stopped the jector and turned up the lights again. It waited seven minutes before starting the show to allow time for the house to clear let a new audience in.

C&H had Rarig's install an automatic sig ing device and this, coupled with the autom timer, allowed the theater to run without tendants, except for starting in the morn and shutting down in the evening.

Bulb Replacement: Take a Look Aheac

Several exhibitors neglected to figure b replacement into their budget for the fair. if a bulb is rated 25 hours, it had to be cha ed every other day, and this amounted t good-sized sum at the end of six months.

Rarig's recommended the change of the b just before the end of the expected life. T worked out quite well, for then, "down" t because of bulb burnout was almost elimina Some of the exhibitors found that in "sh throw" situations which were in relatively d areas, substitution of bulbs extended life, therefore cut costs.

By substituting a DGH for a DEJ in Bell & Howell 540 projector, the life of the b was extended from 25 hours to 500 hours! West Berlin Exhibit found this bulb gave a quate illumination for a projector which used for rear projection in a dark room, in two other machines, they used a DDY wh gave 300 hours of life, with a higher light le

Some of the other exhibitors also found change worth while, but most needed all light possible, and couldn't sacrifice lost l for the savings involved.

There were many unusual adaptations of dio-visual equipment on the grounds. French National Exhibit brought a Fre Hortson 16mm projector fitted v

ench National exhibit featured a Hortson ojector; sound was 16mm magnetic (at top) ich also controlled lights and speakers.

htinuous doublesystem to project their six-nute show. The sound was on separate 16mm gnetic film, which also fed information to re- controls which set lights and controlled akers.

Film Version of the Zeiss Planetarium

The Boeing Company presented the Boeing acearium in the U. S. Science Pavilion. This s in effect, a modern film version of the Ziess netarium.

Using a 70mm film with a circular aperture, the picture was projected on a domed ceiling. The lenses were especially made for the Spacearium by the Fairchild Camera and Instrument Corp. and designed by Felix Bednarz, with the projection system by Benson-Lehner Corp. These projectors pointed straight up and, because of the large aperture, the film travels at the astounding rate of 282 ft/min!

This speed wore prints rapidly, but with proper care 500 runs could be obtained on one print. The film stock was also specially made for the show by Eastman Kodak.

Rarig's personnel made a special adaptation of a 35mm motion picture projector for the Great Britain Exhibit. They had a 90 second film which they wanted projected continuously. We took a DeVry 35mm portable projector, and built a loop system into its base to accommodate the slack footage. Because the film ran through 440 times a day, it had to be changed every other day!

Washington's Unusual, Complex Show

The Washington State Theme Show (the "Bubbleator") had one of the most unusual and complex audio-visual presentations at the fair.

This exhibit involved 5 continuous 16mm projectors, 8 tape decks, 206 lighted still transparencies, and was controlled by 600 separate microswitches activating close to 400 relays.

The show was in the form of a long circular hall, and the audience was drawn through by the lights and sound. It took 21 minutes to go

(CONTINUED ON THE FOLLOWING PAGE)

SEATTLE A-V SERVICE:

through the exhibit, and groups were spaced about four and a half minutes apart.

This means that there were as many as 5 groups going through at the same time. The microswitches were mounted in racks in a control room and were actuated by cams. These cams were driven by 39 synchronous motors.

During the first few weeks, it was found that the synchronous motors which had slightly different loads, would coast after the power to them was cut. Each one would coast differently, depending on the load, putting them out of position for the next run.

It was therefore necessary to undertake the tedious task of adjusting the load on each of the 39 drive motors. After this, the system ran quite smoothly.

Fair Visitors Enjoyed Those Theaters

Theaters which allowed the audience to sit down and to enjoy a good film were quite successful at the fair. Our Film Production Division created a film for the Forest Products Industries titled *A Tale of Two Planets*, which ran successfully in the specially-built Forest Products Theater.

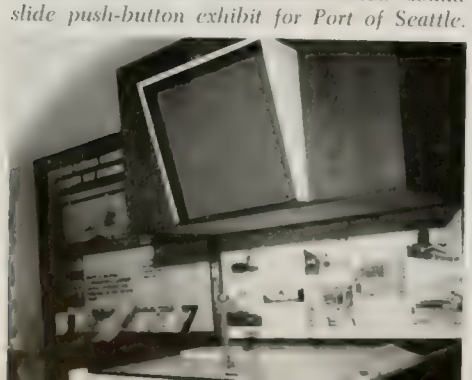
The film used as it's theme two Martians looking for wood, (there are no trees on Mars you know!) and a girl from Earth who lands on Mars. The Martians brainwash the Earth girl for information about her orange wood stick (used in manicure), rayon blouse, and other wood products she has with her.

It proved to be a successful film which entertained the large crowds which regularly visited this theater.

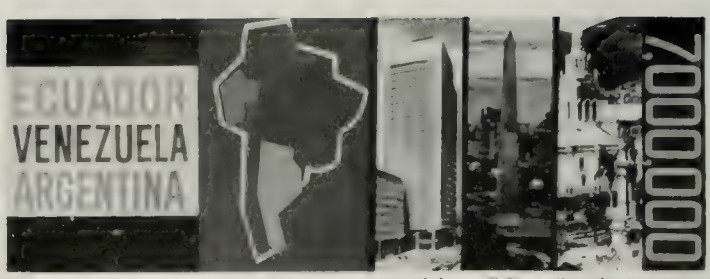
Nalley's Had an Egg-Shaped Auditorium

Nalley's Inc. built an unusual theater on the grounds. The auditorium was egg-shaped, with the bottom flattened and sloped towards the screen providing the area for seats.

Nalley's showed the film *Magnificent Northwest* which showed the viewer the spots which should be taken in when visiting Washington and the adjoining states.



This film was well received, particularly by the great number of tourists who come to the fair, many of whom were visiting the Evergreen State for the first time. The audience was also given a printed guide to these spots with a Nalley's soft sell message with it.



The theater played to full houses the great majority of the time. The film was projected with Bolex 16mm sound projectors.

Audience-actuated exhibits were very popular on the fairgrounds. One such exhibit was provided by the Port of Seattle, for whom we built

(CONCLUDED ON PAGE SEVENTY-THREE)

Rarig's built this audience-actuated sound slide push-button exhibit for Port of Seattle.

ABC International's World Market View

American Broadcasting Company Subsidiary Serves 14 Million Sets in 17 Na

ABC INTERNATIONAL TELEVISION, Inc., a lusty young subsidiary of the American Broadcasting Company, is now serving 14 million television sets in 17 nations around the world. "This is only the beginning," said Donald W. Coyle, president of the company, in an announcement presentation last month. "Our over-all goal is the creation of a world-wide broadcasting network of active associates — and we are only on the threshold of the future."

Mr. Coyle was speaking at a breakfast entertainment presentation in the Royal Ballroom of New York's newest hotel, the Americana, before several hundred leaders in the international broadcasting world, the advertising community, industry and government.

Presentation Filmed by Visualscope, Inc.

The presentation, *ABC Worldvision — Your Passport to the Future*, was filmed by Visualscope, Inc., and depicted the development of television from its beginnings to the present era of unlimited international possibilities.

To tell this hour-long story of ABC International's global network, Visualscope prepared a stunning visual presentation incorporating some 225 widescreen slides, over 14 minutes of 16mm motion pictures, integrated with live dancers, live narrators, and Mobilcolor sequences.

The audience in New York's newest big meeting hall saw two narrators, Mr. Coyle and Jack Singer, ABC International's Network Manager, speaking in tandem from spotlit lecterns while bright photographic and art slides illustrated their comments on a wide screen extending across the stage.

Companies Must Think of *World* Market

ABC International's message is that the revolution in communications, transportation and commerce has changed our way of thinking in almost every area of life. The entire concept of marketing has undergone a major revision. Where companies once thought of domestic and international activity, they now think in terms of global activity. There is one market — the world market.

Mr. Coyle noted that estimates indicate half of all agency billings will derive from international activities by 1970. "There are 80 television nations in the world today," he said. "Already more than half — 47 — offer some form of commercial television."

Backstage, Visualscope's Bob Taylor, Manny Rey and Marvin Green supervised the intricate details of the show which amalgam many different kinds of audio and visual n Despite the problems of working on a second timing schedule, the whole per ance went beautifully from start to fini

Stages were set up in front and in of the wide rear projection screen so dancers, illustrating ABC International filiates in Lebanon, Latin America, Aus and Japan, could appear in costume slides of their native countries, while dancers seen behind the screen as Mobi "shadows" could appear as if au naturel

lexaco's Dealer Show

Two Training Films Created by Audio
on Station Care; Improved Motor Oil

PONSOR: Texaco Inc.

ILES: *Are We Kidding Ourselves?* 12 min, bor; and *A Major Scientific Breakhough*, 20 min, color, both produced by idio Productions, Inc.

Oh, wad some power the gifties gie us
To see oursels as ithers see us!

Texaco has borrowed a couplet from bert Burns to lead off the narration of *t We Kidding Ourselves?*, a new trainfilm for dealers, urging them to keep ir stations clean and inviting.

Texaco says all of us kid ourselves a te bit about our own appearance (like l Dad here — doing the Rock and Roll a teen-agers' party), or about the way places of business look (like this wzy hardware store, or this sloppy superrket), but let's cut the kidding for a minutes, step back and give our own ions a good hard look — are they painted cleaned up to look really inviting?

Putting ourselves in the other man's es for awhile, we can recall how we ht have felt at sloppy waiter service, or unkempt barber. It is sometimes the le way in a service station if we don't ch it carefully.

Texaco is making a gigantic national efto have the thousands of Texaco staas in 50 states *sparkle*. One poor staa can hurt all the others; while every rkling station does all others good.

Major Scientific Breakthrough describes ew improved motor oil that Texaco lers are now selling in their sparkling ions. The film is intended to convince lers they have a jump on competition.

Havoline, Texaco's top grade oil, is now ipped to beat the "stop-and-go driving aboo" that has long plagued the autobile industry. Those short trips place a vy burden on motor oil, because its job to hold engine contaminants in suspenn until the oil is changed. If it can't, contaminants settle out and stick to ves, pistons, lifters and cylinders and se all sorts of trouble.

For convincing proof that Havoline can d the contaminants, the film travels to amboat Springs, Colorado, for three nths of below-zero stop-and-go tests of identical new cars — some with Havoline their crankcases, some with major comitors' oils. Another series of tests were d simultaneiously on the hot-dry plains Texas at Uvalde.

At the end, we get a good look inside the gines, and see that Havoline does the job keeping engines much cleaner, as adverd.

Are We Kidding Ourselves? and *A Major entific Breakthrough* were produced and ected by Audio's Les Bennetts.

"Human information speeds across the miles, obstructions in its path outflanked by human skills." Scenes in Bell picture "Her City."

The Human Side of Your Telephone Dial

The Bell System's Picture of "Her City" Gives Operator a New, Challenging Outlook

SPONSOR: The Bell System.

TITLE: *Her City*, 27 min, b&w, produced by Henry Strauss & Company.

☆ Dawn breaks softly over the City.

Lights blink sleepily as, with a great collective yawn, the people brace themselves for a new day.

A single car emerges from a suburban driveway . . . mingles with a hundred, then a thousand others. The sound of footfalls become brisker, activity stirs the streets to a sharper pulse-beat. Buildings thrust from shadow into light.

We are watching a small segment of an "act of faith" that is performed by each of us each day . . . faith that "the roads we take to work will take us home again; that bridges will bear us safely over rivers; that our hunger will be fed; our thirst quenched; that no evil will befall us."

Look With Fresh Eye at Special People

Thus are we introduced to *Her City* . . . a new motion picture produced for the Bell System by Henry Strauss & Company. And thus are we made to look with a fresh eye at some special people who provide a vital part of the foundation on which our daily "acts of faith" are built.

For the "she" of *Her City* is the telephone operator . . . and from this opening develops a film about her and her job that is realistic in theme and characterization . . . impressionistic in narrative and visual imagery.

The Strauss organization was commissioned to produce *Her City* because of a contradiction that is one of the subtler sideeffects of automation in *many types* of industry.

Tools That Free Her for New Challenges

At the operator's fingertips, and under her control, are millions of dollars of expensive, complex equipment. Mechanization has rapidly removed the routine, freeing her for the interesting and the challenging.

She deals with the public in a capacity requiring tact, judgment, insight, ability to make decisions, and willingness to take responsibility. As telephone communication becomes increasingly automated, there is increasing need for the so-called "human touch" . . . warmth, understanding, concern for the customer.

Her job is a key one in her company . . . and she has an emergent awareness of this *fact*.

Yet in the mirror of *public opinion*, the operator's image is often sadly distorted. Many outsiders see her as a "non-person" . . . a voice without a face, a minor mechanical element in a vast apparatus. Realistic or not . . . such feelings contain the seeds of serious problems in morale, turnover, and recruitment.

An Antidote for Operators and Public

Her City should provide a healthy antidote . . . for operators and for the public. For it is "informational" in the sense a documentary film should be . . . designed to translate *facts* in terms of *feelings* its audiences will share; and hence recognize as important and valid. The work of the operator is shown so that we know *why* she has chosen this work and seeks to develop the skills it requires.

Through a series of vignettes . . . some played in toto, others in quick visual, a scrap of dialogue . . . we see the lights on her switchboard as truly the lights of the city. We go where her voice goes . . . to the city's furthest limits now pushed by the expanding interests of its people across the nation, across the world.

A 19-minute "Valentine" That's Earned

Sometimes down-to-earth, sometimes lyrical, *Her City* is a nineteen-minute "valentine" to a woman who would appear to earn it three-hundred-and sixty-five days of the year. But there is interest here for many audiences, because in it is a slice of all our lives and of the daily "acts of faith" that make it possible for us to live as we do.

"Each morning, we perform an act of faith. We trust that the roads we take to work will take us safely to our homes at night . . ."

"In the mind of man, design is response . . .

. . . to needs, conditions and aspirations."

Color Portrait of Canadian Wood Products

Design Is Motivating Theme in a Good New Film from Crown-Zellerbach of Canada, Ltd.

SPONSOR: Crown Zellerbach Canada Limited

TITLE: Canadian Portrait, 28 min, color, produced by F. K. Rockett Productions.

☆ The story of trees-to-timber-to-something-else has been told before, but not often with as much benefit from nature's abundance, and too seldom from a Canadian viewpoint.

Taking the theme "In the mind of man, design is response to needs, conditions, and aspirations," the picture points out that design is planning — taking separate shapes and forms and blending them into an integrated and meaningful composition. It is noted that design may be seen in the living pictures painted by nature and, as planned, in the good things men have built — panoramas of great cities and the ordered patterns of a nation's industry at work.

View of People and Their Creative Work

Canadian Portrait, stated as one of many which may be seen, is a well-placed and pleasant view of the meaning of the country's western forestlands, the people who plan its use and who convert its products, and of the designs and patterns created by the process of conversion. As proudly depicted here, out of the forest come kraft and waxed paper; newsprint, Canada's largest export; corrugated board; plywood; lumber.

With effective understandment, this also is a portrait of the sponsor as a moving and vital force in the Canadian economy. Though it is sometimes visible on the screen, only rarely is the Crown Zellerbach name mentioned. Adroitly, the "corporate image" is stated in the narrator's conclusion: "The design . . . that cannot be seen, (but) can only be understood and felt, (is) the conscious knowledge that this overall corporate design must be in the public interest as well as its own, that an industry founded in the historic past, working in the present, and planning confidently for the future will continue to benefit our nation and our people."

Another design scene in "Canadian Portrait"

Nine Companies Share the Title Credits

The nine companies which make up Crown Zellerbach Canada Limited, producers of lumber, pulp and paper, building materials, and operating a railroad and a tugboat line, shared opening title credits, and played their own appropriate roles in the pictorial material.

Given the U. S. Department of Agriculture's "Award of Excellence" at the recent Centennial Film Festival in Washington, and recipient of a certificate at the Columbus Film Festival, the film was narrated by Lorne Greene, who plays the role of "Father" on *Bonanza*. A French version was narrated by Roger Baulu, distinguished Canadian Broadcasting commentator.

The Men Behind the Production Line

Produced by John J. Hennessy from a script by Charles Cromer and Walter Wise, *Canadian Portrait* was directed by Jean-Philippe Carson, photographed by Alan Chandler and Charles Linko, and edited by Kent MacKenzie. Music was done by E. C. Norton. Glen Holse was the art director. Animation is by William Selleck.

"Pictures of the Year" Next!

☆ Issue Eight of BUSINESS SCREEN will review the year's best in sponsored films including the winners of 1962 awards programs in all fields. Coming at year's end . . . watch for it!

A System for Housekeepin

"Efficient Industrial Storage" for More Profits Through Stock Contro

SPONSOR: Vidmar, Inc.

TITLE: *Efficient Industrial Storage*, 20 m color, produced by Farrell & Gage F

☆ The standard description of a plain, tory type industrial film has long bee "nuts-and-bolts" picture. Here is a "n and-bolts" picture that is literally *about* and bolts and other sometimes loose t and parts.

Entitled *Efficient Industrial Storage*, film presents a storage system designed o modular basis that provides a custom proach to the storage requirements of

Modern industrial storage is film's theme

industrial plant. Vidmar sponsored the f to help management analyze the effects disorderly industrial housekeeping w visualizing specific means for correc them.

The film shows how the Vidmar stor system eliminates the problem of high paid production workers standing idle cause vital tools and parts are difficult find and, at the same time, provides a p fect means for preventing pilferage, l and damage of expensive equipment. tual installations show how the system fac tates perfect inventory control for such ite as tools, gauges, fixtures, instruments, co ponents, accessories, assemblies and co parable equipment, (as well as nuts bolts), besides achieving substantial savi in storage space.

Efficient Industrial Storage demonstra that hard working nuts and bolts pictu can be handsome as well as sensible.

Showings of the film can be arran through Vidmar, Inc., 2323 Reach Ro Williamsport, Pa.

Agriculture's Centennial Film Awar

☆ Late arrival of pictures has carried ove special report on the Centennial Film Awa of the U. S. Department of Agriculture.

Full details on the prize films of Ru America, pictures and a list of entries appear in these pages next month. A Farm F Guide based on this program is being prep ed for early 1963 publication.

THE INDUSTRY FILM JOURNAL
National News-Letter of the Industry Film Producers Association

180 Attend Southern California's Program on Videotape Production and Techniques

THE LARGEST ATTENDANCE in the history of the Southern California Chapter — 180 members and guests — turned out on October 30th for a program featuring contemporary Videotape production facilities and techniques at the KTTV Studios in Hollywood.

The presentation was made by John Vrba, Vice-President and Manager of KTTV Productions, a station affiliate, and members of his staff.

Show Facilities and Techniques

Both technical facilities and production techniques were described during the two-hour program which featured the presentation of representative taped shows. The use of Videotape as an original recording system, combined with film as a release medium, was described. Advantages of this production system for certain types of low-budget briefing and informational presentations were outlined by Mr. Vrba.

Electronic equipment exhibited and explained included the high-resolution British Marconi cameras. A wide selection of low-cost, electronic special-effects techniques were displayed and explained.

Following the formal program, IFPA members were invited to tour the extensive facilities available at KTTV for both Videotape and film production. General discussion of these techniques with Mr. Vrba and his staff continued informally during refreshments served on Stage Three.

Above (l to r): National president Gene Burson; KTTV vice-president John Vrba; and chr. Gene Huggens of local chapter.

An Opportunity to Meet, Chat

The large turn-out provided a fine opportunity for the Southern California membership for "shop talk" and to renew acquaintanceships.

The KTTV session was one of a series of fall and winter programs planned for the Chapter by Program Chairman Brent Inman. These events are intended to explore contemporary production practice, emerging techniques and to provide new perspective on industry film production. Early programs will be devoted to special effects and to 8mm sound.

Member Everett Stone receives top door prize from KTTV's Ron Woods at October 30th meeting . . . a two-day vacation for two at Las Vegas! Session on tape production was attended by 180!

Film Library Service Available to Chapters

THE ESTABLISHMENT of a new IFPA Film Library Service, made possible through the efforts of Past President Bob Gunther, has been announced by National President Gene Burson. Purpose of the library is to make available to Association Chapters the best of current industry film productions selected each year for the annual "Cindy" awards.

The availability of such outstanding IFPA productions will not only provide program material for our widespread regional chapters, according to Gene Burson, but also affords us an opportunity to achieve greater penetration into nationwide management circles.

Fulfills a Basic IFPA Goal

In congratulating Bob Gunther for the establishment of this service, Burson noted the fulfillment of a basic IFPA aim: "to encourage the exchange of ideas, techniques and problems involving the motion picture medium for the benefit of all members of the profession" . . . which was set up as one of the Association's original objectives.

The following titles are currently available for Chapter loan:

(1) *Aerospace Medical Research at Hollman*, produced by the Air Photographic and Charting Service (MATS), Hollywood.

(2) *X-15 1960 Annual Report*, produced by North American Aviation, Inc., Los Angeles Division.

(3) *Corrosion in Aircraft*, produced by Douglas Aircraft Company, Inc.

(4) *Korea — Battleground of Liberty*, produced by Air Photo-

ard Announces Election of Eugene Burson as President

mbers on Committee, Jury e "Film as Communication"

Among the pre-screening jur-for the recent San Francisco ternational Film Festival (see re-rt elsewhere in this issue on alists and winners), were mem-rs of IFPA's Northern California apter. They also served as mem-rs of the "Films for Communica-ns" awards committee.

graphic and Charting Service (MATS), Hollywood.

(5) *It's a Matter of Business*, produced by Lockheed, Georgia Division.

(6) *Wings for Freedom*, produced by Lockheed, California Division.

(7) *Aerospace Force Communications — The Reins of Command*, produced for the Air Photographic and Charting Service by Filmaster, Inc.

Give Dates Well in Advance

It's a good idea to note the Chapter meeting dates well in advance and to give an optional date or an optional title on your request. Make 'em early to allow time for "on time" delivery and don't forget to return just as promptly so we can meet other Chapter requests!

The Man Behind the Lens

☆ Gene Marcus Huggens, whose "letter to a film-maker" appears as our Guest Editorial of the month, is Motion Picture Coordinator for General Dynamics at Pomona, California.

A graduate of the University of Southern California, 1951, with a B.A. in Cinema, Gene is the Chairman of the Southern California Chapter. He has worked in the motion picture industry in many capacities, as a worker and as a supervisor. His experience has ranged through all types of production, theatrical, industry, educational, military and in-plant.

The feature in these pages has been adapted, out of context, from a recent letter to members of his Chapter and we believe it expresses most deeply, not only the spirit of IFPA, but the faith and deep convictions of this man in his Association and in the future of the communications' media we all serve.

A Letter to an Industry Film Maker

by Gene Marcus Huggens

MOTION PICTURES are made by men with tools. Since the tools are available to anyone, it follows that the quality of films depends on the men who make them.

Film-making, then, is *not* a mechanical process — it is the measure of the perception of a man with a camera, a typewriter, a pair of scissors. You can shout things with a camera, whisper things, insinuate things, or just go around with a camera, planting seeds of ideas in people's imagination.

Improving Our "Inner Vision"

Motion pictures are a product of brain, heart and body; to produce them we have to develop intelligence, sensibility, and the senses — to improve our "inner vision."

Unfortunately, we are often condemned to partial activities in the administrative and technical areas of our profession; activities which fail to encompass the most precious values of our existence. We tend to practice film-making as if it existed in a vacuum, neither knowing nor caring what has gone into it to make it what it is.

Ask Yourself These Questions

Are we, as IFPA members, too pre-occupied with the photographic side of film-making to the neglect of its other facets?

Do our interests go no further than discussing gadgets and comparing one another's films?

Should we be dealing more with ideas rather than facts or figures? With the creative aspects more than the technical?

Should a closer communion exist among our members? Do we *really* share common experience, problems and solutions?

Are we discovering new and different ways of *seeing* and *saying*?

Do we appreciate our employers' problems and position?

Are we properly respected and recognized by our employer? Do we deserve to be?

Do we have a professional interest in the improvement of the industrial motion picture and its applications in business and industry?

Compare Present, Past Work

Look around your shop . . . at the examples of the work you're turning out today. Then think back a few years. Do you see startling proof of *growth* in your service, technology and craftsmanship?

Growth can be slow and hard when you are groping alone. It quickens when you meet with other interested people and film-makers who have worked and thought intensively about their medium. You listen and ask: not just *how*, but *why* — or you should. You see a film that blazes with significance and meaning. Suddenly, a way of working, dim till then, comes clear before you.

IFPA can begin to fill a large gap in our knowledge. It can relate the short items that rarely get into the more general books or current magazines because the material is unrelated. There has been an enormous amount of research, both in the technical areas and in the aesthetic employment of the tool which, if a contemporary had some idea of, would save him considerable time for pursuit of the expressive aspects of the medium.

Keep a Wide Open Mind . . .

It is imperative that we enlarge our vocabulary of visual images with an open mind, without fixed or pre-conceived ideas of what pictures ought to look like. We must look to those who are most sensitive and most perceptive for what is happening in every part of our environment.

By hearing their voices, not in unrelated isolation, but in unison and with awareness of the dependence on one another, we can act to conserve all that we have attained — and achieve new and better controls and understanding of ourselves and our environment.

Learning from the Masters

Only by studying the works of the masters of the medium, adapting old ideas to our particular needs, combining them with our original material, can we hope gradually to improve our product. We cannot escape environment, but we can and do fashion it; often in ignorance or short-sighted greed. But sometimes, too, with magnificent vision.

IFPA is an "environment" where we can talk straight to each other, discuss the problems that face us in our profession and art, share our experiences, comment on what goes on, discover the new potentials, form new friendsl raise and broaden our vision attitudes, and sharpen the f of our group and individual aim

"Using 8 Kodak Pageant Sound Projectors, we're showing the Civil War in-the-round"

s Mr. James J. Geary, Executive Director, n Virginia Civil War Commission.

e Virginia Civil War Centennial Center, in imond, is a round building *designed around a die.*

The entire balcony of the building is devoted he showing of an eight-part $70,000 movie d *Manassas to Appomattox.* The film is divided four-minute sections, each complete within it- but related to the other parts. The movies are wn on rear-projection screens from a central ection booth just under the dome of the build-

As one motion picture segment ends, the audi- moves on to the next screen, just as the next begins. The result is a continuous flow of ors, progressing smoothly around the balcony. wnstairs, they see a $100,000 exhibit which includes lifelike mannequins, animated maps, dioramas, and a display of Civil War relics on loan from museums.

"One of the big problems involved in making our Centennial Center work was, of course, the projection setup. This movie is to have a *four-year* run with continuous showings every day of the week, so the equipment had to be the most dependable available. The latest model KODAK PAGEANT Sound Projectors, with transistorized sound systems, were installed, and are doing the job wonderfully.

"We plan regular preventive maintenance for the projectors, but expect little trouble, because of the small number of moving parts in these new Kodak models."

While your company or school probably does not run its projectors as long or as hard as the Virginia Civil War Centennial Center, the new KODAK PAGEANT Sound Projector AV-126-TR offers advantages to you, too.

The all-transistorized amplifier is maintenance-free, ready to go the instant you turn it on. There is no distracting background noise. While easily capable for auditorium use, the entire range of sounds is crisply reproduced at small-room levels, too. The projector is so simple to operate the inexperienced can do it with little practice.

Your Kodak Audio-Visual Dealer will demonstrate this new Kodak projector for you, or you can write us for Bulletin V3-65, which gives more details.

KODAK PAGEANT Projector 〉 **EASTMAN KODAK COMPANY,** Dept. 8-V, Rochester 4, N. Y.

MPO Videotronics Building New Manhattan Production Center to House All Operations

CONSTRUCTION is now under way on the new film production center of MPO Videotronics, Inc., at 222 East 44th Street, New York. MPO is scheduled to move into the new center early in 1963.

At an announcement luncheon in New York last month, Judd L. Pollock, president of MPO, said his firm was confident in embarking on this venture even in uncertain times. He said he believed that the advertising industry was more "depression-proof" than almost any other kind of business, and television advertising—to which industry MPO is the largest supplier in the country — can offer more mass audience and more selling impact than any other form of advertising.

Entire Operation Under Roof

MPO's new studio complex will be a completely autonomous production center. The building will house what is said to be the most complete facilities for motion picture production ever assembled in a single structure. It will be possible for an entire film to be planned, shot, processed, edited and screened without moving out of the MPO building. Everything needed for total production will be available: studios, property and scenery construction and storage, optical and special effects departments, editing department, processing labs, sound recording equipment and screening rooms.

The location of the new facilities is in the Grand Central area where most of the city's major advertising agencies are found. It will thus provide advertising and industrial film clients with a great convenience in producing their films.

The Latest in Studio Design

Every aspect of the new center will incorporate advanced thinking in the design of motion picture studios. The building will contain nine sound stages occupying nearly half of the total 120,000 square feet in the complex.

The largest stage measures approximately 100 feet by 100 feet. It will have a clear height of nearly 30 feet. This sound stage will also have two permanent cycloramas, the largest measuring 150 feet by 30 feet, as well as a permanent grid ceiling platform from which lights and scenery will be suspended. The platform can also be used for direct overhead photography.

From Casting to Work Shops

The facilities will include a large casting office with its own waiting room capable of holding 30 people, a hairdressing salon, seven make-up rooms, 8,000 square feet of scenery storage space, and a large carpentry shop.

Air-conditioning and electrical systems have been exclusively designed to the requirements of film production. All corridors have been built wide enough to accommodate automobiles and heavy equipment. The building will have three oversized freight elevators, two new high-speed passenger elevators and ramps for off-street receiving and shipping.

Cites Importance of Teamwork

Marvin Rothenberg, MPO vice president in charge of creative services, described the opportunities the new center will afford as follows:

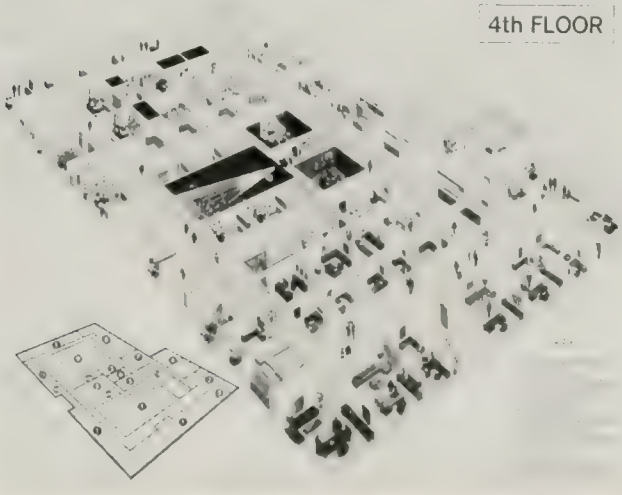
"Film production is a uniquely complex craft which requires the cooperative talents of a host of creative and technical specialists. For maximum results this team should continuously work together from the first pre-production discussions right on through to the final answer print. Such a group is always hoped for but seldom realized. This is one reason why I, as a motion picture director, particularly appreciate the possibilities of MPO's new production center.

Specialists Are Right at Hand

"At only a few studios that I know of," Mr. Rothenberg noted, "can one find all the necessary film specialists working so closely together that they can be assembled on a moment's notice to solve routine or emergency problems. Key departments such as direction, camera, special effects, scenic design, laboratory, editing and optical effects will actually be within steps of each other.

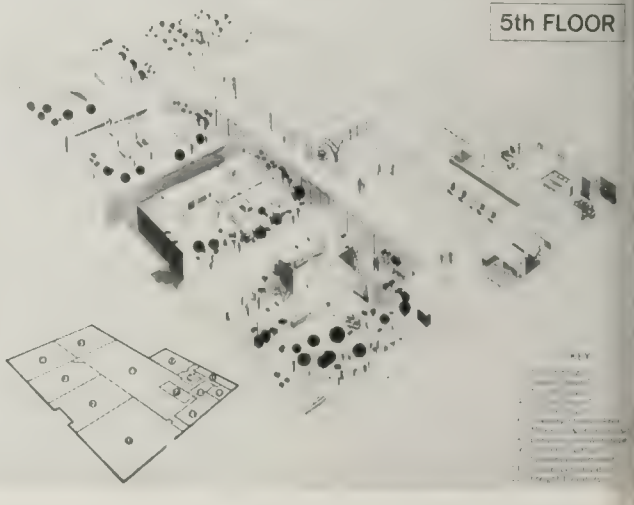
"Should the director need the opinion of an optical expert," Mr. Rothenberg said, "a member of our optical staff, one of the best in the country, can be on the stage in minutes. Editors can drop in on the set, watch the shooting and give suggestions which can make a real contribution to the production. Set designers can discuss dramatic action with the director and they can then plan their layout together.

Directors and cameramen can easily screen all of their rushes, work closely with the editor completing the film.



"For some time now MPO has been using what we call our Project Unit system. This produ unit is composed of all speci who work together in a single With a physical plant that b these men into closer workin lationships our Project should operate more smo and efficiently."

A Center to Stimulate Ide



Mr. Rothenberg concluded. MPO we have always believed the culmination of the cre process takes place in pre-pr tion discussions and planning. approaches and exciting so'u to film problems can come the free exchange of ideas a film craftsmen who have c dence in each other's abilities. stimulation provided by the i change of ideas among crew partment heads and clients life and spark to a film or mercial. When these men, their skill, knowledge and ex ence are brought together in fine working arena we have ned, with every technical req ment at their fingertips, a d tor will be able to generate effective and creative approa to filmmaking."

Arnold Kaiser, MPO vice-p ident in charge of produc pointed out the firm's belief the new MPO New York film duction center should bring stantially increased efficienc the company's filmmaking op tions. "Economies resulting new procedures in the produc

Tool Steel Producers' Film Explains the Special Alloys

Made to Make It, 80 frame, 35mm color, sound slidefilm, sponsored by Committee on Tool Producers, American Iron & Steel Institute.

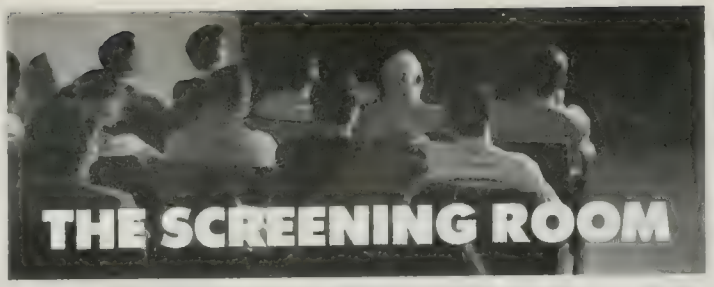
☆ This is the first in a series to be issued by the Committee on the manufacture and use of tool steels.

Outlining the continuous need of American industry for special

. . . Tool steels help make autos

alloys to shape and machine all kinds of materials in mass production, the slidefilm traces American tool steel manufacture from its earliest beginnings to its present level of high efficiency. Through a combination of clever wood block carvings and fiery color photographs taken on location, the slidefilm describes the major improvements in techniques and machinery needed to make today's many different tool steel types.

Distributed by: Ernest Bolduc, secretary, Committee of Tool Steel Producers, American Iron and Steel Institute, 633 Third Ave., New York 17, N. Y. on free-loan basis.



Echo of "Silent Spring"

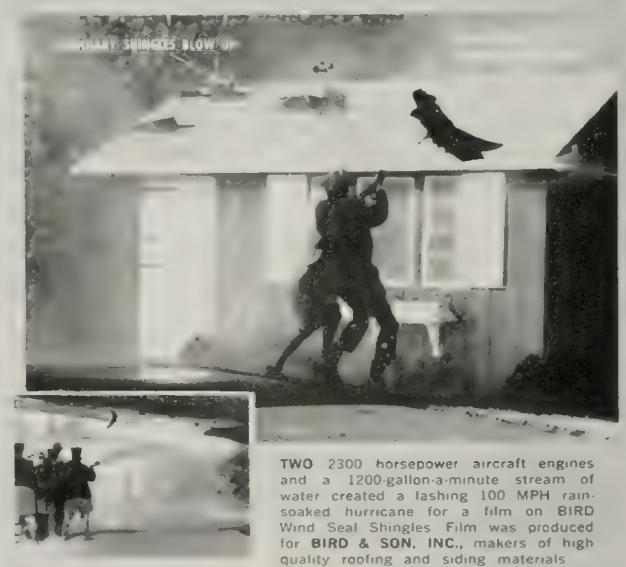
Poisons, Pests and People, 60 minutes, color, released by the National Film Board of Canada.

☆ Coincident to the publication of Rachel Carson's new book, *Silent Spring*, and nationwide concern with the problem of insecticides, this film is released in the U. S. by the National Film Board of Canada.

The film examines the effects of widespread use of chemical insecticides both on the insect population at large and on warm-blooded creatures, including man.

The film is said to be suitable for many audiences, including high school and college science classes and consumer and health organizations. Further information is available from: National Film Board of Canada, 680 Fifth Ave., New York 19, N. Y.

The Big Classroom, 30 min, color, sound. Sponsored by the National Education Association.



This film points up the pleasures of travel enjoyed by every tourist, together with the special remunerations which come to the teacher when the fun of travel is combined with the broadening of teacher knowledge.

American teachers are shown enjoying themselves in Norway, Sweden and Denmark, and even living for a while in Sandinavian homes. Along with the magnificent scenery, handsome cities and the wealth of historic interest in these countries, the teachers gain firsthand knowledge of the many aspects of the social and economic life of these vigorous and colorful people.

Ronnie Tritton, Chairman of the British Industrial Film Assn.

A Biographical "Profile" of Our Guest Contributor

☆ The guest author of the second of this series of articles written exclusively for BUSINESS SCREEN readers by Europe's top a-v men is Ronald E. Tritton, British Petroleum Company's General Manager, Information and Public Relations, and the Chairman of the British Industrial Film Association.

Ronnie Tritton served in the British Army Directorate of Public Relations in World War II, in charge of visual publicity and in this capacity he started the Army Film Unit. After the war he became Director of Films Division in the Central Office of Information (The British equivalent of U.S.I.A.) He joined British Petroleum in 1948.

Now, as General Manager, Information and Public Relations, Mr. Tritton controls one of Britain's most extensive and imaginative sponsored audio-visual program which has included the Hollywood Oscar award winner "*Guiseppina*" and "*Mikhali*," the 1962 Chris statuette winner in the Business and Industry category. It is significant that both of these films are part of his company's export sales program. ☆

A BUSINESS SCREEN INTERNATIONAL GUEST EDITORIAL

Britain's Industrial Film Association Strives for More Effective A-V Tools

by Ronnie Tritton

A NEW ORGANIZATION, called the British Industrial Film Association, has recently been formed in the United Kingdom. Its membership comprises about one hundred of the leading industrial and commercial firms in the country, most of whom already use films for public relations purposes, for training, research, and in other ways.

The Association has three principal aims: to try to raise the standard of British industrial films; to do everything possible to broaden overseas distribution of British industrial films; and to deal with all arrangements for the British participation in international and national film festivals.

In the latter connection, the U.K. has accepted an invitation from the Council of European Industrial Federations to hold an international festival of industrial films in Great Britain in the autumn of 1964 and it will be B.I.F.A.'s responsibility to organize and run this festival.

Members Are Sponsors, *Users*

B.I.F.A. is the first body in England solely representing the sponsors and users of films in the industrial field. It does not include representatives of the making companies. It has President Sir Ivone Kirkp who was until recently Cha of the British Independent vision Authority.

Sir Ivone has been for years a leading figure in the of Information, and his wor the ITA has given him knowledge of, and enthusias the power of the visual imag

Top Public Relations' Me

Mr. Michael Shersby is tary of the new body and it Council consisting mainly top public relations men of ing industrial and comm companies in Great Britain, i ing Imperial Chemical Indu Mullan, Shell International leum, British Oxygen and Petroleum.

One of B.I.F.A.'s early p to arrange a series of film at which sponsors can intr films which have won pri recent festivals and explai the films are made, and the gree of success in attaining objectives. It is hoped tha will broaden people's ideas, what can be done and is done by others, and help panies to lift their sights.

Plan Bulletins on Film U

Another plan is to pub regular bulletin giving, other things, detailed case hi of the use made of specific and, in particular, of their seas distribution. Again, th ject is to show what is being by experienced users of film so encourage those who ha yet ventured so far.

B.I.F.A.'s general aim bring about a wider and mo fective use of film in ind and commercial life — s from the deeply held belief Council that the ability to visual images and place the fore millions of people giv user of this power great tages. Perhaps the most i tant of these is the film's to *move* people.

Films Reach Heart and M

Of all the media of comm tion, the film — that subtle bination of picture, word music — has perhaps the gr power to move the minds of It can appeal to their hea well as to their minds and you touch the heart, the nothing you cannot do. Th is a marvellously versatile th a creative art, a tool of indu means of communication, a

nderstanding, and it is the and aim of the British In- ial Film Association that a r recognition of this can be ght about and a fuller use e of this child of the flickering cope.

Like some people we know, cameras don't move by themselves; they have to be pushed around.

A basic requirement in good camera movement is smoothness —a smooth beginning—middle and end when panning, tilting or both.

Years ago, when we had to depend on friction heads for movement, most cameramen acquired great skill in using these. Also, many cameramen depended on geared heads cranked with both hands which required tremendous dexterity.

Today, with our advancing technology; adapting principles of hydraulics and of gyroscopes we have evolved the fluid and gyro tripod heads. Great skill and dexterity is no longer an absolute requirement for fine, professionally smooth camera movement. Smoothness is now a built-in characteristic of each of the tripod heads shown here. We at F & B sell and recommend these most enthusiastically.

If you are still doing great work with outmoded friction or geared heads, we congratulate you. Still we urge you to modernize. Why not treat yourself to one of these fine fluid or gyro head outfits, and see if you don't agree that it makes your work easier.

With the help of many skilled cameramen, we have made up a chart so that you could select the outfit most suited to your needs. If you want more detailed information on any of these, or if you would like to "try out" or arrange for a demonstration with no obligation, please write us.

HOW TO SELECT YOUR TRIPOD

	PRICE	WEIGHT

RETAIL SELLING WITH 8MM SOUND

A Women's Foundation garment manufacturer, William Gluckin & Co., Inc., is using the Fairchild 8mm rear-screen sound projector as an attention-getting device to supplement its overall in-store merchandising program. The company has won the grand award made annually by Variety Store Merchandising for the best use of in-store sales promotion materials in variety chain stores.

Gluckin, which competed against top retail displays submitted by several hundred national retail manufacturers from all segments of industry, has won the grand award for the past three years.

Explains Effect of Display

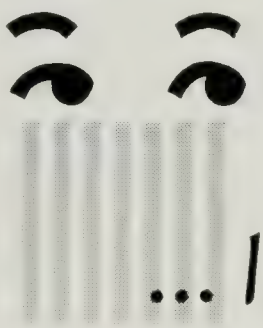
Here's how Henry N. Rouder, the firm's advertising and sales promotion director, explains the in-store sales promotion display:

"Our bras and girdles are displayed on self-selection counters in these high traffic stores and since so many women purchase our products on impulse, we felt a continuous color sound movie could both attract attention and deliver a stimulating sales message at the same time."

Rouder added: "In our 58 years of serving chain variety stores, this unit has proven itself to be the most effective merchandising aid we have ever offered. Store managers have reported that these units are powerful money-makers, with sales volumes running as high as $1,000 per week for a single end counter display."

Several Films Being Planned

According to Rouder, the company has already completed two three-minute films and has several more in the planning stage. The first two films were produced by QED Productions of New York City.



The rear screen projection device used by the firm is manufactured by the Industrial Products Division of Fairchild Camera and Instrument Corp. and permits the customer to view color sound movies of up to 20 minutes duration. It is designed so that its operation is completely automatic once the unit has been turned on, and will repeat the movie continuously during the selling day without attention from store personnel.

The Fairchild projector takes up less than two square feet of "above counter space" (see cut) and requires only that it be turned on at the beginning of the day and off when the store closes.

Award-winning Gluckin display with Fairchild projector at center.

Chains using the Fairchild 8mm sound projector as a sales aid include, among others, S. S. Kresge, McCrory-McClellan-Green, Neisner Brothers, J. J. Newberrys and the F. W. Woolworth Co.

rofilm Teaching Machines ed Learning for Trainees

Trainees at the Eastman Kodak mpany find concentration easier learning more rapid when pro- mmed material is presented on io-visual teaching machines.

hat report came from William E. Hawley, Kodak training executive, in Rochester, N. Y., at the November meeting of the instructional media committee of the American Association of Colleges for Teacher Education.

A-V Offers Added Dimension

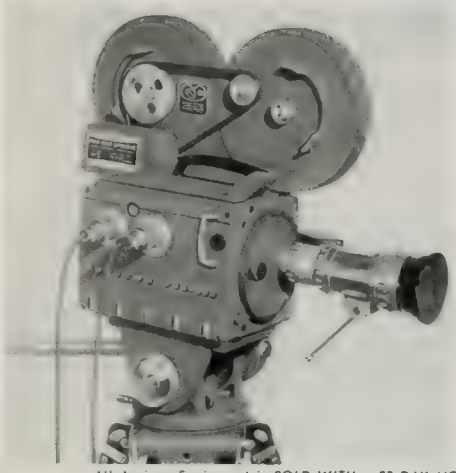
Hawley reviewed the company's experience with programmed learning, linear textbooks, and experimental teaching machines developed by Recordak Corp. He spoke of added dimensions for programmed instruction through the application of audio-visual techniques.

"The use of linear textbooks in sequential learning limits the teacher to verbal material, the student to verbal behavior," Hawley said. "Often it's the case of the textbook wagging the programmer.

Microfilm Can Be Adapted

"At Kodak, programmers, instructors, and students alike have shown a marked preference for microfilm teaching machines," he continued. The machines can be adapted to all methods of programming. Students find them both effective and easy-to-use.

"In addition, microfilm eliminates many of the problems of format, size, and storage and permits the use of full-color displays, charts, and photographs," Hawley said. "Materials are inexpensive and long-lasting.



Path to Individual Tutoring

"Informed educators are enthusiastic about the potential of the machine," he stated. "They believe that the continuing development of more simple and less expensive equipment will provide teachers with an opportunity to tutor individually each of their students.

"Educators are also excited about speculation that teaching machines and programmed learning may one day bring us to a better understanding of the learning process," he concluded.

News Along the Film Production Lines

Expansion of Sound Facilities Announced by Keitz & Herndon

A major expansion of sound recording facilities has been announced by Keitz & Herndon, Inc., 12-year-old Dallas motion picture production firm.

New Ampex tape recording equipment and Magnasync 16mm magnetic film recorders have been installed for the production of business films and TV commercials.

The Capitol library for musical background scoring, new equipment for location recording and a library of original sound effects have also been added, says Jack Bird, production coordinator.

Experimental sound recording with new acoustical treatments is another phase of the current expansion program. The new equipment enables Keitz & Herndon to provide five-channel mixing, sync sound and background scoring, dubbing, and narration and interlock for the production and reproduction of motion picture and sound tracks.

The firm's studio-office building is located at 3601 Oak Grove, Dallas.

New Aids to More Effective 8mm Sound

MPO Develops Automatic Cycler, Timer for the Videotronic 8

TWO NEW ACCESSORIES have been provided for the MPO Videotronic 8 sound projector. An Automatic Cycler permits the projector to be operated by means of a push button, for use in exhibits and stores, which turns itself off after each run of the film.

Another accessory operates the projector on a timing switch so that it goes on and off at predetermined intervals. These accessories have been designed to meet some of the demands which are placed on the projector for heavy-duty store and exhibit use.

Engineered for Two Markets

The MPO Videotronic 8 Repeater Projector was originally engineered with two markets in mind — desk-top sales, and for store and exhibit use. Hundreds of these projectors are now in daily use in both of these markets. The machines, like others of their type, were designed to be able to run continuously under ideal conditions.

The Videotronic 8 has, in fact, been run continuously for over three weeks on one print with no breakdown or appreciable print damage. However, continuous running of perfectly dry prints in dust-free situations is a much different proposition from the typical store or convention atmosphere where dust is always high.

According to Don Woelfel, head of MPO's Repeater Division, no motion picture projector of any type has ever been made that can stand up to continuous run conditions in areas of high dust concentration.

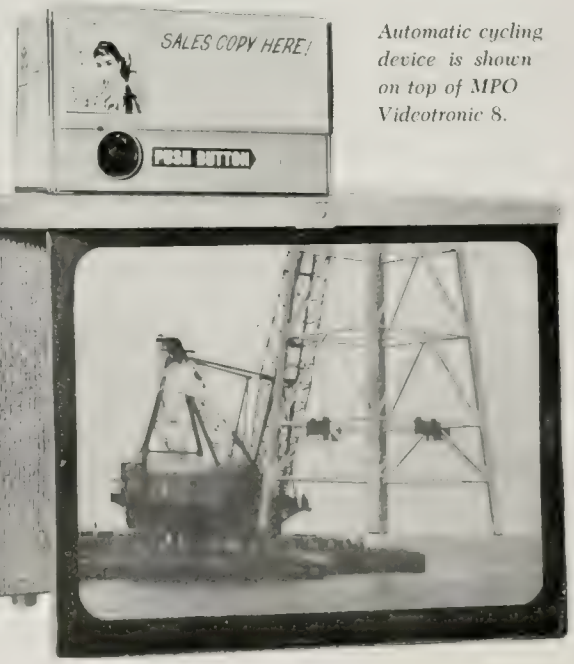
He points out that even 35mm theatre projectors built of extremely heavy construction, and operated in very clean air conditions, are serviced regularly and generally overhauled every few months.

Thus it is unrealistic to expect any repeater projector to run continuously under average conditions without resultant heavy wear on equipment and print.

Much better, and thoroughly reliable, is intermittent running, either with two to three minute intermissions while the machine is off, or continuous runs during heavy traffic and the projector to be off for longer periods while fewer people are around to watch the film.

Cuts Down on Projector Wear

The cycling device which MPO has introduced accomplishes this without losing any appreciable exposure. It gives the coverage of continuous run without wearing out film or projector. The Automatic Cycler box itself can be in almost any form — small and simple, or grandiose with flashing lights and bright colors.



As an example of how the Automatic Cycler works, MPO kept close tabs on traffic going by a repeater projector location in a large New York department st

From store opening at 9:3(10:45, traffic is light and the j jector was used very little; f 11:00 to 2:00 many custon were on hand and the cycler ton was pushed regularly so the machine operated continu ly. From 2:00 to 3:30, tr dropped about 50 per cent the projector ran intermitte while from 3:30 to 5:30, cu mers became fewer and the jector was used only occasion

Don Woelfel says that the genuity with which MPO Vi tronics with Automatic Cycler be used successfully is alr without limit.

For instance, let us imagir steam iron placed on an holder, and contrived so the

A-V CONFERENCE IN LONDON:

(CONTINUED FROM PAGE TWENTY-EIGHT)

ger of the Organization of European Co-Operation and Development's Paris office led the discussion on "The Art of Sponsorship". Norman Vigars, Films and TV Manager of the Ford Motor Company and Arthur Graham, Films Officer of the Bowater Paper Group were chairmen at the discussions on Budgeting and Sponsor/Producer Relations.

Developments in 8mm sound film were also discussed in detail and sponsors examined the Vicaudio and Videotronic 8mm sound projectors, in relation to their spring sales programmes — particularly interested were the British Aircraft Corporation, Ford Motor Company, International Computors and Tabulators, Esso and United Dairies.

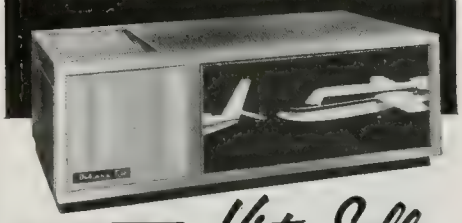
Henry Strauss Talks on "Integrating A-V"

Opening the second day's discussions was guest speaker Henry Strauss, president of Henry Strauss & Co. Inc., of New York, who outlined his concept of programmed motion pictures in the presentation "Integrating Audio-Visuals in the Company Communications Plan".

Strauss detailed the steps to be taken in planning management and employee attitude development. He screened a number of his films including *Something's Come Up* and the Berlin award-winning film *Strangers in Paradise* from Pan Am employee development programs.

The afternoon featured five representatives of leading industrial organizations who presented case histories of communications programmes which owed their success to motion pictures.

Accident Prevention in the Research Lab



Gordon Begg, Imperial Chemical Industries' Films Officer and the producer of Britain's award winning film *Black Monday*, described the film as the first motion picture designed to prevent accidents in research laboratories. Intended primarily for I. C. I's research scientists, it had been adopted by many schools and universities as part of students' training in laboratory practice.

Between workshop sessions, delegates inspected a selected display of new equipment including Sound Services' C. C. TV. system, the Bell and Howell model 641 16mm sound projector, Edric Films' Synchroflex location sound recorder for synchronised effects and lip synch, as well as the new Premier Edit-Or mechanised sound and picture bench.

At the close of the BUSINESS SCREEN INTERNATIONAL WORKSHOP, the speakers and delegates were the guests at a reception given by Roland Chase, President of Colour Film Services, one of Britain's leading 16mm colour laboratories.

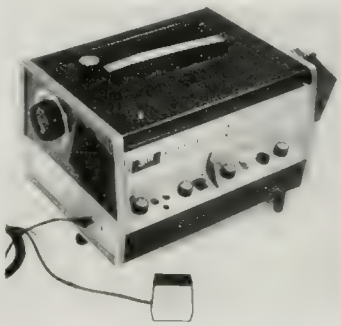
Revere adds sound to slide projector; a new Selectroslide



Revere Sound Slide Projector Records Its Own Talking Slides

☆ A one-piece sound slide projector with built-in audio recording and playback capability has been introduced by the Revere Camera Co., a subsidiary of the Minnesota Mining and Manufacturing Co.

The Revere "435" Sound Slide Projector is an all-in-one slide projector with a tape-recorder-playback unit. Development of a special magnetically-coated sound slide mount and a radically-different type recording system were keys to the new development.

Slide mounts are 3¼-inches square, contain a 1⅜-inch "window" to accommodate 35mm or 127 size Super Slides. One side of the special mount carries a thin strip of magnetic tape. Revere engineers devised a recording head system that moves in a spiral path around the face of the mount. (In a conventional recorder, magnetic tape passes through a stationary head.)

The Model 435 can be operated manually, semi-automatically

Revere's Model 435 Projector

and automatically, utilizing a 40-slide non-spill magazine. It comes equipped with a microphone for recording up to 20 seconds of comment with each slide. Obviously, programmed material with continuous music, etc. may not be used with this intermittent system.

Slides are narrated after processing, can be immediately played back and re-recorded if correction is necessary. The same sound slide mount can be recorded on many times, enabling a salesman or trainer to change approach for varying types of customers or trainees.

Technical details include: 3 x 5-inch, 8-ohm integral speaker; dual control panel with three-position selector knob for manual, semi-automatic or automatic operation; pushbutton for slide changes; three position toggle switch for on-off operation and for recording with lamp off; and a knob for advancing the slide tray manually.

The projector has a Wollensak

Magnetic-striped slide mounts

5-inch f 3.5 projection anistigmat lens; uses a 500-watt base-down lamp. Weight is 25 pounds. The unit measures 10 inches high by 10¼-inches wide; is 13 inches wide. Vinyl carrying case has pocket for power cord, microphone and other accessories. For additional descriptive literature and prices check NP #1 in the convenient Reader Inquiry box on this page.

Spindler & Sauppe Introduces a 1200-Watt Manual Selectroslide

☆ A new 1,200-watt Venturi blower-cooled manual slide projector, said to be the only one of its type on the market, has been announced by Spindler & Sauppe, Los Angeles.

The model, SLM-1200 Manual Selectroslide "fills and surpasses" the niche long left vacant by the company's discontinued "Master" model. It carries a $267 price with 5" lens and fitted case. Remote command cord is extra. The SLM-1200 is adaptable to use single frame filmstrips with either manual or remote control attachment. It also accepts quality accessories for the "SL" series of Selectroslide projectors including 15 lenses from 1½" to 11" and

SLM-1200 Manual Selectroslide

will accommodate the Leitz F high-speed lenses.

ant Introduces an Improved ucator" Model Tripod Screen

he newly-improved Educator d model projection screens of Radiant Manufacturing Corp. have been designed and constructed for heavy-duty use. This especially-constructed model has proven effective where screens are used day-in and day-out.

The Educator screen features anodized aluminum tripod legs that open at the touch of the toe. An all metal slat bar protects the screen surface when not in use. For use in large rooms the screen can be opened to a maximum height of 116 inches; for use on stage or platform it can be dropped to only 12 inches from the floor. Other features are: trigger locking handle for complete adjustability, drawn steel slat tips, screen leveler for uneven floors.

The Educator is available in sizes 50 by 50 inches through 70 by 70 inches, all in seamless surfaces. A choice of three projection surfaces: glass beaded VynaFlect, silver lenticular OptiGlow or new white lenticular Super Uniglow. For a complete Radiant Screen guide and other useful literature on these models, check NP #7 in the Request Form.

Strong Electric Introduces a New Xenon Arc Projection Lamp

☆ A new model Xenon arc projection lamp which is available in three capacities has been announced by the Strong Electric Corp.

Projecting a steady, flickerless, pure white light, the lamp is independent of voltage variations of the power line supply, and excellent for color film reproduction. Extremely even distribution of light is afforded throughout the total screen area, and "push button repeatability" of intensity and color temperature is possible.

Practically no heat is projected to the film or aperature plate. No

Strong Arc with Xenon Lamp

cooling is required. Focus remains constant.

The 900-watt model is designed for matte screens up to 23 feet wide, and high gain screens up to 28 feet wide with CinemaScope aperture.

The 1600-watt model is for matte screens up to 29 feet wide, and high gain screens up to 36 feet wide.

The 2500-watt model is for matte screens up to 35 feet wide, and high gain screens up to 43 feet. Check NP #8 for additional product data.

A-V SERVICE AT SEATTLE:

(CONTINUED FROM PRECEDING PAGE FIFTY)

a display with 36 buttons. When one of these was pushed, it showed two slides of an area, while a 20-second tape described the pictures.

A Spindler & Sauppe Model SLS 750, and four continuous four-track Viking tape decks provided the basic equipment. A special switching arrangement was built to select the proper slide and tape track through the use of relays.

Standard Oil of California used a *moving* motion picture projector. The exhibit featured a diorama of a modern "city of tomorrow" and over this city a 16mm projector projected details of what was to be expected in this city of Century 21.

The projector moved in a horizontal arc projecting just over the area being discussed by the narrator. The projector was mounted on an eccentric platform, and its movement was triggered by a photocell reacting to black leader spliced in the film.

Make Good Use of Continuous Projection

There were many fine uses of single, continuous 16mm projectors and continuous slide projectors on the grounds. Alaska Canned Salmon used another Spindler & Sauppe slide projector, and integrated it into the Alaska exhibit.

The Seattle Area Industrial Council, and the Central Association (of Seattle) put on a 16mm film, (using a Triangle), which also tripped lights on a map to show the exact area being discussed. This was done by notching the film, and having a microswitch read these notches.

Washington State's Department of Institutions had a similar setup, using a Beseler Salesmate (tape sound slidefilm projector) which also controlled lights on a map of Washington, showing their various locations.

These are a few of the many other applications of audio-visual techniques which again and again proved the value of audio-visual techniques to effectively deliver the exhibitor's message.

Looking Ahead to New York's Fair in '64

Rarig's Service Department has endured six months of rush — rush — rush! For when a piece of equipment broke down, it was a major disaster for the exhibitor, and had to be fixed as soon as possible.

This often meant 12 and 16 hour shifts for the repairmen as well as phoning suppliers at home in off-hours to obtain rarely-used parts. But this was an exciting and educational period, as everyone at Rarig's will agree!

One of the employees put it quite well: "It's been a fascinating experience working on the grounds these past six months. Even I never dreamed there could be so many ways to use audio-visual equipment. I'm looking forward to the New York Fair, and seeing what they do with A-V there. It should be great!"

MULLING OVER A NEW MOTION PICTURE?
With 48 years of budget-stretching film experience we'll gladly mull with you . . . and then . . . produce!

Two New Accessories for the Videotronic 8:

(CONTINUED FROM PAGE 68)

tomer is encouraged to pick it up. This triggers the projector, and the action on the screen tells the customer to look at the various features of the iron. Thus, live action photography, animation, and the wiles of a skillful salesman on the screen can be used to embellish the customer's actual inspection of the iron. This would be an extremely effective demonstration piece.

MPO's tests have shown that most people *will* push the button to start the projector, and this very act of violation in starting it will encourage them to watch the whole film and pay rather good attention to it. Other on-the-spot tests have shown that the best length for a store film sho from three to six minutes, up to 12 minutes can be us fectively in exhibits. The Videotronic 8 will accept from 2 to 15 minutes in l

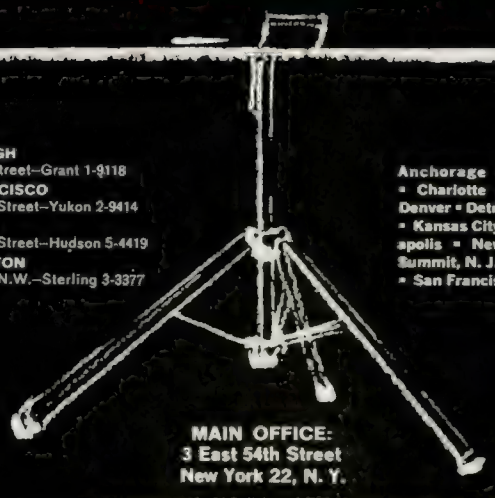
FIFTY CENTS



when your business film needs distribution...you can:

Organize your own distribution department. This would merely entail hiring film bookers, printing your own descriptive and sales material, putting in tabulating equipment to keep track of your prints and audiences, employing technicians and facilities for inspecting your film after each showing and keeping it in like-new condition, getting the film to the audience on time and taking care of a myriad of other details. OR . . . you can

have Modern do it!

It will be done just the way you'd do it yourself, if you had Modern's facilities and experience. We'll find your audiences, schedule bookings, have the film delivered promptly by the nearest of our thirty-two libraries and give you regular IBM-tabulated performance reports. A business film cannot do its job until it is seen by people. To have it seen by the most people at the lowest cost...consult with Modern.

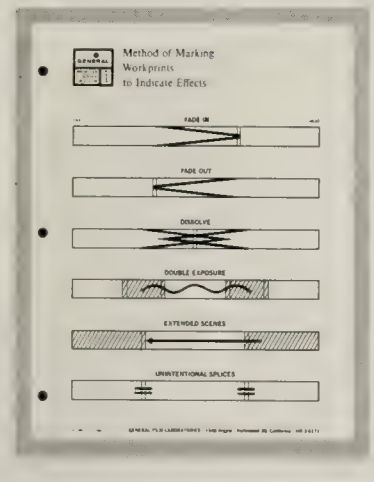
ARRIFLEX at work — ONE OF A SERIES*

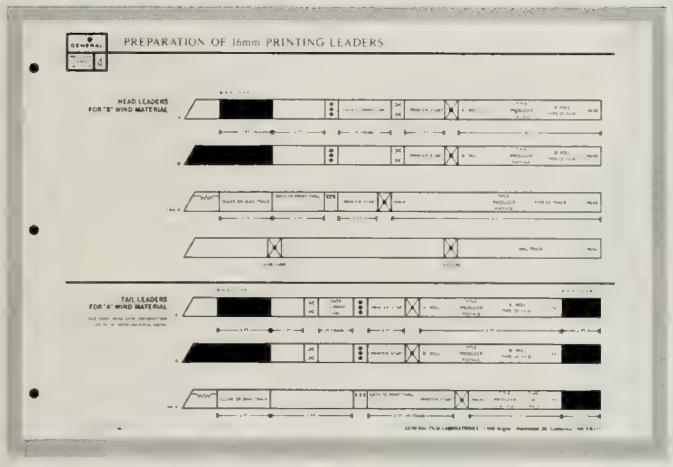
ARRIFLEX® "chases" the X-15 at North American Aviation

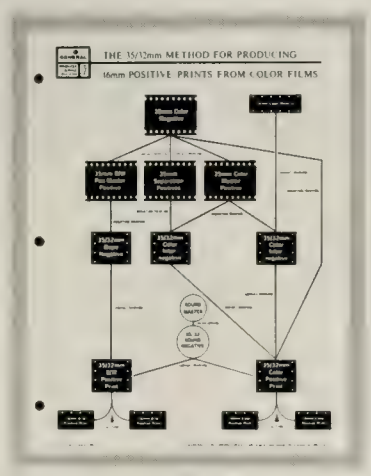
In the hands of North American's photographic team, Arriflex motion picture cameras share one of the most dramatic assignments of all time . . . film coverage of the X-15's history-making flights. Tracking the supersonic aircraft — from chase-plane or ground positions — is sure and precise with an Arriflex. Its reflex viewing system gives the cameraman a direct, brilliant, and continuous through-the-lens image of his subject. He can follow-focus critically . . . frame his target with positive accuracy. And on the projection screen, his footage is consistently sharp and rock-steady. Arriflex . . . a capable match for the fabulous dynamics of aerospace research!

From the microscope to the missile range . . . from spot locations to sound stages . . . Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile – uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex cameras their remarkable capabilities:



• MIRROR-SHUTTER REFLEX VIEWFINDER • REGISTRATION-PIN FILM MOVEMENT • 21°-DIVERGENCE 3-LENS TURRET • CONTOUR HAND GRIP • FRAMES-PER-SECOND TACHOMETER • COMPLETE ACCESSORY SYSTEM . . . lenses, standard and special-purpose electric drives, power supplies, time-lapse equipment, film magazines, sound blimps, tripods.





WRITE FOR NEW CATALOG.

Charts fit 8 1/2" x 11" binder

2-4

These charts should be in your files

Who knows when somebody might ask you a question like "What's the minimum overlap on a zero cut?" Or, "How many generations will we have in those prints?"

Sure, you'll know the answer, but why bother? Show him one of these Producer Service Bulletins we just put out. They don't cover every situation, but they try!

Four of the twelve are editing charts. They show how to mark workprints to indicate effects, how to prepare 16-mm and 35-mm film for A & B Roll printing, and how to prepare 16-mm printing leaders.

The other eight are printing flow charts. They illustrate the steps required in different types of printing, from the camera stock to the release prints. All are punched for a three-ring binder (the big ones fold to fit.)

We'll be glad to send you a set of these charts, as long as we have them in supply. Let us know. If you feel inclined to tell us, we'd like to know what you do in your job. It helps us plan advertising.

N A M Seeks Outstanding Films on Industrial Relations Theme

☆ Film producers and distributors are asked to submit their outstanding industrial relations movies and filmstrips produced in 1962 to the National Association of Manufacturers for selection of those to be shown at a special presentation by the Association in the spring of 1963.

The films selected will receive an "Award of Merit" and will be shown before a group of business executives attending the 35th NAM Institute on Industrial Relations, to be held March 24-29 in Phoenix, Arizona.

Films submitted for this competition should be appropriate for showing to employees of the average American company, rather than only those of one particular industry; they should be directed primarily toward an audience of employees rather than toward consumers or the community as a whole. The films, according to the NAM, should deal with the specific needs of the industrial relations area, such as the role of supervisors in improving a company's human relations factor.

A committee of representatives of NAM member companies will select the group of films for the spring showing. Entries must be received before February 15. Film producers or distributors may obtain detailed information from Janet Wilkins, Audio-Visual Department, National Association of Manufacturers, 2 East 48th Street, New York 17.

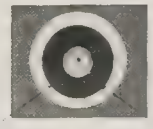
automatic 8 mm sound motion picture repeater projector... MPO Videotronic 8

Now, salesmen, training directors and exhibitors can show motion pictures as easily as turning on a TV set! Show them in daylight on a prospect's desk or to a large conference room group. Show them in a display or a trade show exhibit. Show up to 15 minutes of 8 mm sound film over-and-over with no operator, no rethreading or rewinding. Show your films on a big, self-contained screen. Show them with unmatched brilliance and clarity in picture — the brightest picture available — and clear undistorted sound.

EASY TO CARRY
Light as a portable typewriter, the Videotronic 8 weighs only 19¾ lbs. Smart, luggage-type case makes it easy to carry, and easy to take along

NEW FILM LONGEVITY
Short film path, unique, powerdriven film platter and specially designed rollers and gate. Tension, abrasion and scratching are virtually eliminated.

NEW PATENTED PRE-LOADED MAGAZINE
Film comes to you in a preloaded plastic magazine. Rewinds film automatically during projection. Stop and start anywhere in the film.



VIEWING
Self-contained, fold-out rear projector screen for daylight, desk-top viewing. Finger-tip mirror adjustment for conventional screen projection.

CYCLING UNIT AVAILABLE
For display and exhibit use, for use in "closing" and show rooms. Visitor activates machine. Film runs to end and cuts off, ready to be started again.

PATENTED GUIDE ARMS
gently shape the film coil so that a friction-free space is created in the center of the magazine. The film loop is fed to the projector without tension.

PREPARATION OF 8 MM FILMS: To start your program with the Videotronic 8, MPO, world's largest producer of sponsored films for industry, can make a new, inexpensive 8 mm sound film for you . . . or convert your existing 16 mm films to 8 mm. And 8 mm prints cost less!

LOWEST PRICED 8 MM REPEATER! With all of its quality features and advancements in continuous projector design, the Videotronic 8 is the lowest priced repeater on the market! It can be purchased or leased on an attractive low-budget monthly lease/purchase plan.

THE NEWSREEL:

(CONTINUED FROM PAGE SIX)

ented by the National Council on Jewish Audio-Visual Materials, it was announced by Dr. Samuel D. Freeman, chairman of the National Board of Review.

Dr. Freeman suggested that producers submit information about their films and filmstrips of Jewish interest, not later than January 11, 1963, to Dr. Zalmen Slesinger, Executive Secretary, National Council on Jewish Audio-Visual Materials, 101 Fifth Avenue, New York 3, New York.

Awards will be made at the 13th Annual Meeting and Workshop of the Council in May 1963.

* * *

International Advertising Film Festival on June 17-22

☆ The 10th International Advertising Film Festival of the Screen Advertising World Association will be held at Cannes, France, June 17 to 22, 1963.

The Festival is being extended one day, because it is felt this is necessary to relieve the pressure on the jury in the closing stages for final selection of prize-winning films.

The first meeting of the committee appointed by the Executive Council of SAWA to supervise the organization of the 1963 Festival was held in Paris recently.

The official program will follow the pattern of previous years. A dinner and dance will follow the prize awarding ceremony on Saturday evening, June 22.

In general, the regulations and maximum number of entries per competitor in the Cinema and Television groups will remain unchanged. The Cinema group will have 12 categories and TV 11.

The Jury for the 10th Festival will be increased from 15 to 16 members. This will permit equal representation between Cinema and TV groups. Details of nomi tions to the Jury and countries be represented will be announ later.

The Festival office, meanti will handle any inquiries conce ing the 1963 Festival. Write: Director, 10th International vertising Film Festival, 38 De St., London, England.

* * *

February 15th is Deadline f American TV Festival Entrie

☆ A February 15th entry deadl for the 1963 American TV C mercials Festival has been nounced by Wallace A. Ross, F tival Director. The competitio open to advertisers, their agenc production companies and tel sion stations. All commercials t cast in the U.S. and Canada tween March 1, 1962, and Ma 1, 1963, are eligible.

Five regional councils of pr inent advertising executives again judge the entries accord to their product classificati Golden statues (to be nick-nam this year) will be presented to B of Category and Special Citat winners at an awards luncheon the grand ballroom of the Waldo Astoria Hotel, New York City, Friday, May 24th. Workshops screenings will be scheduled the same day. Showings and aw presentations in other cities follow in May and June.

Entry information is availa from the festival office at 40 E 49th Street, New York 17, N. ELdorado 5-5877.

THE EDITORIAL VIEWPOINT

Selling As a Career? "Phooey," Say College Students As Only Five Percent Choose Sales!

☆ With many countries, including our own, so vitally dependent on the hands and heart of career salesmen, it is shocking to note the comparatively low opinion held for this profession by the average college student.

Only one male college student in 17 is willing to try selling as a career. Three-fourths of male students consider selling at best only a job; at worst, a racket. Of the 69 per cent of today's college males who already have decided on their careers, only five percent have chosen sales.

We are indebted to financial columnist Sylvia Porter for her nationwide piece alerting the business community to this state of affairs and to Sales Management Magazine for bringing the study to light.

Elsewhere in this issue is a piece about *one* new motion picture that does something about selling as a career. To our mind, the field could take a dozen more titles, aimed at the enormous teen-age population where such decisions begin to be made and aimed again, in more sophisticated versions, at the college audience.

BELL & HOWELL PRODUCTS ARE AVAILABLE IN CANADA THROUGH CANADIAN DEALERS / SPECIALIST AUTOLOAD FILMOSOUND ARE TRADEMARKS OF BELL & HOWELL COMPANY

Before

Finger-fumbling could 'lose' your audience before the show ever began!

After

No 'amateur night' presentations with this automatic 16mm sound projector!

Bell & Howell's new Specialist Autoload Filmosound projector threads itself (no other 16mm sound projector does)! See how this ease and dependability can make your films work more effectively for you!

Threading a 16mm sound projector used to be a finger-fumbling job. Distracting, time-wasting threading delays sometimes destroyed the effectiveness of film presentations.

Now the new Bell & Howell Specialist Autoload changes all that! This one threads itself—sprockets, film gate, sound head and all—automatically! And because threading is precise, film-flutter and off-key sound are also prevented automatically.

In addition, you get all the other advantages of the Specialist . . . light weight . . . brilliant picture . . . reverse . . . single frame viewing . . . rugged Bell & Howell construction.

IATSE Awards to Jamison Handy Point Up Studio's Fine Labor-Management Relations

☆ An outstanding example of harmonious labor-management relations, covering a period of many decades, was emphasized on November 26th when all six Detroit, Michigan locals of the International Alliance of Theatrical Stage Employees and Motion Picture Operators honored Jamison Handy, president of The Jam Handy Organization. Mr. Handy became the first man to receive honorary gold membership cards from the six key labor groups.

Cited "for outstanding personal relations with the unions" and "in recognition of his 50 years of inspiring leadership and true democratic spirit" at the ceremony, Mr. Handy was also presented with a gold plaque by International headquarters, represented by Walter Diehl, assistant to president Richard F. Walsh.

Honored by a gold plaque from IATSE unions was Jamison Handy, president of The Jam Handy Organization (right) *who is pictured receiving the award from Walter Diehl.*

The plaque cited the communications' pioneer for "his untiring devotion in the creative field of visual communication." From the corner, it's a refreshing thing to note this bright island of *good* management-labor relations within our industry. Beyond any question, the membership within these craft unions includes some of the most able technicians and craftsmen in the industry, well worthy of their hire.

All too often, those who circumvent the employment of craft members along the film production lines, cite "savings" in cost as an advantage. The price paid for lack of quality, for the absence of experience and skills, is hardly ever worth the slight difference.

The Nation's Public Libraries Need a Good Sponsored Film to Help Tell Their Story

☆ When American Library Week comes up next April 21 to 27th, will the many thousands of U. S. public libraries have a good public relations picture "going" for them?

Our nation's libraries, particularly in smaller cities and towns, need public support to meet their growing payrolls, increased competi for competent professional library school g uates. Industrial and university researcl braries are taking good people with their scales and added benefits.

How about it, American Library Associat why not prevail on some of your many p lisher friends and suppliers to underwrite long-needed film on what a good library m to the community?

KALART / VICTOR

SERIES SEVENTY 16mm SOUND PROJECTORS

The Dependable One

There's something very comforting about the way a Kalart/Victor projector runs. Whisper quiet. Almost without effort. And above all, dependably. It's *always* ready to put on your program.

One reason is the lubrication system designed exclusively for Kalart/Victor projectors. Oil is metered from a large reservoir on "demand feeding" by means of a wick. Parts are given only the amount of oil they actually require. There can be no leakage because the oil travels *upward* through the wick by capillary action. One filling of this oil reservoir keeps the projector running smoothly for some 1,200 hours, or a full year of heavy use. What efficiency!

Of course, there are a score of other features that contribute to Kalart/Victor's reputation as the *dependable* 16mm sound projector. Your authorized Victor Audio-Visual Dealer will be more than pleased to point them out to you.

Free — "How Industry Profits from Films." Booklet is packed with information on use of audio-visuals in every phase of business, from training to sales. Send now for your copy. Address your request to Victor Animatograph Corp., Dept. 5V.

VICTOR ANIMATOGRAPH CORP., DIVISION OF KALART, PLAINVILLE, CONNECTICUT

Hold 10th National "Day of Visuals" in Ju

Event Sponsored by National Visual Presentation Associat

THE NATIONAL Visual Presentation Association will hold its Tenth National Day of Visuals on June 4, 5 and 6, 1963 at the Commodore Hotel in New York, it was announced this month by William J. Connelly, National President of the association.

"This year's program will mark a decade of progress by NVPA and will be the first time the National Day of Visuals Program will run three full days," Mr. Connelly said. In recent years it has been of two days' duration.

Program Has Three Phases

A National Awards Competition, a Visual Communications Symposium, and the Visual Communications Exposition are the three interrelated segments that form the Day of Visuals.

One of the major national events in the field of audio-visuals and presentations, the Day of Visuals draws attention from all parts of the country and Canada.

From its inception, ten years ago, it has maintained one primary objective — to improve visual presentations. For this reason, it effectively serves the diversified interests of business, industrial, government, educational and religious organizations with this common interest forum on visual presentations.

Beach Named General Chairman

Frederick G. Beach, authority and consultant on audio-visuals, will be General Chairman. Janet R. Wilkins, National Association of Manufacturers, is Chairman of the Annual National Visual Presentation Awards Competition that will be held in conjunction with the Symposium. Norman L. Bebell, of Bebell and Bebell Color Laboratories, Inc., serves as Chairman of the Exposition Committee.

The success of the Ninth Day of Visuals, held last June in New York, has prompted the Association to enlarge its Visual Communications Exposition. The entire area of the Commodore's Windsor Ballroom will be devoted to exhibit booths of leading audio-visual and communications equipment manufacturers, services, and suppliers from all parts of the United States. This comprehensive exposition will bring to New York the latest new developments in presentation equipment and techniques.

Three full days of seminars on audio-visual and presentation subjects will be held. A departure this year from previous sympo programs is the running of current seminars. The format be carefully prepared to pr interesting and informative grams for both the knowledge presentations specialist and the experienced person.

Mr. Connelly said, "The entation field encompasses a range of tools and techni NVPA plans to offer selective inar sessions that will be div between those who are 'sop cated' and those who are new ers to this rapidly maturing of communications. The then the Tenth Day of Visuals Sy sium is: 'Impact Communica That Motivate'."

Four Types of Presentatio

The Annual Day of V Awards Competition, also i tenth year, will encompass major areas of visual pres tions: (1) motion pictures, sound slidefilms, (3) stripf slides, overhead projector grams and opaque projector grams, and (4) easel graphic cluding flip charts, chart s flock and magnetic board grams.

Details of the Awards Co tition and entry blanks are a able from the NVPA Nati Headquarters, 19 West 44th St New York 36.

One of the highlights of three-day program will be Awards Banquet that will be on Wednesday, June 5. Wir of the Visual Presentation Co tition will receive their awar this time.

Area chapters of NVPA taking an active part in the ning of this year's Sympos and several authorities in v presentation from within the of NVPA will be on the sen programs.

Int'l Labor Film Festival to be Held in Israel May 5-10th

☆ The Fourth International Labor Film Festival will be held in Tel Aviv (Israel) from May 5-10, 1963.

This festival, organized by the International Labor Film Institute in collaboration with the General Federation of Jewish Labor in Israel, follows similar Festivals held in Hamburg (1954), Vienna (1957) and Stockholm (1960).

The objective of the Festival is to compare works of cinematographic art on labor (topics) produced in the free world and to show films featuring social and human questions of interest to labor organizations.

The Festival will be extended by a trip through Israel which will give participants some idea of the achievements in the field of workers' welfare and economic and social development in that country.

Invitations to participate in the Festival were sent to the principal international organizations concerned, including:

The International Labor Office (ILO), International Film and Television Council (IFTC), International Audio-Visual Technical Center (IAVTC), United Nations Food and Agriculture Organization (FAO), European Coal and Steel Community, (ECSC), Office for Economic Cooperation and Development (OECD), European Economic Community (EEC), and the United Nations Educational, Scientific and Cultural Organization (UNESCO).

Agriculture Hosts a Centennial Film Festival

Secretary Freeman Opens Eventful Three Days of Showings, Television Seminar as 102 Entries Compete in Twelve Categories for America's First Farm Film Awards

THE 100TH BIRTHDAY of the United States Department of Agriculture has been observed in 1962 on numerous occasions but the highlight for the factual film industry came on November 7th when Secretary Orville Freeman, strongly visual-minded, opened the nation's first film festival devoted entirely to agriculture.

In a mood as cheery as his Department's orange-colored Jefferson Auditorium, Secretary Freeman delivered a short, crisp talk which deplored the lack of information about agriculture in our country. "More pictures and fewer words" he suggested, "would bring more information about our nation's farm program."

In the audience at this tradition-making Centennial Film Festival of Agriculture, held in conjunction with the USDA's 9th Annual TV Seminar and Visual Workshop program, were visual specialists from universities, state departments of agriculture and information specialists from farm extension services throughout the country. Industry and film people were counted among the Festival and workshop audiences during the three-day program.

George Barnes Presents Awards

Festival awards were presented to American sponsors and producers by George Barnes, Acting Director of Information for USDA; Under Secretary of Agriculture Charles S. Murphy presented Special Participation honors for films screened at one of the Centennial Festival highlight programs on "Americas' Day." These were selected for citation by the Inter-American Institute of Agricultural Science at Turrialba, Costa Rica and by the National Film Board of Canada, giving representation to both hemispheres.

Awards to U. S. entries were in two major groups: the Awards for Excellence given eight top winners and Honorable Mention Awards presented to another eight outstanding motion pictures. Three additional films were selected as "runners-up" and cited for optional showing. A "Special Award" distinguished the U. S. Geological Survey film, *The 1959-60 Eruption of Kilauea*, made with the cooperation of the National Park Service, U. S. Department of Interior.

A total of 102 motion pictures were entered in the big show, reflecting, in particular, two important new facts about agricultural America:

1. That the technological revolution has changed the farmer's image; and

2. that rural and urban life are surprisingly similar in these fast-moving years.

In contrast to the words of forward-looking Secretary Freeman, back in 1912 when the Department established the first governmental motion picture operation, the Secretary of Agriculture of that period, James "Tama Jim" Wilson, called the motion picture a "work of the devil . . . a disreputable medium of expression."

Secretary of Agriculture *Orville L. Freeman opens the three-day Centennial Film Festival program.*

It took a motion picture of the Secretary, addressing a group of visiting "Corn Club" boys, to "sell" him on the medium. Secretary Freeman, as Governor of Minnesota, welcomed members of the Industrial Audio-Visual Association to one of its annual meetings a few years ago, with a heart-warming delineation of the vital importance of films in many specific phases of state education and information programs. He was, incidentally, the *first* political candidate in Minnesota history to use television.

Great Strides in Productivity

J. K. McClarren, Executive Secretary of USDA's Centennial Committee, summed up films' role in this commemorative year with these words:

"During this Centennial year, we have had occasion to reflect on the achievement made in agriculture. The great strides in productivity during the past half-century are particularly outstanding. This success is due in no small part to the use of new and better means of communication.

"Agricultural motion pictures have commanded a major position among the many devices used to communicate with farm people in this time of rapid development."

Keynote Address by Seldes

Keynote address at the Wednesday a.m. opening program was made by Gilbert Seldes, Director of the Annenberg School of Communications, University of Maryland. The noted critic and author spoke on "From County Agent to TV Camera." James Robertson, Vice-President for Network Affairs, National Educational Television and Radio Center followed Mr. Seldes with views on "The Future of Educational Television."

When the TV and Visual Workshop seminars resumed deliberations on November 8th (at the Sheraton Park Hotel's Exhibition Hall), an hour-long panel program on "Getting Public Service Materials Used on Television" made an especially useful contribution to attending guests.

TV Panelists and Moderator

Chairman Harold Lewis, Assistant Director of Information, USDA, and Moderator Carl Meyerdirk, of KVOO, Tulsa, Okla. and President of the National Association of Television and Radio Farm Directors, headed the discussion program.

Panelists included Harold Kirn, Director, Audio-Visual Division, Office of Civil Defense, DoD; Ralph J. Del Coro, Vice-President, Modern Talking Picture Service, Inc.; Alan Newcomb, Director of Public Affairs, Jefferson Standard Broadcasting Co., Charlotte, N. C.; and Kenneth Thomas, Director, University Information, Kansas State University.

Ben Rhodes *(right) accepts award for "Canadian Portrait" from George Barnes, Acting Chief of Information.*

Judges From Many Fields

A total of 36 judges selected entries for awards consideration. Their membership included visual specialists from education, farm organizations and industry. Final review judges were Charles Dana Bennett and Edith Bennett, representing the Farm Film Foundation; James H. Culver of the Library of Congress; and Edward Kendall, of the Smithsonian Institution. The Farm Film Foundation, incidentally, was a gracious host at the frequent and appropriate "Milk Breaks" which were interspersed throughout the Awards and Workshop programs.

David Brinkley, NBC news' commentator, addressed the final Workshop seminar on November 9th with knowledgeable ideas on "Programming the Network News Show." Sharing the spotlight at this final Jefferson Auditorium

TV Panelists *(l to r): Kenneth Thomas, Kansas State; Alan Newcomb, Jefferson Broadcasting Co.; Harold Kirn, Office Civil Defense; Ralph Del Coro, Modern Talking Picture Service; moderator Carl Meyerdirk.*

FILM FESTIVAL OF AGRICULTURE:

(CONTINUED FROM PAGE 17)

event was Caroll E. Morgan, Chief Engineer, Chesapeake and Potomac Telephone Company, who told "The Story of Telstar."

It is important to note some of the "vital statistics" about this important arm of the Federal Government and its long-standing film program. Today, the Motion Picture Service of the USDA, headed by Chief Al Carrello, operates one of Government's most complete motion picture production centers and film laboratories. In fact, it is the only one of its kind in U.S. Government, outside the Department of Defense.

A large stock-footage library is available to private producers, land-grant colleges and television stations. An evergrowing lib of release prints is available request — over 70 film libra most of them in land-grant coll throughout the U. S., receive distribute the Department's p to county agricultural and h demonstration agents, sch groups and other organization all the 50 states.

In 1961, USDA motion pict were shown 218,000 times to million viewers. Currently, in

20 Motion Pictures Cited for Honors at the Centennial Film Festival of Agricultur

Awards of Excellence

Canadian Portrait, 29 minutes, color. Sponsored by **Crown Zellerbach Canada Limited.** Produced by **Frederick K. Rockett Company.**

• The overall theme in this motion picture develops the idea that design and planning are the essential elements in the development of all industry today and particularly in the utilization of the resources that Nature's design has made available to man. A thoughtful approach to the forest products industry in general.

The Cattle Feeders, 21 minutes, color. Sponsored by the **Western Grain & Feed Association.** Produced by **Iowa State University.**

• This film points out the advantages of "teaming up" with competent specialists in the cattle feeding business when it comes to buying and selling cattle at the market.

Fire Fighting in Country Elevators, 20 minutes, color. Sponsored by the Association of **Mill and Elevator Mutual Insurance Companies.** Produced by **Iowa State University.**

• Grain elevator personnel and fire service personnel will learn how to properly fight fires in country elevators in this motion picture, which stresses fire department pre-planning.

Four Star Farmers of 1961, 25 minutes, color. Sponsored by **Keystone Steel & Wire Company.** Produced by **The Venard Organization.**

• Farm boys and adult farmers will find this picture urging them to regard farming as a business which needs efficient business-like management. For business and civic groups, too.

Meat On the Move, 30 minutes, color. Sponsored by **Swift & Company.** Produced by **MPO Productions, Inc.**

• Filmed on location in nine states, this picture shows packing and distribution operations of cattle.

Together, 28½ minutes, color. Sponsored by the **Cotton Producers Assn.,** Atlanta, Georgia. Produced by **International Sound Films, Inc.**

• A story of the humble beginnings of cooperatives, especially the Cotton Producers Assn., which grew to a powerful force in America's economic life and brought prosperity to the farmer and everyone else.

Water, Pattern of Life, 28½ minutes, color. Sponsored by the **Ohio Water Commission.** Produced by **Cinecraft, Inc.**

• A live-action, animated film, describing the many water problems confronting Ohio. For the general public and for farmers who are affected by these problems of water supply, floods, pollution, and recreational crowding.

Wheel Chair Kitchen, 4:33 minutes, black & white. Sponsored and produced by the **Extension Editorial Office, University of Illinois, College of Agriculture.**

• A short film for a mass television audience to show a human side to home economics research for wheel chair homemakers.

Honorable Mention Awards

Durum, Standard of Quality, 25 minutes, color. Sponsored by the **North Dakota Wheat Commission.** Produced by **Bill Snyder Films, Inc.**

• This is a film for farmers all over the world to show how modern equipment helps North Dakota wheat growers produce excellent quality wheat for spaghetti and macaroni products.

The Dynamics of Animal Agriculture, 26 minutes, color. Sponsored by the **Chas. Pfizer & Company, Inc.** Produced by **Star Informational Films.**

• This motion picture has been produced to promote a better understanding of the contributions of animal agriculture to our standard of living. For rural and urban people, mostly.

Honorable Mention Awards:

Five Tons to the Acre, 13½ minutes, color. Sponsored by **Massey-Ferguson,** Produced by **Creative Visual Media, Inc.**

• This film, for farmers and future farmers, demonstrates modern pract of alfalfa growing and handling.

Golden Story of Citrus, 27 minutes, color. Sponsored by **Sunkist Growers,** Produced by **Haessler Pictures.**

• This is a film for the trade, designed to tell the value of Sunkist citrus to show the care of fruit from the time it is on the tree until it is on supermarket shelf.

Hawaii, The Sugar State, 22 minutes, color. Sponsored by the **California Hawaiian Sugar Refining Corporation.** Produced by **Pat Dowling Pictu**

• Designed especially for social studies classes in elementary schools, able for secondary schools and adult audiences, this motion picture is signed to acquaint the viewer with some of the geology and history of Hawaiian Islands and their importance in the agricultural and economic ture of America.

Living With Roses, 30 minutes, color. Sponsored by the **California Chem Company, Ortho Division.** Produced by **Ingraham Productions.**

• This is a film for garden clubs, home improvement associations, etc., wh explores the infinite variety of landscaping effects possible with roses

Modern Mosquito Control, 26 minutes, color. Sponsored by **American Cyana Company.** Produced by **Tiesler Productions.**

• An educational film illustrating the use of new techniques and new secticides in the control of mosquitoes.

Modern Trends in Swine Production, 20 minutes, color. Sponsored by **United States Steel Corporation.** Produced by **The Jam Handy Organizat**

• Hog farmers throughout the country will find hints on the fundame principles of successful hog farming in this film, which presents the n up-to-date methods of swine production, in both confinement and pas systems, as explained by authority Bernard Ebbing.

Reminder to Dairymen, 9½ minutes, color. Sponsored by **Babson Bros.** Produced by **John Colburn Associates, Inc.**

• With live action, animation and interview techniques, this motion pic points out the importance of properly using milking machines.

The Safest Township Anywhere, 27 minutes, color. Sponsored by **Gen Motors Corporation.** Produced by **The Jam Handy Organization.**

• For farm groups of all kinds, youth and adult, this film emotionally logically guides its audience into individual and group action to prom farm safety.

Wildlife at Home, 13½ minutes, color. Sponsored by the **Division of Wild Ohio Department of Natural Resources.** Produced by **Karl Maslowski.**

• This is a conservation education film for schools and sportsmen's cl detailing animal resource conservation concepts while closely viewing fish, mammals, and birds of the midwest.

Special Award

The 1959-60 Eruption of Kilauea, 27½ minutes, color. Produced by the **U Geological Survey** with the cooperation of the **National Park Service, U Department of the Interior.**

• An industrial film for students and for training and orientation within Geological Survey. This film documents the eruptions of Kilauea and sh how the island has been built up from a countless series of similar erupti over tens of millions of years.

We Idolize Service

(THAT'S WHY WE'VE BUILT A NEW PLANT)

We outgrew our old quarters. The new plant offers the most modern facilities obtainable anywhere. No color job will be beyond us, no technical problem *too* technical. This is the world's newest, most modern film processing plant—and we're delighted to say "at your service."

FILM FESTIVAL OF AGRICULTURE:

(CONTINUED FROM PAGE 18)

Department's Washington studios, 40 films and television shorts are in production. Through the Motion Picture Service's active program, fortified by the equally large pool of industry-sponsored and produced farm films, Secretary Freeman's goal of "more information to more Americans" via the screen is well on its way to fulfillment.

Award Recipients Are Noted

Agricultural information specialists from nearly all states attended the Centennial program. Among those on hand to receive awards were James Hanson, Ohio Water Commission (*Water, Pattern of Life*); H. P. Zuidema, The Jam Handy Organization (*The Safest Township Anywhere* and *Modern Trends in Swine Production*); Hayden Evans, Massey-Ferguson (*Five Tons to the Acre*); B. M. Larson, American Cyanamid Co. (*Modern Mosquito Control*); Sanford Platt, vice-president, Hawaiian Sugar Planters Association (*Hawaii, the Sugar State*); and Jack Everly, University of Illinois (*Wheel Chair Kitchen*).

George Kirkland (*l*), *of International Sound Films, accepts award for "Together" from Mr .Barnes.*

Centennial guest *from England was Reginald Hodge, Rank Film Library executive, at exhibit.*

George Kirkland, International Sound Films, received the award of excellence for *Together;* M. Ben Rhodes, American Forest Products, accepted the top award on behalf of the sponsors of *Canadian Portrait;* Robert Requard, California Chemical Company, received the honorable mention award given *Living With Roses;* and Jack Gutman, Iowa State University took home the award of excellence which went to *The Cattle Feeders,* produced at that school.

Several other awards were accepted for absent sponsors by members of the Dept. of Agriculture.

America's Day "special award" recipients *(l to r) were: Dr. Abraham Horowitz, Pan American Sanitary Bureau; Hernando Velasco, 1st Secretary, Embassy of Bolivia; Grant McLean, National Film Board of Canada; Gonzalo Blanco, Agricultural Attache, Embassy of Mexico; Ricardo Stubbs, 2nd Secty. Peruvian Embassy; and Under Secretary of Agriculture Charles Murphy, who presented the awards.*

President and Mrs. Kennedy a "Film Minded" First Family

. . . While nobody really knows whether or not the First Family are playing records these days, it should be noted that they ARE utilizing film. President Kennedy, when presenting the Joseph P. Kennedy Jr. Foundation's $225,000 grants-in-aid to scientists working with the retarded, preceded each award by showing film clips of the achievements of the winner. A few evenings later, President and Mrs. Kennedy's jet trip to Mexico was previewed for hundreds at the Mexican Embassy.

And the Friday before Christmas, Jacqueline Kennedy's trip to India and Pakistan was released to theaters, after Congress decreed that the U.S.I.A. film, which would ordinarily be shown overseas only, be presented to the American public. Of course President Kennedy's filmed *After Two Years — A Conversation with the President,* will be a valuable addition to historical archives.

. . . the 13th Production Review is detailing Federal a-v programs.

WASHINGTON FILM COMMENTARY

by Mary Finch Hoyt

Washington Correspondent for Business Screen

U. S. Chamber's "Aircade" to Alert Nation on Vital Issues

. . . Starting on February 1st, the U. S. Chamber of Commerce's "Aircade for Citizenship Action" will begin a sweep across the nation, bringing to 15 key cities timely, one-day meetings on issues of vital concern to the nation. Hand-picked authorities on major legislation will conduct the Aircade meetings, traveling by chartered plane to each city. In their baggage will be films, slides, "smoke signals" and all possible kinds of audio visual aids.

The important business affairs will be heralded by an advance promotion film which will explain that the issues to be discussed will include: federal intervention in state and local affairs, federal controls of business and agriculture, and labor legislation. For each subject there will be a short, introductory film — and live action, introductions and titles will be incorporated in the presentation.

Audio-visuals *will play important role at Aircade meetings. Set-up for projection is shown at rear.*

The U. S. Chamber of Commerce has an in-house capability at Washington headquarters for producing films and slides and other a v tools; this department is headed by Ken Goddard, Edgar Parsons, and Robert Moxley.

Through their program, the Chamber sponsors and makes films, co-sponsors films which are produced by others in industry, and administers a new experimental program for cooperating with other producers by endorsing and distributing films which help to explain the American economic system. This broad, esoteric subject, it might be added, is probably one of the most difficult to film.

Aircade meetings *in 15 cities wi conducted by authorities on legislation as pictured above.*

Informative New Peace C Film Is Available Nationwid

. . . Peace Corps staff member recruiting students, educating parents and friends of volunt and creating goodwill with a 22-minute color film titled *Peace Corp.* This general info tion film, first to be produce the agency, is narrated by Garroway and is available Modern Talking Pictures in 31 mestic locations.

st Germany's Role in NATO plained in This Documentary

West Germany's contribution NATO's defense program is highlight of a new film, *The e of a New Army*, produced Dr. R. W. Woll for the Ger- Information Center. The m documentary is being dis- uted on a free-loan basis to stations by Sterling Movies .A.

A visiting American Army Lieu- nt narrates this quarter-hour ort about the integration of st Germany's military forces in the North Atlantic Treaty anization. Today's Free Ger- army is shown in a cooper- e exchange program of meth- , equipment and personnel with of the United States.

The film specifically shows the man soldier as a "citizen in form," entitled to the right to e as well as other civilian priv- es.

The Face of a New Army serves reassuring evidence that many erent nations are cooperating the pledge for peace.

3th Production Review is Next!

American Science Film Association Formed to Evaluate Media and Aid Exchange of Data

A Special Washington Report by Mary Finch Hoyt

At Long Last, with a grant-in-aid from the National Science Foundation, an American Science Film Association has been formed. Headquartered in Washington, D. C., the new project will have significant implications for the hundreds of American scientists who are now using the camera as a research tool. In addition to providing inter-communication between these scientists, the organization will search for films which may be presented abroad to show the finest possible image of American science today.

Brigidier General Willard Webb, (USAR), the highly-regarded former Chief of the Stack and Reader Division, Library of Congress, will administer the new program from offices in the Mills Bldg., Suite 601, Washington 6, D. C.

Committee Worked Four Years

For the past four years, an *ad hoc* committee of interested individuals has worked with the scientific community in an effort to locate and disseminate information about films which are being used as laboratory instruments. In March, 1960, this committee met in Washington to lay plans for forming the new official ASFA organization.

Members attending were: General Webb, Randall Whaley, Wayne State University, John Flory, Eastman Kodak Co., Robert Green, National Academy of Sciences, Richard H. Orr, Institute for the Advancement of Medical Communication, Edwin W. Roedder, U. S. Geological Survey, Robert Wagner, Ohio State University, Don Williams, University of Kansas City, Carl Allendoerfer, University of Washington, A. B. Garrett, Ohio State University, O. S. Knudsen, Iowa State University, Daniel Rochford, Standard Oil of New Jersey, H. Burr Roney, the American Institute of Biological Sciences.

Cite Objectives of Association

Their plans, which are now reality, included establishment of an association with its primary purpose to seek information on those films which are making a specific contribution to scientific knowledge in the "hard" or "purse" sciences, including some areas of medicine and agriculture.

The organization was NOT formed to produce, collect, distribute or evaluate films, but to correlate evaluations of science films and refer one scientist to another.

A secondary goal in its statement of principle reads: "The Association seeks to develop and encourage appropriate interchange of scientific films and information about scientific films with national, regional, and international science film associations."

Contact With Lab Film Makers

One serious problem which the committee faced in the past and which the new ASFA will hope to solve in the future is that of *contacting* those laboratory researchists who use the cinematographic technique. Unfortunately, it has been found that the scientist, from modesty or other reasons, often believes that his filmed research is valueless to others.

In one grevious case, for instance, similar camera research work on the heart was conducted simultaneously and independently by two different specialists in different universities. Months, possibly years, of patient study might have been saved for both had there been a "clearing house" for exchanging information about their common interest.

Dr. Robert Green, *National Academy of Sciences, plays key role in forming ASFA.*

Quite naturally, in an age when there are more scientists alive than ever before and when vast amounts of scientific knowledge are recorded daily, these problems will increase.

The association will not only serve the university scientist, but those in industry and education as well. It is hoped that businesses with important science films will aid in fostering a mutually beneficial exchange of information with American and international scientists. And ASFA will undertake reference service for teachers who need films on specific subjects which can be used as instructional devices in science education.

General Willard Webb *heads new Science Film Association.*

In an as-yet-to-be published report on "Scientific Research Films Made at U. S. Universities," the need for and value of an American Science Film Association has been summarized.

Foreword Outlines ASFA Goals

Its foreword, written by Robert E. Green, National Academy of Sciences and Leslie P. Greenhill, Pennsylvania State University, details an important survey which contributed to the establishment of ASFA. It reads:

"Scientific research films are believed to be a valuable source of data and information, but this information has never been systematically collected or made available for reference on a nationwide basis.

"To ascertain the extent to which research cinematography is now being used in both pure and applied fields of science, and to explore ways of making this experimental data available, the National Academy of Sciences-National Research Council in 1959 received a grant from the National Science Foundation to conduct a survey of scientific research films made in universities in the United States.

"Film As a Scientific Tool"

"The subject area of this study was confined to the use of motion picture film as a scientific tool — a device to record experimental data and a reporting medium in scientific research. It did not include popular science subjects or films produced for science education, although some sequences from scientific research films are adaptable for both these uses.

"The survey was conducted with the 509 U. S. colleges and universities which have graduate programs. Individual letters, with film data forms and information sched-

If your sales promotion budget isn't giving you the mileage it should, then consider this: Very often a **visual presentation** may cost less and produce more results than your current sales promotion methods. Because regardless of your budget, film can sell any product or service with greater effectiveness than you ever thought possible. And you don't run over-budget because Filmack's commitments are firm.

One Filmack client (name on request) saw his limited budget not only give him a better sales meeting through use of a slide film, but saw sales rise to carload quantities. We would like to prove that film can do an effective job for you. Send for your copy of an actual case history that shows how Filmack solved a problem like **yours.** Or call Filmack for your next sales presentation and see just how far your budget will go.

ules, were sent to university scientists listed by their administration as users of cinematography in their research.

"Replies indicated a wide range of scientific subjects recorded on research films, with the greatest reported use in the fields of engineering and medicine. Responding scientists also gave opinions on the usefulness of cinematography in their research, and many wrote letters with suggestions for making these research films and film data more widely available.

"Report recommendations, based on these data and suggestions, include the establishment of a film center to collect and disseminate information on scientific films and film techniques. Also recommended are a number of specialized film centers for the several scientific disciplines, probably located at universities in various parts of the country. These university film centers would maintain a film library loan service and provide the assistance of expert cinematographers for the production, editing, and reproduction of scientific films. Each film center would have a scientific advisory board.

Centralized Information Service

"A centralized information storage and retrieval service for scientific films, together with the opportunity of consultation with experts at the film centers, would be of great assistance to the individual scientist who is undertaking a filmed research project. The cataloguing and loan services would also be available to scientific professional organizations and to government, industrial, private, and university research organizations where scientific films are made and used.

"Throughout the pilot study in 1960 and the main survey in 1961 the investigators received in able assistance from scientists scientific cinematographers in country and abroad. Definitic film terminology and the pre tion of forms used in the st involved consultation with ex in the Eastman Kodak Comp with Film Surveys, Ltd. and the Department of Scientific Industrial Research (both in don), and with the Royal Pl graphic Society of Great Britai

Organizations Aiding the Stu

"The American Science Film sociation, the NAS-NRC Offi Scientific Personnel, and the F sylvania State University Div of Academic Research and Ser provided encouragement and a tance at all stages of the study

"Finally, we wish to express thanks to the many university entists who supplied data on research films and offered ments and suggestions to a makers and users of scientific in the United States."

THE EDITORIAL POSTSCRIPT

Our Feature on Mobil's Driver Game Exhibit at Seattle's Fair Overlooked a Film Credit

We missed one important credit line in our preceding Issue Seven when describing the highly-effective Mobil Driver Game exhibit at Seattle's World Fair. The exhibit was designed and engineered by Dramaturgy, Inc., a Wilding subsidiary, but there was an important film used of the Mobil Economy Run.

The picture, which simulated cross-country driving conditions against which a dozen-at-a-time participants pitted their skills, was produced by F. K. Rockett Productions, Hollywood. Rockett was chosen for this assignment because John J. Hennessey, now an executive producer there, has supervised filming of every Mobil Economy Run since 1950. Earlier films were handled by John as a consultant and a director before his association with Rockett.

About half the footage required for skill-test scenes running about five minutes came from last year's Economy Run picture. The balance of the material was staged to complete about 15 different situations which actuated the cams within each machine.

Included in the Seattle picture were a winding mountain road, a train-race, a "burnaway" from a stop-light. In one setup a police car pulled into traffic and, while the driver was "in the right," the normal tendency of a motorist on sighting a police vehicle should be to slow down; this was an intentional "trap" to test player skills.

Another scene provided the distraction of a girl's pretty legs emerging from a car within the driver's view, while a boy on a bicycle crossed in front of the participants' path. As might be expected, this scene had more effect on teen-age and older males than on young lads and on females of any age. Timing was one of the critical elements in making these scenes effective and making the whole "game" a real test of traffic capability.

We try to give you the "whole story" and now your file on a very successful Seattle exhibit idea is complete!

Dave Garroway Narrates a Peace Corps' Film

☆ Dave Garroway tells a story of adventure abroad with the Peace Corps in a new film just released for free loan to adult and school groups. Titled *The Peace Corps*, the film runs 27 minutes in color.

Garroway illustrates Peace Corps operations in Africa, Asia and Latin America in showing dedicated workers attacking human problems. Sequences filmed abroad show how Peace Corps volunteers are assisting and teaching in such fields as agriculture, education, health and home and child care.

The film features Garroway's interview with Peace Corps Director Sargent Shriver to highlight selection and training of volunteers. Sequences from college campuses and the Peace Corps training camp in Puerto Rico illustrate the preparation necessary for overseas service.

The free film was produced by the Peace Corps in cooperation with the Advertising Council and is being made available through Modern Talking Picture Service.

Like some people we know, cameras don't move by themselves; they have to be pushed around.

A basic requirement in good camera movement is smoothness —a smooth beginning—middle and end when panning, tilting or both.

Years ago, when we had to depend on friction heads for movement, most cameramen acquired great skill in using these. Also, many cameramen depended on geared heads cranked with both hands which required tremendous dexterity.

Today, with our advancing technology; adapting principles of hydraulics and of gyroscopes we have evolved the fluid and gyro tripod heads. Great skill and dexterity is no longer an absolute requirement for fine, professionally smooth camera movement. Smoothness is now a built-in characteristic of each of the tripod heads shown here. We at F & B sell and recommend these most enthusiastically.

If you are still doing great work with outmoded friction or geared heads, we congratulate you. Still we urge you to modernize. Why not treat yourself to one of these fine fluid or gyro head outfits, and see if you don't agree that it makes your work easier.

With the help of many skilled cameramen, we have made up a chart so that you could select the outfit most suited to your needs. If you want more detailed information on any of these, or if you would like to "try out" or arrange for a demonstration with no obligation, please write us.

SIGHT & SOUND

Value of State's Crops Told in California Growers' Film

☆ California agriculture has a powerful new advocate at work on its behalf. Destined to show citizens of that state, their neighbors and legislators the value and importance of food, fiber and livestock production from San Diego to the Oregon border is a new color film titled, *Horizon*.

The comprehensive picture was shot by Wilding, Inc. crews who traveled 7,800 miles to get sequences on grain, fruit, vegetable and livestock operations. Sponsored by the Council of California Growers, *Horizon* was premiered at the 3rd annual meeting of the Council in San Francisco, December 3rd. Spontaneous applause from leaders in agriculture and allied industries greeted the film's inaugural showing at the Mark Hopkins Hotel.

Joel McCrea, film star and cattle rancher, narrated the picture and has taken an enthusiastic role in the affairs of the Council.

Horizon was directed by veteran H. B. (Dave) Butler, Wilding V. P. at San Francisco. Script is by Tony Sassano and client liaison was the responsibility of Thomas C. Ellick, Executive Assistant, Council of California Growers.

Showings have already been requested by such groups as the Bank of America (Board of Directors); Standard Oil of California; Pacific Gas & Electric; Sunkist Growers, etc. The picture was to be screened in January by Governor Edmund G. (Pat) Brown, who has requested members of the state legislature to attend.

Association Films will distribute *Horizon* on its release.

Browning Award to Encourage Young Student Film Producers

☆ The Camera Mart, New York, is sponsoring the "Irving and Sam Browning Memorial Award" for promising university film production students. The purpose of this annual award, recently announced by Camart president Samuel "Chick" Hyman, is to encourage young student film-makers to produce a film planned by themselves, under professional conditions.

Participating in the award program are the Motion Picture Departments of New York University, and Columbia Univ
Every June, the Motion P
Department heads at each of
three schools will designate th
dent they believe has show
most promise while attendin
production courses, as eligib
the award. The first series of
awards will be granted in
1963.

Each of the students chos
their schools will be give
award certificate by The C
Mart which will be worth
towards the rental of profes
motion picture equipment. I
terms, the award means that
thousands of dollars worth o
fessional up-to-date equipmer
be available for film produ
purposes by each of the
award students. *(Cont'd a*

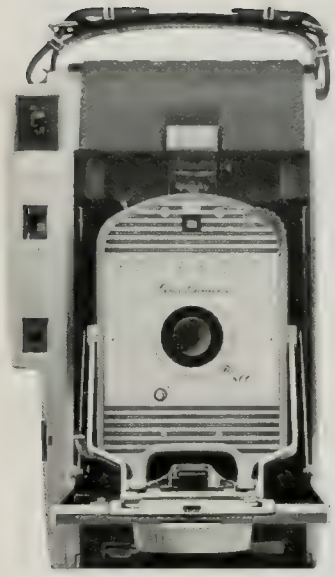
sociation Films Forms New vision for Theatrical Films

Association Films, Inc., has med a new division for the dis- ution of sponsored short sub- s and specialized films to tion picture theaters.

n announcing the new division, R. Bingham, president of the pany, said, "Our decision is ed on the dramatic increase in ater construction and changing dience attendance patterns. Ac- ding to the "Theater Owners America", construction of 278 theaters was started during past two years. Significantly, of these theaters are of the losed auditorium type located marily in affluent urban areas shopping centers.

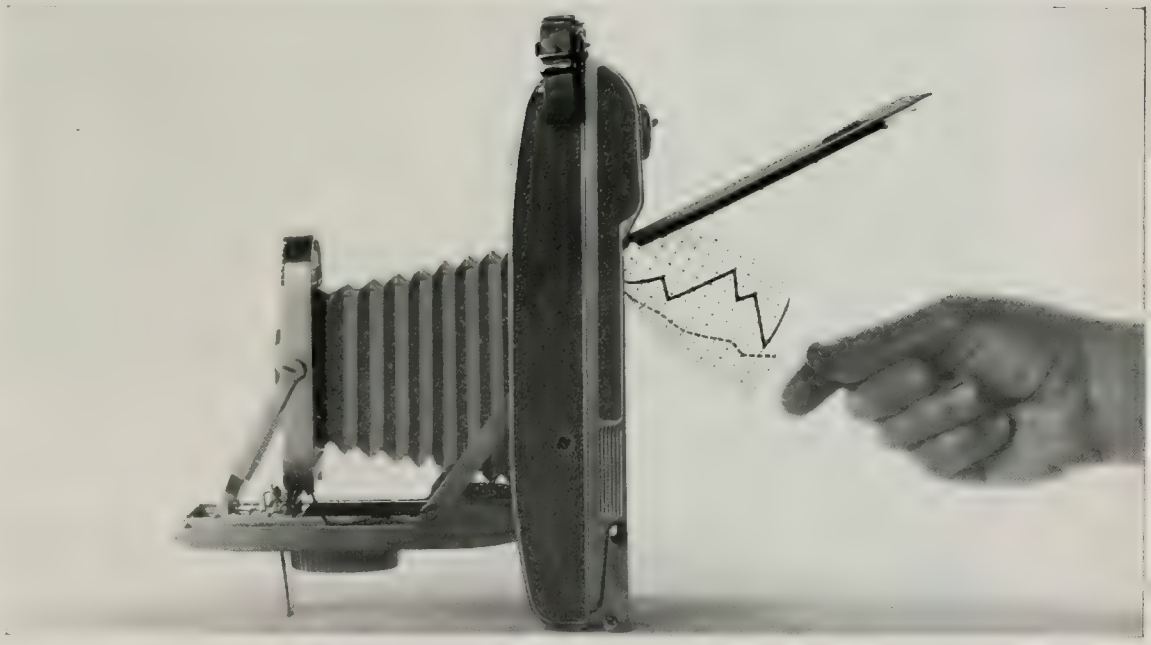
Changing Habits of Audience

Box office attendance figures w a marked change in theater- ng," Mr. Bingham said. "While diences are far more selective, pictures from this country and oad do better than ever. This ctivity is most important to the d of highly-specialized informa- nal and entertainment films we handle."



Robert Finehout has been ned vice-president in charge of new division and will be re- nsible for promoting the service d establishing distribution pat- ns. Booking and servicing theaters will be supervised by rry Willard, president of Thea- al Film Distributors, from ex- nges in 30 key cities.

First Release is "Europa"



Association Films' first theatri- release is *Europa*, a ten-minute mated color short (produced by ican Films) that is available theaters free as a public service the European Economic Com- nity. The film is in first-run en- gements now in New York, Bos- , Washington, Chicago, Los geles and San Francisco.

The new division will assist key bookers to promote spon- ed shorts; publicize first-run gagements; provide sponsors h advance playdate information; l arrange for previews and spe- l screenings.

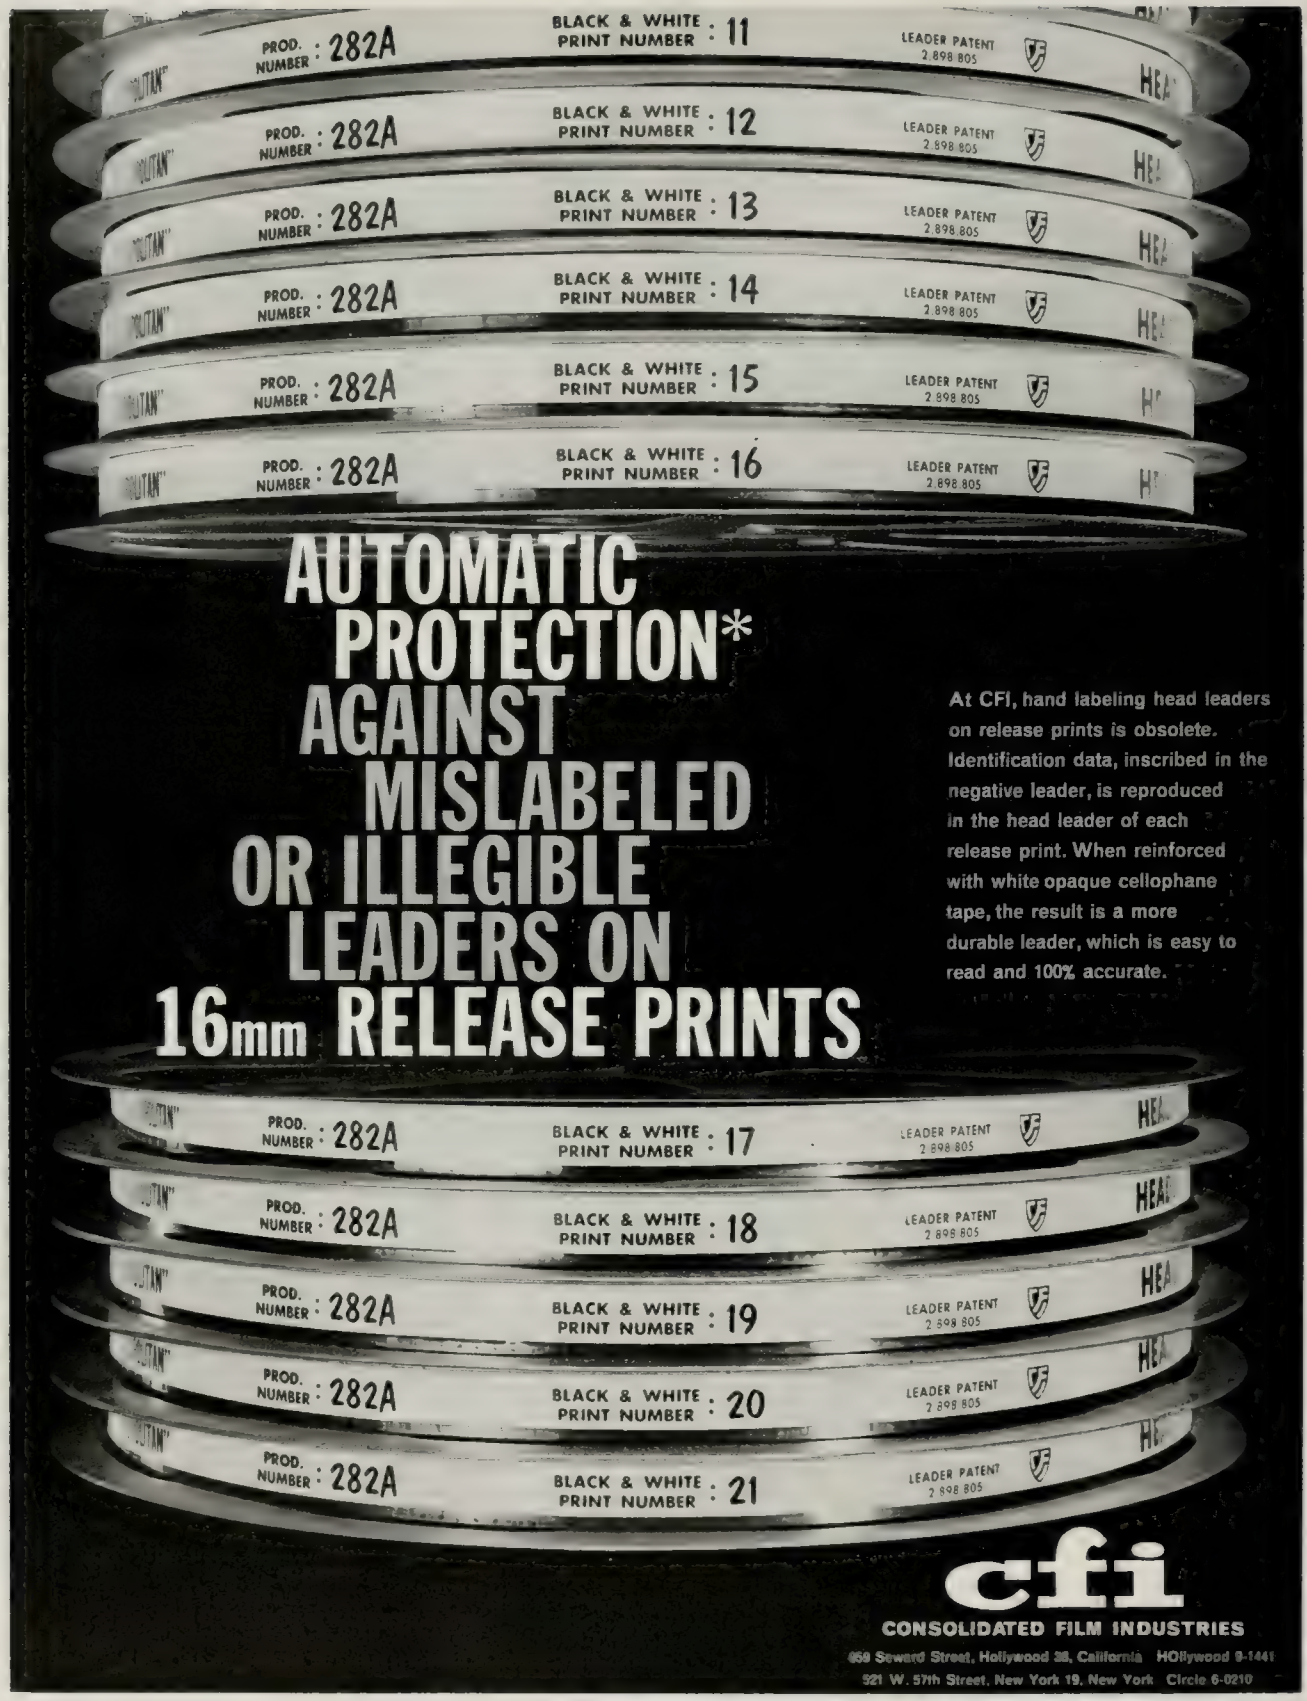
"Polaroid" & "PolaLine"®

This and 55¢

gets you a finished slide in less than 90 seconds

"This" is a regular Polaroid Land Camera. The 55¢ is the per-exposure cost of special transparency film, including the mount.

All you have to do is load the film into the camera, snap the shutter, pull the tab and wait a moment. Then open the back of the camera and peel off a transparency.



After a quick hardening and mounting in a click-together frame the slide is ready to show. From snap to screen in less than 90 seconds... just about half the time it takes to cook your morning egg. And at about ⅓ the cost of conventionally processed slides.

A new Polaroid PolaLine Transparency film is especially designed for line copy work. The blacks are really black, the clear areas really clear. These are 3¼ x 4 transparencies for standard lantern slide projectors. Development time is 10 seconds.

There's another film for continuous tone work. It comes in two sizes, one for standard slide projectors and one for use in a complete system that employs 2¼ x 2¼ slides in a Polaroid Projector. Development time is 2 minutes.

All three projection film types can be used with any Polaroid Land Camera that uses 40-series film except the J-66.

For more information on how this film will help you in your work, write to Technical Sales Dept., Polaroid Corporation, Cambridge 39, Mass.

*2898805, 3022165.

The Consensus of Quality in Recognized Competition

THERE IS NO SUBSTITUTE for results attained by films which accomplish their intended goals; the statistical facts showing millionfold audiences which saw important sponsored pictures last year give equally important evidence of value received on film investment. But this "consensus" summation of award's honors achieved by 95 films in the past year is worthy of close attention and review.

Such well-recognized competitive events as the American Film Festival, Columbus' "Chris" Awards, the National Visual Presentation selections, the Industry Film Producers' Awards and the National Safety Film Contest represent the best judgment of literally hundreds of the nation's *most-interested, best-qualified reviewers* of these pictures. Selection of U. S. films for overseas festivals is made by nationwide juries who serve the national Committee on International Non-Theatrical Events (CINE); films honored abroad lend further credence to the awards they receive here at home.

This symbol (*) appearing after Columbus Festival citations indicates the award of an Honorable Mention certificate.

Reader attention is especially directed to the titles receiving multiple award mentions in this round-up of 1961 winners.

Bronze plaque award *is highest honor given by National Committee on Films for Safety.*

General Motors Picture Presents a —

Vivid Safety Lesson for American Farm Families

PONSOR: General Motors Corporation.

ITLE: *The Safest Township Anywhere,* 27 min, color, produced by The Jam Handy Organization.

Cited by jurors for honors at the Centennial Festival of Agriculture Films, this 27-minute color picture serves one of the major areas for potential accidents — the farm. Not only is the farmer (and his family) prone to highway disasters but the typical farm plot is a source of many other hazards. Those new-angled implements, the abandoned well, uneven terrain that will tip a tractor, silo hauling. There are a thousand and one likely spots for trouble.

Keeping members of the farm family *alert* to such possibilities and aware of the need for safety-consciousness is the primary goal. And

Abandoned well *is just one of the many safety hazards on the farm which are featured in "The Safest Township Anywhere."*

hat's the objective of *The Safest Township Anywhere,* sponsored by GM and available nationwide through its film libraries.

Aimed to Change Attitudes on Safety

Purpose of this picture is to encourage safety on the farm. It is an attitude-forming motion picture which emotionally (and logically) guides the viewer into action on behalf of his safer future.

The film's story is that of a family living on a farm and in a township where accidents "just don't happen." No matter how many needless chances the people take, something or other always comes along to keep them out of serious trouble. Then the situation changes and the people are aroused enough to fight back by keeping safety in mind — all the time. The whole neighborhood takes action, making the township the safest place anywhere.

How to Borrow This Useful Picture

Write the General Motors' Film Library, 3044 West Grand Boulevard, Detroit 11, Michigan for a loan print or the address of the GM library nearest you.

* * *

Note: *The Safest Township Anywhere* is listed in the Centennial award winners on page 18.

BEHIND-THE-SCENES IN AIRLINE FLIGHT OPERATIONS

Flight Plan for the Veteran Traveler

American Airlines' Film Takes Top-Level Audience of "Regulars" Through Operations

A NEW PICTURE just released by American Airlines is aimed at 5,000 experienced, regular passengers, rather than at occasional or neophyte air travelers. AA figures that a substantial amount of traffic can be ascribed to these experienced travelers, and by showing them — in their own terms — American's superior qualifications, the airline may stake a claim to an increasing share of their business.

The 13-minute, color motion picture — untitled — concentrates on the extraordinary amount of preparation and planning that go into every flight. We watch operations people start to plan for a single flight to Los Angeles. Dozens of routes are always considered. Four are planned in detail. In the weather office, winds, temperatures and isobars are fed into an IBM calculator which whirls and blinks and comes up with a tentative flight plan — "Jet route 60-62 at 33,000 to Joliet."

Safe Flying is a Matter of Figures

In the "load house" the clerk works at his adding machine: "passengers 18,870 pounds, baggage 4,000, mail 300, express 100, freight 6,000 (mostly chirping parakeets), equals payload 29,270."

He pulls more IBM forms into the picture, notes estimated fuel burnoff at 73,167, checks with Los Angeles and adds 15,000 pounds for fuel over destination, a regular safety precaution on all flights.

He then feeds these figures into another calculating machine and records total weight and balance. The load house will be busy checking and rechecking these figures until a few minutes before departure.

But every flight is planned more than once — the Captain and his co-pilot go over each computation until even the details of take-off are planned, the precise spot on the runway to lift off, the precise seconds to reach a hundred knots.

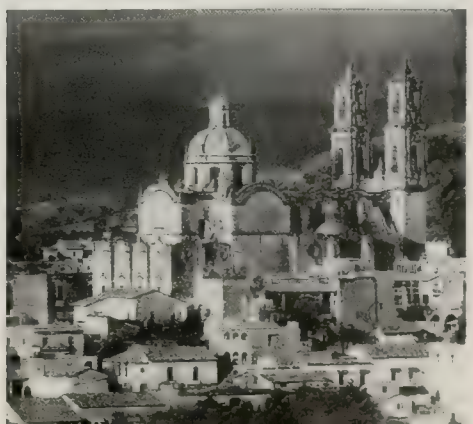
The new American Airline film is a convincing proof of the narrator's comment: "Your flight is flown as planned, planned as flown.

Below: *pilot and co-pilot of an American Airlines' plane check flight computation.*

Above: *An American Airlines' stewardess checks in before departure on a flight.*

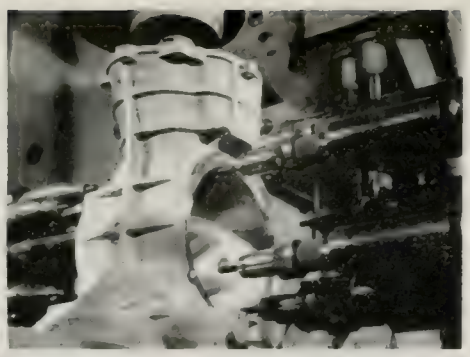
Your departure, your in-flight comfort, your on-time arrival — all are planned."

Synchronous sound throughout, with no music, the film shows real AA people doing their jobs. As a realistic, documentary motion picture, it is a tour de force.



Promoting Travel Interest in Mexico

☆ Mexico's variety and beauty as a country and vacationland are highlighted in a new color film, *Mexico Impressions,* just released by American Airlines. The 14½-minute travelog, produced by Audio Productions, is available to community and business groups, clubs, churches and television stations on a free-loan basis from Association Films.



The Mexico that is a combination of sea and sun, of living and historical monuments to the past, of unbelievable diversity of activity, is featured in the new film. *Mexico Impressions* gives the traveler capsule glances at the wide range of amusements, scenery and cultures that a Mexican holiday offers.

The film switches from the gay and cosmopolitan life of Mexico City to the tropical beauty of Acapulco and the past-evoking quaintness of Taxco. It gives the tourist a cross-section of the pleasures and sights that await him in Mexico.

Below: *view of Taxco from the American Airlines' picture, "Mexico Impressions."*

Automaker With an Eye to the Future

Volkswagen Brightens Image With Exciting Look Inside Its Ultra-Modern Plants Abroad

SPONSOR: Volkswagen of America, Inc.

TITLE: *The Right Hand of Plenty*, 22 min. color; (16 & 35mm). Produced by Marathon International Productions, Inc.

☆ In a spirit of friendly affection, some Volkswagen owners have posted little stickers on their back windows reading "Made by der Elves in der Black Forest." This doesn't bother anyone at Volkswagen for friendly affection sells hundreds of thousands of the little cars all over the world every year.

The "Elves" bit is amusing, but it is about as far as possible from the true state of affairs as it is possible to be. Few factories anywhere are as modern and efficient as Volkswagen's giant works in West Germany.

On Volkswagen's public information calendar this year is a project to establish the image of the Volkswagen as not only trusty and thrifty and solid, but ultra-modern and *exciting*. One way this project is being carried out is with an exciting new film called *The Right Hand of Plenty*, produced by Marathon International Productions, Inc.

This 22-minute film demonstrates that as man with the invention of the wheelbarrow relieved his back from strain and became a bit less the animal, his contrivances of today are freeing mind and body from monotony and drudgery and releasing imagination, spirit and intellect.

New Contrivances of Today Set the Stage

The theme is arrestingly introduced as we watch three clever contrivances now in use — a "self-dialing" telephone; a long-distance, instantaneous reservation and flight planner which, combined with a computer, tells Stockholm, or any other place in the world, in seconds, if there is a space on a plane from Rome to Athens on a specific day and hour; an intricate, automatic "tool" covering acres which is used for cracking and refining oil.

New Processes Along the Production Line

The giant, ultra-modern Volkswagenwerk in Wolfsburg, Germany, is used to demonstrate the latest in mechanization and industrial processes that give man an opportunity to use his brain instead of his hands. Particular processes along the way are a gearcase line that performs in one continuous operation what had formerly been 44 separate jobs; automated machines making intricate motor blocks in one continuous operation; eerie electrostatic painting where bodies assume color from an invisible mist of paint in the air.

The wrap-up is a combination of a photographic impressionistic reprise of the theme, combined with a wild and exciting score.

Distribution of *The Right Hand of Plenty* will follow several channels. All dealers in the United States will have a print to use in community showings and in their showrooms. Club and group audiences will be served via all exchanges of Modern Talking Picture Service. Some television and theatrical exhibition is planned in the United States, and extensive theatrical bookings are being made abroad. Six language versions in addition to English have been made: German, French, Dutch, Swedish, Spanish and Italian.

Important credits for the film go to Konstantin Kalser, producer; Kenneth Baldwin, director; George Silano, camera; Philip C. Lewis, script. Prints, in 35mm and 16mm, are by Technicolor.

Scenes from "The Right Hand of Plenty" show the latest in automotive production methods.

World View on Credit for Development Abroad

SPONSOR: Chase Manhattan Bank.

TITLE: *Windows on the World*, 30 min. co produced by MPO Productions.

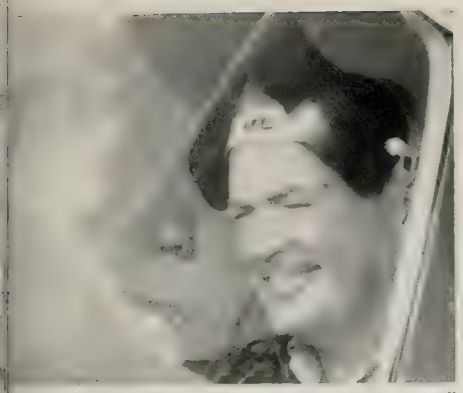
☆ The Chase Manhattan Bank's new f *Windows on the World*, shows how the b participates in advancing the economy of tions and peoples all over the world.

From its Wall Street tower in lower M hattan, the big banking institution — over a hundred branches in New York s ing ten million people — looks out from high windows to the countless places throu out the world where Chase Manhattan fina ing is playing an important part in the ec omy.

In agriculture, for instance, banks help pay for the plants where farm equipmen manufactured — extend credit to the l dealer who sells the machines — and han the contracts which enable the indivic farmer to purchase them.

But progress is not limited to any one tion — everyone wants to achieve it. Thro these windows on the world we can look

Scene in Chase film "Windows on the Wor



yond our own national boundaries. To the lands of the Caribbean, for instance, wh mechanization of the sugar industry is incre ing the speed and volume of processing. Panama, the land is right for cattle-raisi and bank financing is encouraging this imp tant new industry.

From sugar cane fields to steel mills, ba ing aids industry through loans — loans t span needs from personal to big business. T loan aids progress and growth, and it is business of the bank to participate in pr ress.

Every bank is a symbol of progress as stands ready to aid in the purchase of n plants and machinery. With a philosophy t banking is not just arithmetic — it is peo — today's banks do truly provide windo on the world.

The film travels to countries spanning t world — in Europe, Africa and Asia. It v produced by MPO Productions in associati with Film Counselors, Inc. Director was V tor Solow.

Association Films is the distributor.

scene from "One Eye on the Instruments."

A Federal Aviation Film to Encourage Pilot Safety

PONSOR: The Federal Aviation Agency (Flight Standards Service).

ITLE: *One Eye on the Instruments*, 25 min. color, produced by Fred Niles Communications Centers.

With countless thousands of small plane operators aloft every day, the task of maintaining afety in the air and on the field is fully as important in this phase of aviation as it is among he larger commercial craft. For many of those ho fly the Aeroncas, Cessnas, Pipers and Bonanzas do not have the extensive training given ransport pilots; more than a few are like the eteran flyer, Bob, who has logged so many ours in the air that he likes to think he can fly by the seat of his pants."

Federal Aviation Agency people take a dim iew of such old ideas; deeply concerned with light safety they want licensed pilots to learn to y by (and stick with) the modern instruments hat are enabling small craft as well as the big nes to surmount the uncertainties of wind and eather. This is the primary mission of *One ye on the Instruments*, another of the FAA's ontinuing program of education for pilots.

The picture is straightforward "pilot-to-pilot" naterial with no wasted words or action; creatd as training material, the story is minimal. 'ilots Bob and Tom, flying identical small raft, are headed for their home field. Bob is

ilot Bob (*left*) *is ready to listen to some riendly advice about those instruments he as been trying to get along without . . .*

the "bucko" type, he can "feel" his way home. Tom knows the route, too, but he keeps "one eye on the instruments."

Weather closes in and Bob is in sudden, deep trouble. He makes it home alright but the close call shows him how unfamiliar he has become with instrument technique. Airport's manager and Tom remind a now willing candidate that the road to becoming a better, safer pilot is through the FAA's instrument course.

When Actions Speak Louder Than Words

Pan American Scores With Wordless Series of Three-Minute Human Relations Vignettes

SPONSOR: Pan American Airways.

TITLE: *Don't Hesitate to Ask*, 3 min. b&w, produced by Henry Strauss & Company.

☆ Probably the most "never-say-die" traveler in history is the nameless (and virtually speechless) hero of a series of three-minute training films made for Pan American Airways by Henry Strauss & Company. Intended solely for showings to company personnel around the world by Pan Am's Sales and Service Training Department, these vignettes of human relations have had striking success in the field.

The first of the series, entitled *Dial S for Service*, showed the hero imprisoned in a phone booth . . . left hanging on the line as he tries to get information on a flight reservation. This "short short" eventually got our man to England where *Dial S* was one of four subjects picked to represent American business films at the Harrogate Festival several years ago.

Nothing daunted, the principal character tried again in *Information Please* and was ignored with studious courtesy at an airline ticket counter for another three minutes of film time that seemed like a century. This time, however, he wound up on exhibition at the Vancouver International Film competition as a selection of the U. S. Committee on International Non-Theatrical Events (CINE).

Now he's back again . . . this time actually airborne . . . in *Don't Hesitate to Ask*, a pantomine portrayal of the exquisite frustration which a passenger can suffer when pursers or stewardesses focus so hard on the *job* that they lose sight of the *people* for whom they're doing it.

But, again, his persistence pays off. *Don't Hesitate to Ask* landed the hero of these vignettes in West Berlin last fall when the film was selected by a committee of U. S. industrial film authorities as one of the fifteen American entries competing at the Third International Industrial Film Festival, sponsored by the Council of European Industrial Federations.

As the accompanying illustrations show, *Don't Hesitate* is an eloquent commentary on the power of "unspoken communications;" and of the need for *anyone whose basic job is public service* to be sensitive to them. Like its two predecessors, the short film is also an example of the attitude-development and training effectiveness which can be achieved by films with low budgets and high creativity.

Though these pictures would be highly useful in many similar company situations, *Don't Hesitate to Ask* was produced for Pan American Airways' Sales and Service Training Department and it is *not* available for use outside the company.

HOPEFUL: *all he wants is some service.*

HUNGRY: *but he doesn't seem to be there.*

HARRASSED: *what can he say but . .* "HELP!"

"I'm tired of playing in my yard . . . think I'll march, be a middie! They're great . . . don't lose a step and they sure have shiny shoes."

A Boy, His World and a Penny Whistle

"Mark" is a Boy Aged Eight and also an Award-Winning Motion Picture Worth Seeing

FRESH AS A SUMMER'S BREEZE across Chesapeake Bay, the light-hearted adventures of an eight-year old named Mark on the streets and byways of picturesque Annapolis have been set to the appropriate, original music of jazz artist Marian McPartland and her trio. Randy Hall toots his ten-penny whistle as Mark steps out with midshipmen from the Naval Academy; the original music of *Little Boy Blues* catches a lad's brief interlude of inexplicable sadness.

This all adds up to the wondrous 21 minutes that make up one of the year's unsponsored "sleepers" titled *Mark*. The film was directed with a father's loving touch by Washington, D. C. producer George F. Johnston and his assistant, Laura Sheridan. What could well be some sponsor's real "find" for theatrical and 16mm audience release is a picture that *has* been around just long enough to pick up deserved honors at Edinburgh and Venice Film Festivals abroad and at the Columbus Festival.

"I'll sail way, way out to sea . . . maybe even 'round the world"

• The idea for *Mark* began with the youngster's observation that "people, like flowers, come in different colors." *Mark's* world, bounded by the Bay and the Academy walls, is colored by the sails of his "pirate ship" and by the people with whom he shares his day. To know *Mark*, you also have to know the water, the sky and the sheer love of *doing*. *Mark*, in essence, is the texture of "growing up one minute at a time;" of the important events of a child's day; and of the sheer happiness of *being* a human being.

Happily, George Johnston has kept *Mark* from becoming a character out of *I Love Lassie*. The picture was made "catch as catch can" between assignments at his Washington Video Productions' studio in the capital.

Mark's music, composed for the film by Miss McPartland, includes a nautical bit called *Marian and Randy Noodle at Sea: Mark's Time* and *Little Boy Blues* are jazz classics worthy of a connoisseur's library. The film might have been produced in leisurely fashion but there's sharp artistry in its tight editing, excellent camera work; and a soft-focus color sequence of a sailing scene on the Bay is one you won't soon forget!

At left: *producer George F. Johnston chats with music's composer, Marian McPartland.*

Randy Hall carried the tempo of Mark's tour on penny whistle.

Using 8mm Silent Films —

DuPont Shows Retailers Basic Facts on Apparel

DU PONT, like all manufacturers, knows th sales training is a vital aid to all store whether they be large department stores specialty shops. By the same token, the hug number of branch stores that have mushroon ed in recent years has presented a major prol lem — reaching the most number of sal people, part time and permanent, in the mo effective manner and in the least amount time.

Cognizant of this problem, Du Pont's Textil Fibers Department has pioneered a new sal training technique. Specifically, it is a ligh weight, portable projector with snap-in ca tridges capable of showing four-minute, siler films on the latest apparel developments utiliz ing Du Pont fibers.

Light Technicolor Projector Selected

After a number of tests, the company decid ed on the eight-pound Technicolor, 8mm pro jector. First use of the projectors by compan representatives throughout the nation was t tell sales people, buyers, and merchandise mar agers about the advantages of "Dacron" poly ester fiber when it's used in a blend with woo for men's fall and winter suits. It is planned t use the projector for training in many other en use areas during the coming year.

Three films were produced by Audio Pro ductions, Inc., New York, to show (1) neat ness, (2) comfort, including warmth, and (3 the excellent styling potential afforded with th use of "Dacron".

One of the most convincing demonstration to retailers has been the cold air chamber tes in which it is shown that two fabrics of ident ical construction, but different fiber content both weighing 10½ ounces per yard are abso lutely equivalent in their ability to provide pro tection from the cold. The one fabric is a blend of 55 per cent "Dacron" polyester fibe and 45 per cent wool and the other 100 per cen wool.

Program Achieves Maximum Flexibility

This system of demonstrating and telling th story about Du Pont fibers has allowed a maxi mum amount of flexibility, a major factor wher dealing with a variety of store conditions an hours. The visual part of the message is bright clear, and right to the point. The audio — read from a prepared script — can be adapte to different circumstances, while the projecto can be easily stopped at any point should there be specific questions.

Supplementing the three short films, a 10 minute colorsound film, titled *Relax-Go Neat* was made from the same footage for use a women's clubs and similar groups while a 4½ minute public service film for television, "Nea New Man," also has been produced.

Store training directors as well as the person nel on the "firing line" throughout the country have praised this new sales technique.

STAR ATTRACTION: "THE LADY AND THE STOCK EXCHANGE"

The Woman's Viewpoint on Investments

The New York Stock Exchange is Explaining the Investment Process to Millions Through Its Public Education Films; Latest Picture Aimed at Women's Audience

THE TRADING FLOOR of the New York Stock Exchange became a theater early this fall as Hollywood movie screens and projectors replaced the conventional ticker projectors and screens. The transformation took place for the premiere showing of a new 27-minute color motion picture, *The Lady and the Stock Exchange*, produced by Paramount Pictures for the New York Stock Exchange.

The film, which stars Janet Blair and Eddie Bracken, and features Everett Sloane and Jim Backus, links entertainment with instruction as it dramatizes the right versus the wrong way to invest. Janet Blair and Eddie Bracken are teamed as a husband and wife who are anxious to make their first investment — but narrowly avoid a pitfall.

Great Potential Audience of Investors

"It's our hope," said Keith Funston, President of the Exchange, "that this film will help explain the investment process to millions of Americans who've never made a securities investment or been inside a brokerage office. Our surveys indicate that there are some 35 million people who are interested in learning more about securities and we want to be sure that they know how to approach investing intelligently."

The Exchange's film program, which is the responsibility of Ruddick C. Lawrence, Vice-President in charge of public relations and market development, and supervised by Robert E. Gurvitz, Manager, radio and TV services, has provided 16mm and TV audiences with a series of films in a variety of styles for many years.

130 Million Have Seen Four Pictures

The Lady and the Stock Exchange is the first screenplay to be produced for the Exchange, but other documentaries and cartoons have been seen by millions of people.

The Exchange has found films to be ideal for reaching large numbers of people at a reasonable cost. Four current motion pictures have been seen by an estimated 130 million people at a cost of only a small fraction of a cent a person. These films are two quarter-hour cartoons (produced by John Sutherland) — *What Makes Us Tick?*, which explains what stocks are and why there is a stock exchange; and *Working Dollars*, which shows how an average man puts his dollars to work. Two technical films for investors — *The Big Board* and *Bid and Asked* — show the mechanics of trading on the floor of the Exchange.

Above (*l to r*): *Vice-Pres. R. C. Lawrence; Robert Gurvitz, Mgr., TV & Radio Services for Exchange, pictured with film's stars.*

Interest in Stock Exchange movies is boosted by the work of investors' investment committees composed of member firms in the Exchange in 96 cities. These committees not only give investment courses to a million and a half people a year, but conduct public service forums about investing on television, and films play an important part in all these programs.

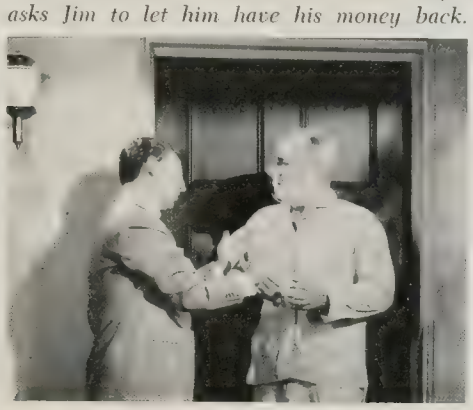
New Film Intended for the Ladies

The Exchange is now particularly interested in reaching women, who make up an increasingly large proportion of the investment public. For this reason, Paramount Pictures, which was able to offer four stars of considerable "marquee" value, and the traditional Hollywood gloss, was chosen to produce the film.

Premiere: "*The Lady and the Stock Exchange*" *was shown on trading floor in New York.*

The theme of the picture is that there are two ways to invest: Janet Blair's, which is right; and Eddie Bracken's, which is wrong. The ladies will appreciate this, and it ties in with a New York Stock Exchange series of advertisements now going into women's magazines.

Although the film is a pleasant family comedy, it is loaded with easily assimilated educational material. It stresses the danger of tips and rumors, points out the risk factors and urges investors to get good advice from reputable brokers and keep to well-defined objectives.



Member Firms Hold Special Premieres

To launch the Exchange's new film, member firms across the country have held a series of special events. In St. Louis, brokerage companies had a three-day event in cooperation with a local department store. In Rochester, N. Y., member firms rented the city's new shopping center mall to provide free shows of the film for a three-day period. In New Orleans, Washington, Chicago, Atlanta, Dallas, Buffalo, Detroit, Minneapolis, Santa Barbara and Tampa, members of the Exchange held premieres in cooperation with local television stations. In all, some 50 cities across the country had special events to launch the new film.

In addition to club audiences and television, the New York Stock Exchange has a built-in audience of which few other institutions can boast. 600,000 visitors every year come to watch the Exchange trading floor in action. It (CONCLUDED ON THE FOLLOWING PAGE)

Lunch counter tip: *Jim Backus (left) assures Eddie Bracken that "this deal can't miss."*

Eddie admits he's worried *about that "tip," asks Jim to let him have his money back.*

Eddie won't listen to *Janet Blair (right) when she tells him to visit their broker.*

N.Y. Stock Exchange:

(CONT'D FROM PREVIOUS PAGE) is a major New York attraction. Most of these visitors stop at the 74-seat theater in the Exhibit Hall where *The Lady and the Stock Exchange* is featured this year.

Exchange officials believe there is a real lack of economic education in our schools. They believe it is important to the long-range interests of the nation that people should understand the workings of our capitalistic society — how capital is formed and how it is used. Films can play an important role.

Prints of the new film are available from any Exchange member. 16mm audiences are served by Modern Talking Picture Service; television stations are serviced by Sterling Movies U. S. A. Over 600 prints are in circulation.

An Appetizing Entree for Theatergoers

Campbell Entertains With Tuneful "Ballad of Soup du Jour"

SPONSOR: Campbell Soup Company.

TITLE: *The Ballad of Soup du Jour*, 13½ minutes (35mm); produced by The Jam Handy Organization.

☆ Theater audiences throughout the land are reviewing the entertaining history of that long-standing first course: soup.

That's certainly appropriate to the sponsor's well-known line of products but there's a lot of fun and very little Campbell in this film's 13½-minute color reel. It opens on a charming note as a balladier recalls songs about food and doesn't forget the soup. A narrator picks up the history of this dish over some entertaining animated and live-action sequences which show the preparation and serving of soup from the beginning of recorded history. Contrary to modern Russian history books, the Egyptians, then the Persians and the Greeks played merry tunes with their soup spoons a few centuries B. K. (pre-Khruschev).

And there were happy times around the soup bowls of Roman and early Norman eaters. Scenes swing the viewer through elegant Elizabethan England and take him (and her) into early America.

Today's housewife can take care

The legends of soup are recalled in song from history's pages . . .

of the dozen other jobs she holds around the home, from cooking to washing, but she can get along without a chef for the soup course. There are, you know, oodles of noodles and tons of luscious tomatoes in the wide range of nutritious and flavorful soups along the supermarket shelves. Cook 'em straight and serve 'em hot or use them as ingredients for a myriad of other dishes.

The Ballad of Soup du Jour was an award winner at this year's Columbus Film Festival. It is also being made available in non-theatrical version. Write the Distribution Department, The Jam Handy Organization, 2821 E. Grand Boulevard, Detroit 11, Michigan for a booking.

Colorful animation visualizes early cookery in this "Ballad" scene.

Air Tour of Fabulous Bonanzaland, U.S.A.

Enticing Bonanza Airlines Film Is Previewed by Mary Hoyt

. . . This is a love letter to a sponsor from a displaced Westerner. Dear Bonanza Airlines, stop the world, I want to get on—your next flight back to my glorious, glamorous, gutsy, God-given part of the world which you have just filmed so beautifully in *Bonanzaland, U. S. A.* You are right. It's got everything.

For your information, pardners, the center of Bonanzaland territory is someplace near Las Vegas, Nevada. But it spreads out all over the four Western states of California, Utah, Nevada, and Arizona. Within its boundaries are the most heavenly mountains, deserts, oceans, lakes, and valleys on earth. Like a fickle woman, this land is abruptly gay and giddy, elegant and serene.

A Mecca for Tourists

Of course Bonanzaland has been there a long time and has a lot of history. But now vacationers from all over the world are discovering the area for fun and relaxation. New business is booming. The weather's fabulous. And the pace is easy.

Happily, the generous endowments of this part of the country have been faithfully presented in Bonanza Airline's new film, produced by Washington Video Productions, Inc. of Washington, D. C.

It has, in addition, surprise in store for those who realize that public relations and travel films which attempt to cover areas of great contrast are often disappointing to the viewer. Sudden shifts in locale, hasty dissolves, meaningless pans of far-off vistas, and TOO MUCH TALK tend to confuse and distract.

Bonanzaland U. S. A. avoids these pitfalls with superior camera work and tight editing which satisfies the viewer throughout 28 very short minutes.

So fasten your belts please.

Incredible as it may seem, one $90 plane ticket will take a Bonanza passenger any place in any of the four states, as often as desired, over a fifteen day period.

Close-Ups from the Air

Throughout *Bonanzaland, U. S. A.*, a black, white, and orange F27 airplane carries the viewer close in over the natural and manmade phenomena of the old Southwest. The Hoover and Glen Canyon Dams, for instance, can only be fully appreciated in perspective with their spectacular, rugged setting. Salt Lake City's magnificent Mormon Tabernacle and the great sprawling Grand Canyon lie in this land, too; both are simple and awe-inspiring and this motion picture brings out their analogous power.

Conversely, with an utterly refreshing twist, producer George F. Johnston shot the mining town of Virginia City, not as it is today but as it might have been in the past. By miraculously eliminating the hundreds of tourists who daily swarm through the old ghost town and by letting the camera wander slowly through graveyard, saloon, and gold mine, haunting images of the old west are brought to mind.

In perhaps the most absorbing sequence in the film, a "sensitive" camera dollies through Virginia City's empty opera house with its tired old bent-wood chairs, its frayed posters, and its stage that is sagged and splintered; the music is plaintive and sad; the interpretation is captivating.

Name It and You'll See!

Disneyland, Marineland, La Jolla, and San Diego. Bull fighting in Tijuana, horse racing in Caliente. Palm Springs, the "diamond of the desert." You name it Bonanzaland has got it. And it has all been wrapped up in this gay, swinging motion picture which should attract just about everybody of every age.

Glen Johnston, Jim Norling, and Buddy Reed were on camera, shooting out of airplanes, through water, at dusk, from inside to outside, and on the backs of donkeys. Their excellent work was carefully edited by Robert H. Johnson, who kept the trip on track all the way. Felix Grant of WMAL narrated the script by Coe-Peacock, and George F. Johnston directed.

. . . Take-off time in Bonanzaland!

THE INDUSTRY FILM JOURNAL

National News-Letter of the Industry Film Producers Association

Dr. John Tyo, *newly-appointed Audio-Visual Advisor to the Ministry of Information in Nigeria.*

John Tyo Named Advisor to Nigeria; Resigns as Treasurer

☆ The Executive Board regrets to announce the resignation of Dr. John H. Tyo from the office of National Treasurer, IFPA. Dr. Tyo's action was made necessary by his upcoming overseas assignment as Advisor, Audio Visual Communication for the Ministry of Information, Nigeria.

Dr. Tyo, working through the U. S. State Department Agency for International Development, will make his headquarters in Ibadan, Nigeria, where he will be advising the Nigerian Ministry of Information on the production of instructional materials to be used in their agricultural adult education program. The program includes the use of cross-media.

During the past six years Dr. Tyo has held the position of head of motion picture production for System Development Corporation, Santa Monica. He is taking leave from this position for his two-year assignment in Africa. Dr. Tyo came to industry film production from the faculty of Indiana University where he was both teaching and producing educational motion pictures.

To Contact Our New England Chapter, Here's the Address!

☆ Want to sit in on a meeting of the New England chapter? You can contact the secretary or program chairman with a line to P. O. Box 150, Bedford, Mass. and they will send you data on the next meeting time and place.

IFPA's New President Calls Need to Build Truly Active Membership a Primary Goal

by H. Eugene Burson, Jr., President, IFPA

THE TRADITIONAL THING for a new president to do is publish an opening statement to the membership. But, let's level with each other. We've both read our past president's report on last year's progress. We've both read this year's former president's prediction for the year to come. I respect both these men and am in complete agreement with both. A very easy way out (for me) would be to condense and combine these two articles. But, I respect you, too. We'd just be spinning our wheels to go over that information again and, to be frank, there's no time to waste.

I'll get right to the point, there is one secret to continuing the progress of last year, and achieving the goals outlined for this year. Members . . . . lots of 'em. I mean the ones we don't hear much about — the common, ordinary, *essential*, dues-paying member.

Too Busy to Contribute?

I've been pushing membership lately and a couple of times, I've run into this reaction, "I'm just loaded with other activities and I won't join a group when I can't contribute time to it."

Let me puncture that popular balloon right now. I've made a career of joining and every organization I've belonged to would have folded if only those who put in time were members.

They Also Serve . . . Who . . .

Let's look in our own back yard. Take it from an old joiner, IFPA has a higher percentage of time-contributing members than most groups. But we all realize that it wouldn't be the IFPA we know if only that small percentage were members. So, you, ordinary, dues paying member, out there, congratulations, you're doing a fine job, keep up the good work.

Want a hot tip on how to get more out of IFPA than many members do? *Ask for a job.* Feel a little weak on budgeting and the financial end of movies? Offer your help to your chapter treasurer, you'll learn a lot. Want to find out what film services are available in your community and which is best? Help the program chairman. No treasurer and program chairman because there's no chapter in your area? Organize one and get some extra managerial experience. Just the camraderie of a small committee meeting lends itself to the exchange of trade secrets.

H. Eugene Burson, *President Industry Film Producers Assn.*

The Rewards of Belonging

There is literally nothing you can do for IFPA that won't make you a better film man and more valuable to your employer. So, no matter what they say, be selfish about it. Volunteer for a job in IFPA.

In closing let me say, if you want to be an officer or committee chairman, *Welcome!* If you want to be a committee member, *Welcome!* If you want to be that essential dues paying member, Welcome . . . . and bring a friend.

* * *

Entry Deadline is March 15th for the Annual IFPA Awards!

☆ Entry blanks are now available for the Industry Film Producers Association's Fourth Annual Film Awards Competition. To be eligible, films must have been released during 1962, must have been produced by an "in house" business, industrial, government or educational film production organization and must be submitted for entry by an Active IFPA member in good standing.

Films may be entered in any one of six categories: 1. Public Information; 2. Technical Information; 3. Sales Promotion; 4. Training; 5. Orientation and Indoctrination; and 6. Out-Plant Productions.

The deadline for the 1963 Awards is March 15, 1962. Screening of entries will be carried out by committees of IFPA members, sustaining members and representatives from producing companies, motion picture service organizations, and the press. Pre-screening will be handled by the five IFPA chapters.

The two finalists in each category will be voted on by the membership at this year's National Conference, to be held at the Ambassador Hotel in Los Angeles, on June 13, 14 and 15th. Awarding of the "Cindy" and "Finalist" honors will take place on the evening of June 15th. This is the night of IFPA's Annual Awards Banquet, concluding the 1963 Conference agenda.

All those interested in entering films are invited to contact IFPA Chapters' Vice-President Anthony Gorsline, c/o Management Systems Corporation, 2043 Westcliff Drive, Newport Beach, California.

Send Chapter News, Features to Our Editor "Pat" Patterson

☆ If you have a news item or a feature idea for the JOURNAL, remember to send it along to "Pat" Patterson, Head, Academic Communications Facility, UCLA, Los Angeles 24, California.

Prize Film Collection

Good Selection of "Cindy" Winners on Hand for Review

☆ The response to IFPA's request for prints of "Cindy" award-winning films has been excellent. A good selection of films representative of the work of IFPA film producers during 1961 is now available to Regional Chapters.

Since its recent inception, the library has already been increased by the addition of *In Your Hands* which was produced by the Education and Training Department of United Airlines.

Other prints to be added to the library include: *The Aerojet-General Corporation Interior Computer Program*, produced by the Aerojet-General Corporation; *Photography in the USAF — Optical Instrumentation at Vandenberg Air Force Base*, produced by the Air Photographic & Charting Service (MATS) 1352d Photo Group, Lookout Mountain Air Force Station, Hollywood, California; *Principles of Reliability*, produced by the Martin Company; and *The Persuasive Push*, produced for Electro-Optical Systems, Inc. by Technical Communications, Inc.

Chapter Program Chairmen may obtain films from the library by addressing their inquiries to Robert J. Gunther, Chairman, IFPA Film Library Committee, 11182 Fairbanks Way, Culver City, California.

Members Attend Session on Special Effects

Southern California Chapter Visits Cinema Research for Talk and Demonstration of Aerial Image Printer

A REVEALING MEASURE of the growth and stature of industry film production is the extent to which the motion picture service organizations have improved and adapted their processes and techniques to accommodate the special demands of this emerging profession.

This was dramatically demonstrated in a recent meeting planned by Southern California Program Chairman Brent Inman, held at the special effects laboratories of the Cinema Research Corporation, Hollywood.

Limitations of the Past

Historically, the 16mm producer has been denied many of the resources of the special effects artist. This was due not only to the inherent limitations of early 16mm, but also to its previous lack of professional status.

Only in recent years has the 16mm medium grown both technologically and economically to the point where it now demands a level of supportive service equal to that which was previously confined to 35mm production.

Scheib a Pioneer in Field

Mr. Hal Scheib, President of Cinema Research, a pioneer in developing special effects services for the 16mm producer, hosted the meeting. He described the efforts made over the past 10 years to overcome the limitations of the traveling matte in 16mm work.

The aerial image process, Scheib explained, provided the breakthrough, and is now providing the 16mm producer a complete selection of effects previously enjoyed only by the 35mm producer.

The aerial image printer, a complex device incorporating the features of both optical printing and bi-pack matte printing, was thoroughly demonstrated by Mr. Scheib and his associates. A sample reel of aerial image effects was screened and analyzed.

With this new capability of special effects in 16mm, the role of the special effects laboratory in the field of industry film production was explained by Mr. Scheib. The special effects technician now becomes part of the production team, offering his assistance during the scripting stage as well as during production.

Got a Story for the Journal?

☆ Your film anecdote, a piece about the new picture or a good new utilization idea are all welcome fare for these JOURNAL pages! All you have to do is send it in.

Scene from one of the five short films in the "Safeteam" series.

When shop safety fails, the result is bound to look like this.

Bucyrus-Erie Workers Join the "Safeteam"

Plant Theaters, Incentive Awards Used in Safety Campaign

IT'S ALL-OUT WAR on shop accidents in the plants of the Bucyrus-Erie Company. This maker of heavy machinery has maintained a good industrial accident record and means to keep it that way!

Designed to remind B/E workmen of basic safety principles and to keep the subject constantly before them, the Company has a new series of five color cartoons, each running five minutes, and they're uniquely tied-in to a "Safeteam" program that involves posters, safety incentive awards and four "Safeteam" theaters that will operate by push-button adjacent to plant production lines.

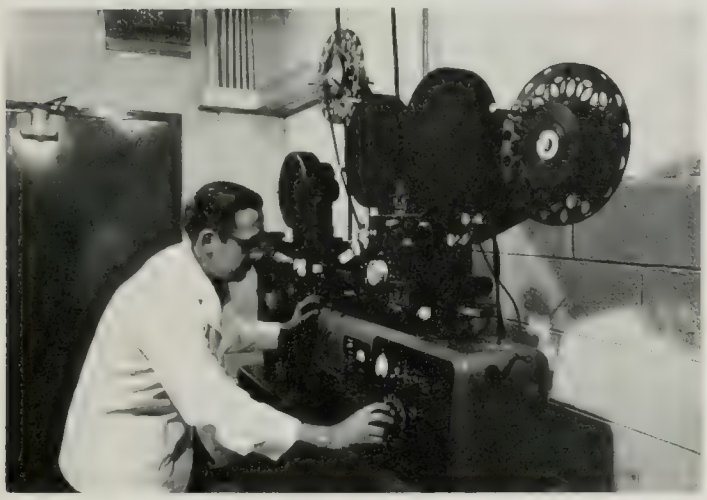
Five Titles in the Series

The films present lifting (*Let Your Cranes Do the Lifting*); avoiding cuts (*Cutting Out the Cuts*); eye protection (*Foresight Beats No Sight*); lift truck safety (*The Passing of a Lift-Truck*); and avoiding job short-cuts (*Shun the Short Cuts*). Their principal characters are Dopey Dan and Safety Stan.

An example of integrated service was set when Wilding, Inc. created the film series; its subsidiary, Dramaturgy, Inc. designed and built the 16mm theaters with their marquees. Finally, a Wilding "associate," the E. F. MacDonald Company is providing incentive prizes from a special catalog for company employees.

Picture Shown Each Week

Four theaters are set up in a B/E plant for five weeks; workers just push the button to watch the films. There's a matching poster for each title. After viewing, the employee fills out a "qualifying card" from a box at side of theater. Three questions are "weighted" for points toward the prizes. Best answers and a matching shop safety record scores. After the five-week "run" the theaters and campaign moves on to another B/E plant.



The basic program is simple, easy-to-run and extremely stimulating with its weekly changes and the "game" principle involved in the incentive awards.

The "Safeteam" series was scripted by Wilding's Hal Secor; art was under the direction of Tom Murphy of Wilding, Detroit. The campaign should play a key role in B/E safety statistics.

One of four "Safeteam" theaters *designed and built by Dramaturgy, Inc. for push-button operation by workmen at Bucyrus-Erie plants.*

DESIGNED TO SERVE A GROWTH INDUSTRY

Plant Premiere: New Capital Film Lab Building Makes a Debut in Washington

ONE OF THE HANDSOMEST modern buildings on the horizon of Washington's burgeoning Southwest Redevelopment Area is the new home of Capital Film Laboratories, Inc. Custom-built to meet the increasingly sophisticated film industry, Capital now offers rapid, diverse services to clients in all parts of the United States.

Within its 27,000 square feet of ultra-contemporary space, futurized equipment, manned by 110 experienced employees will process and print approximately 100 million feet of 16, 35, and 35-32 film each year.

Work of a Noted Architect

The facilities include two beautiful review and re-recording rooms, built with a common back-to-back projection room and equipment for cinemascope. Motion picture screens in both of these areas have been ingeniously constructed so that the edges of the picture blend into soft neutral walls and ceilings; Ben Schlanger, who designed the auditorium at Purdue University and the Vista Vision Theater in Williamsburg, is responsible for this "peripheral viewing."

Latest Bell & Howell Additive Color Printer *is automated by punch tape which controls the scene-by-scene color and density correction.*

Nearby, in the same section of the new grey and white brick plan a pre-fabricated, ideally accoust cal, soundproof room has bee built to allow 40 decibel isolatio for sound narration with no e traneous noise whatsoever.

35 32mm Eastman Color processi machine, *photographed during i stallation in Capital's new buildin*

Custom-Built Film Machines

A 16mm negative-positive m chine — Capital's own design – has been constructed on the pren ises. And in the color departmen there is a Hollywood-built 35-3 neg pos Eastman color processi tank, reportedly the largest in th country.

"Sensing equipment" has bee installed throughout the plant ar personnel in a quality control roo monitor such things as: solutio temperature, replenisher rat pH. factor, and other necessa sensitometric information.

In addition to music, cuttin and editorial rooms, a Telenev suite has been set up for receivin shipping, and cutting hot new from the nation's capital.

Although not completely finis ed yet, Capital Film Laboratorie which was incorporated in 195 is operating in high gear. The ne plant should be nationally attra tive to quality-minded clients wh are looking for varied, but tailo made, services.

In the pictures (*at left, top to bottom*): *front elevation of the new Capit Labs' building; next, specially-constructed Acme Printer for color or b/ intermediate materials; Capital's new chemical lab for analysis of phot graphic solutions;* (*bottom*) *chemical mix room where pre-weighed chemica are fed to the mixing hopper in which they are carried by metered hig pressure stream of water to the mixing tanks.*

They're Talking FILM in West Germany

echniques, Festival Judging Problems and an Executive A-V Workshop Share Spotlight

As Reported by Robinson P. Rigg
European Editor of Business Screen

EVER SINCE the 3rd International Industrial Film Festival in Berlin last fall, the German A-V world has buzzed with comment, opinion and ideas about industrial films and festivals.

Paul Zils, producer of the prize-winning film *Fantasie und Gestaltung* (*Fantasy of Shapes*), is reported in FILMBLATTER as saying that he owes the success of the film (which shows school leavers that there are opportunities for creativity in employment today) to his 15 years of experience in documentary film production in India coupled with an interest in all films, good and bad.

"The secret is to make the industrial worker, not the machine, the focal point of the film. I learned this from the English industrial film makers," says Zils.

* * *

Judging at International Film Festivals Draws Sharp Comment from German Jury

The judging system of the International Film Festivals came in for some sharp comment from the German members of the Berlin jury.

Will Riesenberg, jury president, said that the new points system for assessing the winner of the Grand Prix had worked very satisfactorily, but the jury found great confusion when putting the films into their correct categories. He hoped that in Madrid the categories would be very clearly defined.

Heinz Pieroth, a member of the jury, was more outspoken; he said that several films which should have won prizes were, in fact, not considered because they had been entered in unsuitable categories. He was in favour of an open competition without categories, but with full explanations of the purposes of the films and that juries could judge their effectiveness.

Peter Nickel of DEMAG, speaking at a Film Conference in Essen, recommended that members of festival juries should include:

a) engineers or subject specialists to judge technical points;
b) film producers or technicians to evaluate production qualities;
c) journalists to judge the commentary or scenario; and
d) a public relations or advertising man to judge the overall impression of the film.

* * *

50 Executives from Ruhr Companies at Conference on Industrial Film Technique

Over 200 executives from Germany's Ruhr industrial area attended a one-day conference in Essen to discuss current developments in industrial film technique.

Speakers included Dr. Hugo Ritter of the German Federation of Industries, who opened the conference, Peter Nickel of DEMAG and Hans Campen, Krupp Public Relations Officer, who emphasized the need to integrate music into a film so that the picture, movement and sound became as one — if music was to play its real part in stirring the emotions and setting the mood of a film.

Dr. Wilhelm Packenius of BASF said that the growth of the industrial film movement in Germany had been slow by comparison with the United States and other countries because of smaller firms' lack of experience. Films need not be confined to subjects like the company's 100th Anniversary or some great social or industrial achievement.

"But whatever the subject or reason for a film it was of no value at all unless it was brought to the audiences," said Dr. Packenius.

Dr. Hans Schaller (AEG) said that there was no such thing as a "ready-made" film. Each film should be specially designed for its subject and the cost should be related to the value of the publicity it should attract.

Dr. Klaus Brepohl recommended that German industry should spend more time studying the needs and tastes of audiences, before they approved any film treatment.

After a discussion which centered around film costs, the delegates viewed a selection of prize-winning films which included *Entspanntes Wasser* (Henkel) *Campo Limpo* (Krupp), *Remington Eleven* (Remington Rand), *Spiel in Farben* (BASF), and *Kahl* (AEG).

News of Films from Britain

Britain's Film Technicians Ask Equal Rates for Theatrical, Factual Films

☆ The British film technicians' union, the Association of Cinema and TV Technicians, want to be reimbursed by the Association of Specialised Film Producers on the same terms as those of the British Film Producers' Association who produce theatrical features.

The "problem" is that the Specialised Producers pay lower wages and use smaller crews on their industrial films than the British Film Producers Association members do on their entertainment features.

The union claims one rate for the job whether it is on industrial or entertainment films; they say that filmstock manufacturers, studio proprietors, equipment rentals, etc., charge the same, irrespective, so why should the technicians get less?

There are 1,400 technicians employed by the Association of Specialised Film Producers, 1,200 technicians on the books (but not necessarily in employment) of the British Film Producers Association, and over 1,000 technicians, not members of the union, who are employed directly by British industry, government and nationalised organizations.

Typical basic weekly wages are: Head Cameraman now at $78, asking for $150; Assistant Director $40, asking for $60. Present crew for a 16mm film shot on location with mute camera is four technicians.

The union is asking that this should be increased to eight to include 1 Exterior Cameraman ($110), 1 Camera Operator ($80), 1 Follow-Focus ($50), 1 Clappers ($36), 1 Director ($90), 1 Assistant Director ($60), 1 Continuity ($54), and 1 Production Secretary ($36).

Producers say the increased weekly wage bill for camera crews on simple 16mm films would be in the region of $300, more than industrial sponsors would stand for.

Specialised film producers employ technicians on yearly contracts. Many have given notice that they could not be renewed if the wage and conditions of service claims are accepted.

News Theater Circuit Audiences Applaud Good Sponsored Films, Says Booking Chief

☆ Bob Morgan, booking manager for Classic Cinemas, Britain's largest art and news theater circuit, in an interview with BUSINESS SCREEN INTERNATIONAL stated that industrial sponsored films formed a valuable part of his programmes.

"Films like British Oxygen's *O for Oxygen* have been applauded by audiences in our cinemas this year and we are delighted to show good industrial 'shorts' because the public like them. Our managers like them too as they can tie in lobby displays and local press publicity.

"Ford's *Classic Holiday*, a beautiful movie about a motor holiday in Greece, is just completing a six-months' run in the circuit's cinemas and Ford has offered a prize for the most imaginative and attractive lobby display — Ford dealers have been most co-operative in advertising the film when it played our cinemas."

Bob went on to say that other films which played his circuit this year were British Nylon Spinners' *British Nylon in Fashion*, a preview of the latest fashions in nylon fabrics (produced by Film Partnership), *Newspaper Run*, a B. P. film produced by Rayant Films, which describes newspaper deliveries in Lapland, Dunlop Rubber's *Made for Travel* which deals with tyre care in a lighthearted way.

At press time, Bob was viewing Ford's new cartoon film, *The Ever Changing Motor Car*,

(CONTINUED FROM THE PRECEDING PAGE)

National Benzole's *The Faithful Carrier*, and Britax's *The Other Fellow*.

Producers and sponsors who wish their films to be considered for showing on the Classic circuit should contact BUSINESS SCREEN's London office at 139a Bedford Court Mansions, London W.C.1.

Films from all over the world can be accepted; but they must be available in 35mm although a 16mm review copy is necessary in the first place.

World Wide Pictures Limited Appoints Kentish and Parris to Board of Directors

Douglas Kentish and Clifford Parris have been appointed to the Board of Directors of World Wide Pictures Limited, the London production unit for industrial films and TV commercials. These are the first appointments to the World Wide board in 16 years.

The former President of World Wide's Television subsidiary, Douglas Kentish has been the Executive Producer of television and cinema commercials and has 1,200 such films to his credit.

Clifford Parris joined World Wide straight from school in 1946 and had been editor, writer and film director before he became a producer of industrial films. Recent film sponsors include the British Government and Defense Services, the Atomic Energy Authority, W. D. and H. O. Wills cigarette manufacturers, and Bowater paper group.

At right: *Douglas Kentish, elected to the Board of World Wide Pictures.*

* * *

Below: *Clifford Parris, also joins Board, has been on staff 16 years.*

Arthur Watkins Retires as President of the British Film Producers Association

His many friends throughout the world will be sorry to hear that Arthur Watkins has retired from the presidency of the British Film Producers Association after 15 years. In his message of farewell, Watkins stated that he would be succeeded by Mr. Robert Clark.

* * *

Baker Perkins Films Exhibition Display to Help Market Laundry Equipment Worldwide

At first, it may seem strange to use a motion picture to cover a subject as static as an exhibit. But the International Laundry and Dry Cleaning Exhibition at Olympic, London, was the subject of *Setting the Pace*, a seven-minute 16mm color film. The booth of Baker Perkins Jaxons Limited is its stellar attraction.

The film was made by Baker Perkins in-plant unit with export markets very much in mind — in fact the first copy was shown in New Zealand within six weeks of shooting and other prints have been set to Australia, Canada and South Africa.

The exhibition takes place every four years. *Setting the Pace* used a direct, newsy treatment aimed at capturing the exhibition mood and at the same time drawing attention to the latest plant and methods. This helps the company's salesmen who can supply the technical details. People seen in the film are actual operators of the model laundry which formed part of the Baker Perkins display. We meet their salesmen and customers, seeing and hearing first-hand reactions. At low cost, *Setting the Pace* will help keep the 1962 exhibit alive until 1966.

* * *

Face-Lifting of Old Towns is Theme of Windsor Story in "New Face for Britain"

☆ Many of Britain's old towns are getting a "face lift" and Chambers of Commerce, civic societies and local chapters of architects are hard at work to see how they can make their towns more cheerful and dignified at comparatively little cost. Behind this movement is the Civic Trust, a non-profit organization set up to advise and publicize local face-lifting efforts.

Not long ago Windsor, a little town that clusters around the walls of 1,000-year-old Windsor Castle (one of Queen Elizabeth's official residences), had it's face lifted and the Civil Trust sponsored *New Face for Britain*, produced by World Wide Pictures, to tell the story. Narration is by the Right Honorable Duncan Sandys, British Minister for Commonwealth Relations and the Colonies and one-time Minister of Housing and Local Government.

As the narrator says — the aim of the Civic Trust scheme is "to preserve what is beautiful from the past and to add to it something which future generations will think is worth preserving." This 17-minute color film is a valuable record of community development set against the background of an age-old castle. Write our London office for print details.

Film Events on the Continen

Joop Geesink's "Dollywood" to Combine Talents With Productions Jean Riberprey

☆ The recent agreement between Jo Geesink's Dollywood (famed Dutch animat puppet film producer) and Productions Je Riberprey of Paris may bring some exciti developments in the European short film fiel

Joop Geesink's latest puppets are made paper and in every film they become mo like real people . . . they sell, too. Chevrolet will attest as a successful us among international advertisers.

Jean Duclos of Productions Jean Riberpre who will be associated in the new joint ventu is hard at work on a documentary for t French Electricity Authority and the Ele tricity Authority of the Ivory Coast in Afric *Le Grand Mur* (*The Big Wall*) is a fine e ample of a film about the effect of mode technology on the up-country African. centers around charming 16-year-old Karic Aka Brou, a self-possessed young lady fr Agnibilekrou (not far from Ghana's weste boundary) who views the building of a gia dam on the Bia River as just one of thc things.

The film was started last May and is bei shot in 35mm Eastmancolor. Completion da will be after the inauguration of the dam 1964. Meanwhile we can see another fil about the Ivory Coast Republic — *Caroli et le Barrage* — which Jean completed l year.

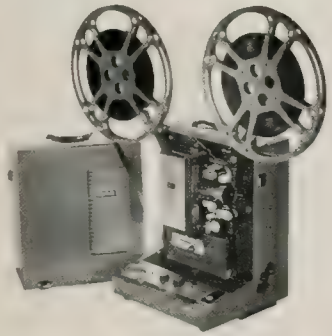
Les Analyses Cinematographiques Remak Borden & Busse Film Version for Dartm

☆ Georges Roze, president of Les Analys Cinematographiques, one of France's leadi industrial film producers, tells me that he h just completed a remake of the Dartnell/Bo den and Busse film, *How to make an Effecti Sales Presentation*, at the Eclair Studio in Ep nay, near Paris.



Georges has been making French versions Dartnell films for over six years. His fir

(CONTINUED ON THE FOLLOWING PAGE 48

Inflight Motion Pictures, Inc. needed a reliable 16mm projector for TWA, that would run without any operator at all

y got it, using Kodak Pageant 16mm pro-
or components.
he projector had to be so automatic and so
pletely reliable that, with the flick of a
ch in a TWA SuperJet plane cockpit, the
w would start, run uninterrupted for as long
½ hours, and then stop.

You can imagine how utterly dependable that projector has to be.

TWA SuperJets have them, showing first-run movies in flight.

Using Kodak Pageant 16mm projector components, Inflight Motion Pictures, Inc., worked with Reevesound Company, Inc., to design this motion-picture system. Except for the "on-off" switch in the plane's cockpit, the equipment is hidden in the plane's ceiling.

The Kodak Pageant components used in this system are the same as those being used reliably in educational and business audio-visual training and sales programs everywhere. The reason is simple: *Kodak Pageant projectors work dependably whenever and wherever you want them to, with neither embarrassment to the operator nor distraction to his audience.*

If you need that kind of movie projector, ask your Kodak A-V dealer to demonstrate the new Kodak Pageant 16mm sound projector, AV-126-TR, shown on the left. Or write for specification Bulletin V3-65.

Leftist Bias Causing U. S. Producers to Lose Interest in Europe's Art Festivals?

☆ Speaking at the recent Mannheim Film Festival, George Wallach of the U. S. Embassy in Germany stated that American producers were losing interest in European entertainment and art film festivals because of the leftist bias of many international juries.

If the Russians showed a war film it was described as "patriotic"; but if an American producer showed the same type of film it was either "war-mongering" or "all lies". He felt that the United States might withdraw from competing in festivals which exhibited this tendency.

The only industrial film favourably reported on at Mannheim was *Alvorado* produced by Walter Niebling for Mannesmann Steel of Germany.

* * *

Germans Encourage Documentary Production With Cash Awards of $140,000 to 28 Films

☆ Under a scheme to encourage the production of documentary and art films, the German Government honored twenty-eight films with cash awards totalling $140,000 in 1962. In 1961 the prize money was $120,000 for 28 films.

The highest single award went to an industrial company, Mannesmann, whose film unit made *Alvorado*, a film about the effect of industrialization in Brazil — the prize was $30,000. Other industrial films honored included *Antonio* produced for Krupp by Porta-Film, and another film about the German expansion in Brazil.

* * *

Carborundum Presents "The Wider View" of Industry, Methods and Machines in Europe

☆ Carborundum's British plant has made an important break-through in films with *The Wider View*. The company's chief producer, Frank Harris, has previously always pictured the company's abrasive products in use by British industry. He is, incidentally, the first in-plant producer ever to receive the British Kinematograph Society's Fellowship honors.

To keep up with the times (and a little ahead), Frank now examines the use of coated abrasives in the heart of the Common Market on the continent of Europe. In *The Wider View* Carborundum cameras tour Germany, Finland, Italy and Denmark to record a wider range of industries, methods and machines, some controversial, some of great interest and some not so up to date.

At the Juwel plant in Hamelin (of "Pied Piper" fame) in Germany, the U. Z. Schleifautomat machine is seen sanding lacquer and polyester; at the Libbey-Owens factory in Gelsenkirchen, glass is ground with abrasive belts; in five other German plants,

Metal finishing scene in "The Wider Vie

Carborundum products are shown in use. T we visit four plants in Italy, three in Fin and two in Denmark — from ski manufac ing to refrigerators.

If you want a quick tour of Europe's dustries, climb aboard Carborundum's can car to get *The Wider View*. Prints shoul available in the U.S. from The Carborun Company, Niagara Falls, N.Y.

* * *

☆ At the fall meeting of MIFED (Mer Internazionale Del Film) the shorts and d mentary and TV film market place in Mi 52 countries offered movies for sale — a t of 1013. There were 555 shoppers from following lands:

Africa (61), Austria (9), Belgium (1 England (10), France (39), Germany (2 Holland (11), Italy (314), Japan (19), S (9), Switzerland (16), United States (2 and Yugoslavia (19).

Other countries offering films for sale cluded Argentina (3), Canada (7), Czecho vakia (6), Ethiopia (7), Greece (4), I (6), Israel (4), Poland (3), Senegal (Sweden (4), and the U.S.S.R. (5).

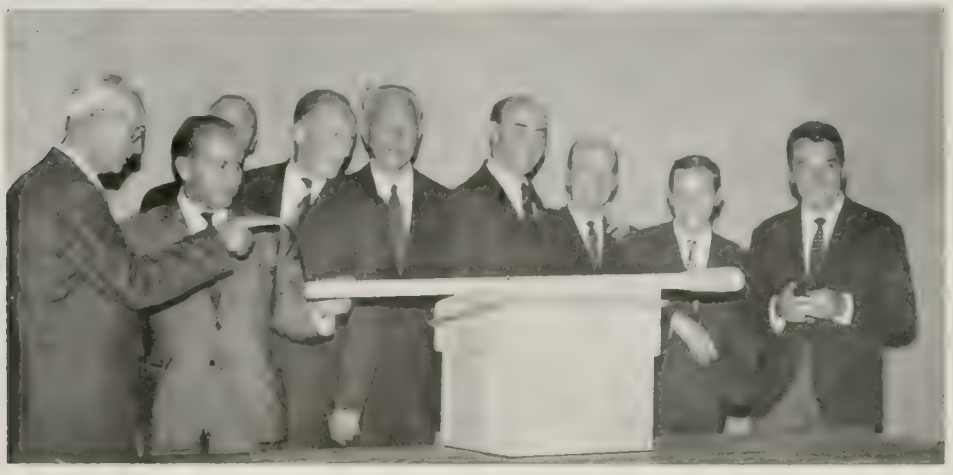
Viewers See What They Want to Believe

☆ Lord Chados, President of Britain's A ciated Electrical Industries Limited tell story for A-V men in his memoirs:



". . . one of the half-holidays granted to Persian Civil Service had been cancelled two educational films substituted. The sec of these depicted a Persian official in his oft and a Western trader enters. A concessio discussed, terms suggested and indignantly fused.

"At this moment the westerner produce bag from which he draws a few gold bars says, 'Will this help to persuade you?' In film the Persian official draws himself up his full height and says haughtily, 'Do know that no Persian official would sell country's interest for gold?'

"At this point the audience of civil serva who had become rather bored, suddenly gr ed that the film was meant to be a comic. greeted the sentence with roars of deligh laughter. Afterwards each appearance of official was the signal for cat-calls. He clearly looked upon as the Charlie Chaplir the Middle East."

Was the film meant to be a comic? Food thought for those who think about their a ences and what they *really* see!

Dartnell's European distributors *examine jumbo match featured in Borden & Busse film, "How to Make an Effective Sales Presentation." Below (l to r): Alvin Busse, Georges Roze, Gordon Fyfe, Kerst Blaauw, Dick Borden, Reg Hodge, Ed Slocum, M. Boetcher, Jean Bacque.*

Screen Advertising

tory of World Association old by Secretary General

IONEL GALE, Secretary General of the new Screen Advertising orld Association, organizers of annual International Advertis- Film Festival in Europe, tells w it was formed:

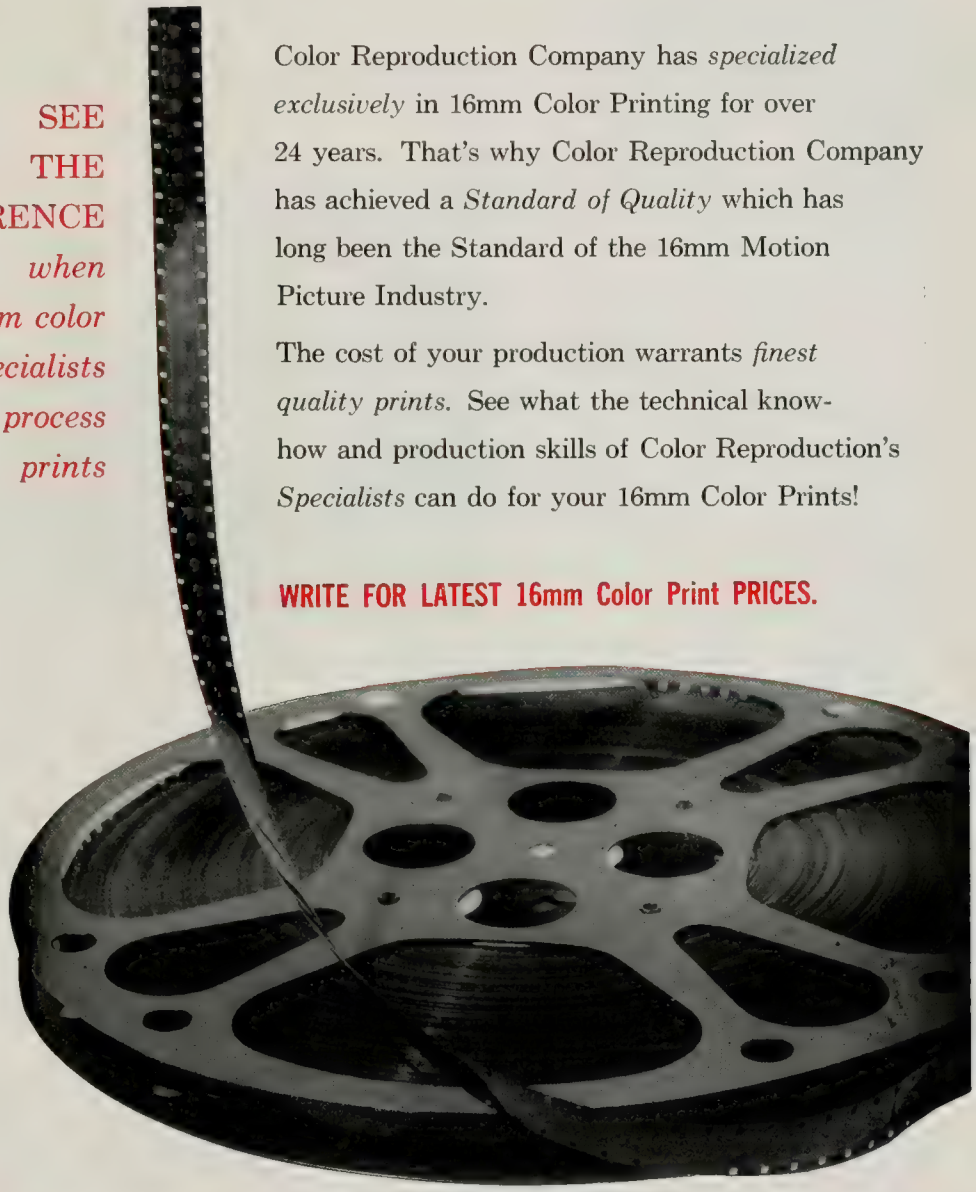
"The International Screen Ad- tising Services (I.S.A.S.) was nded by Ernest Pearl in 1953 d over the years the 5 mem- s of the original group grew to . One of the first tasks that .A.S. set itself was the promo-

Secty. General Lionel Gale

n and organization of an adver- ng film festival so that produc- from all over the world would e each other's work.

The first Festival was held in 54 in Venice and was attended just over 200 delegates who saw rly 200 films. In 1955 the Fes- al was held in Monte Carlo and e support had grown to over 0 delegates who saw nearly 400 ns. It was clear that the Festival s here to stay.

In 1957 when the Festival had own much larger, I.S.A.S. was ned by I.S.P.A. — Internation- Screen Publicity Association — ich had been founded in London 1955 and of which Gale was med General Secretary. I.S.P.A. s the younger and smaller of the o Associations and at the present e has 18 members as compar- with I.S.A.S.'s 27.



Joined by Publicity Group

In 1962 Bill Annett, the Presi- nt of the Screen Advertising As- ciation, President of I.S.P.A. d Fritz Rothchild of Germany, esident of I.S.A.S. met in Venice the 9th International Advertis- g Film Festival — (attended by 00 delegates from 26 countries), d agreed the merger of the two ssociations to form the Screen dvertising World Association AWA).

S.A.W.A. is a powerful body th 43 members from 40 coun-

tries under Ernest Pearl as first President. Charles Ruedie of Switzerland, the founder President of I.S.P.A. is Vice-President. Peter Taylor, who was Director of the Festival since 1956, will continue in this important role.

Holds 10th Festival in June

The 1963 Festival, the 10th in the series, will be in Cannes from 17th June to 22nd June. Nowhere else in the world, in spite of many efforts, has anybody managed to rival the Festival — and the organizers are now obliged to send out over 10,000 invitations each year.

Although the Festival is the most publicized part of the work of the Association it also serves advertisers in many other ways — for instance to adapt films that have been shown in one country for exhibition in another. The consistent spread of information about the political aspects of cinema advertising, public attitude to the medium and trade trends of which advertisers should be aware, have helped build up a considerable file of information at the disposal of members' clients wherever they may be.

Film: the Universal Language

To those who have spent years in the business of international screen advertising, it is no surprise that more than half of the world's population cannot read and the universal message of film is the main medium in many, many important markets."

Fred Niles Co. Observes Seventh Year in Film Business

☆ Fred Niles celebrated his company's seventh year of business on Dec. 12. The company began in 1955 with a group of three — Niles, production vice president Bill Harder and creative vice-president Ruth Ratny — in an office in the old Eighth Street theater, Chicago.

Two months later, on Feb. 12, a staff of 20 moved into its own building. Within three years, the Niles Company outgrew its facilities, topped a two-million-dollar volume, doubled its staff, and was doing business with top midwestern accounts.

Niles bought the Kling film facilities on Washington Boulevard in Chicago and moved into them on Oct. 12, 1958. Today, Niles Communications Centers has three studios — in Hollywood, New York, and Chicago.

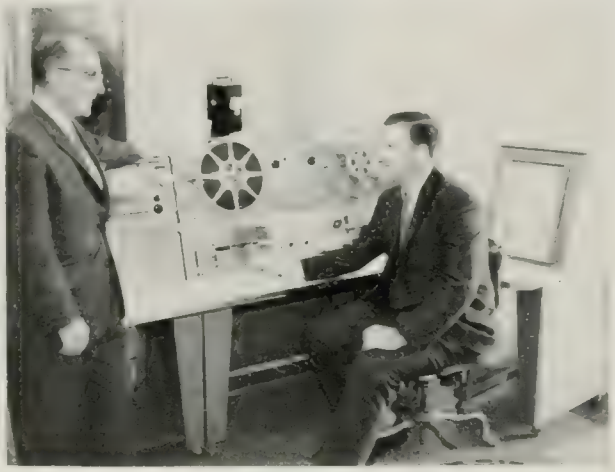
Electronic Inspection Guards Print Quality

Educational TV Center Takes Delivery on New Inspect-O-Film



One of America's leading distributors of films has turned to the latest in electronic film inspection equipment to meet growing print handling needs.

The National Educational Television and Radio Center, Ann Arbor, Michigan, has just acquired a new Mark IV scratch-detecting Inspecto-O-Film machine. Peter Polakowski of NET took delivery on the new equipment from the Harwald Company, Evanston, Ill., last month. NET has also adopted the Harwald Protect-O-Film scratch prevention process.

Now distributing films to over 60 educational TV stations, NET's new Mark IV was designed to Mr. Polakowski's exacting specifications. Harwald's Howard Bowen, Dick Wallace and Sam Caldwell are credited with electronic engineering and design.

The Mark IV electronically records and graphs scratch condition of films while detecting small mechanical defects and cleaning films in two different ways. One is by electronic application of an exact amount of Protect-O-Film solution (putting a hard, slippery, anti-static coating on film) while also removing surface dirt and dust. The inspection area of the Mark IV also has a new slot-loading feature now being adopted in future equipment.

A pioneer in electronic film inspection machines, Harwald now manufactures seven different models; is a major supplier in field.

NET's Peter Polakowski (seated, right) explains features of Mark IV Inspect-O-Film to Business Screen's Ed Lynch.

Atom Research Center Adds Three Science Films to Library

☆ Three new films have been added to the library of scientific motion pictures at Argonne National Laboratory. All films in the library are available to the public without charge.

Introduction to Analog Computers covers familiarization with a typical analog computer, analog computer components, programming, and a solution of typical problems. The lecture film consists of three 40 minute sections, and is designed for classroom presentation.

Balloon-Borne Radiation Spectrometer illustrates development of a balloon-borne radiation spectrometer designed to learn more about the atmospheric movement of radioactive debris and upper air circulation. The film is 7 minutes 45 seconds long.

XeF_4 describes the creation of xenon tetrafluoride by chemists at Argonne, the first successful combination of xenon with one other element. Development of this compound opens up a whole new area for the study of chemical bonding. The film is 5½ minutes long.

Argonne also has available for loan more than 55 other technical and popular level films dealing with scientific, technological and engineering aspects of the atomic energy program. A catalogue may be obtained from the Argonne Film Library.

These films are available for free loan from the Film Center, Technical Publications Dept., Argonne National Laboratory, 9700 South Cass Ave., Argonne, Ill.

Safe Driving is Emphasized in a New Filmstrip Series

☆ Safe driving is stressed in *Tr fic Safety Education*, a new set seven captioned filmstrips, in color, just released by the Soci for Visual Education, Inc., C cago, Illinois.

What makes an expert dri and how to become one are amc the topical problems discussed.

Produced under the combir editorial supervision of SVE a Charles A. Bennett Publish Company, these filmstrips str mature driving habits on the p of high school students and adu studying driver education.

Besides emphasizing safety te niques, important operational p cedures for drivers are clearly plained. Many of the full-co photographs were taken from driver's seat of a car, to give viewer a realistic picture of act traffic conditions.

Each of the filmstrips covers different aspect of traffic saf education. The set of filmstri *Traffic Safety Education*, (7 fu color, captioned filmstrips aver ing 55 frames) is priced at $39.7 Each filmstrip purchased indiv ually is $6.50.

For information, write: SV Dept. 62-27, 1345 West Divers Parkway, Chicago 14, Ill.

New Management Training Film Analyzes Leadership

Styles of Leadership, 16mm, 26 minutes, black & white or color, produced by Roundtable Productions.

☆ This latest management development film in Roundtable's Library, gives a realistic view of problems every manager, regardless of business or industry, faces almost daily.

A few of the typical questions the film goes into are: How does an executive's way of leading others affect morale, motivation and teamwork? How can a supervisor encourage the best performance of his people? What is the right balance between effective control and meaningful involvement of subordinates?

The new training film is designed to aid the instructor who has been trying to stimulate new insights into the various ways managers exercise their authority.

Technical advisors on the film were Dr. John D. Gerletti of the University of Southern California and Dr. Warren Schmidt of U. C. L. A., both authorities in the field of leadership development.

Available — for sale or rental — from Roundtable Productions, 275 S. Beverly Drive, Beverly Hills, California.

Medifilm Report Highlights AMA's 111th Annual Meeting

Medifilm Report IV, a 16mm sound film, 31 minutes, presents highlights of the American Medical Association's 111th annual meeting in Chicago. The film was made available to medical and allied groups by the Schering Corporation.

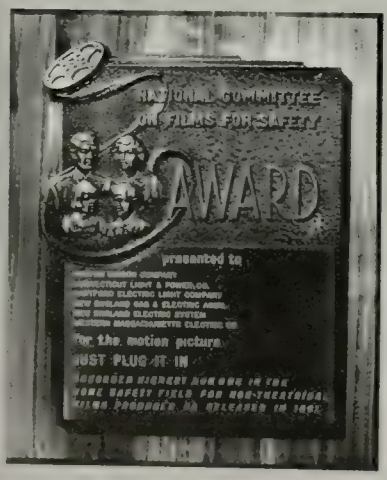
☆ Produced in co-operation with AMA's Department of Medical Motion Pictures and Television, the film features scientific exhibits, lectures, and panel discussions. It is narrated by Jack DeTar, M. D., of Milan, Mich., a past president of the American Academy of General Practice.

State and county medical societies may obtain the film by writing to the American Medical Association, 535 N. Dearborn St., Chicago, or to the Audio-Visual Department, Schering Corporation, Union, N. J.

Topics of special interest are divided into two areas: those for today's practice and those for the medicine of tomorrow.

Subjects for today's practice include:

Inflatable splint for emergency use (Drs. James Gardner and Ted Hartman of the Cleveland Clinic); head injuries (Dr. Joseph P. Evans of Chicago); allergic emergencies in office practice (Dr. John P. McGovern of Houston); alcoholism (Dr. Marvin A. Block of Buffalo); proctosigmoidoscopy for asymptomatic cancer (Dr. Ronald N. Grant of New York City); and teenager's problems (Dr. James C. Walsh of Washington D. C., Henry D. McKay, Chicago sociologist).



Medicine of tomorrow includes: whole organ grafts (Dr. Richard C. Lillehei of Minneapolis); and cancer therapy with thermal neutrons and Boron-10 (Dr. Lee E. Farr of Brookhaven National Laboratory.

Will Function as Sales Training Arm of New York Organization

A NEW DIVISION has been formed at Visualscope, Inc., New York, called Assured Salesmakers, Inc. Headed by Irv Zuckerman, president, and Ray DuFlon, vice-president, the new division will function as the sales training arm of the Visualscope organization.

The chief stock in trade of Assured Salesmakers is a business game called The Salesmaker, which can be likened to a sophisticated parcheesi played with loaded dice. Its object is to make sales training sessions productive, and incidentally, fun.

Game Has Good "Track" Record

The game has had a good record of performance over the past several years, being used by such salesmanship-conscious concerns as National Biscuit, Johnson & Johnson, Westinghouse, Johns Manville, Owens Corning Fiberglas, U. S. Plywood and several dozen others.

The point of gamesmanship for business use, according to Irv Zuckerman, is that people don't really like to learn, because it is too much work, but games can provide the challenge of competition and such actual fun in outwitting the other guy that learning is no longer a chore.

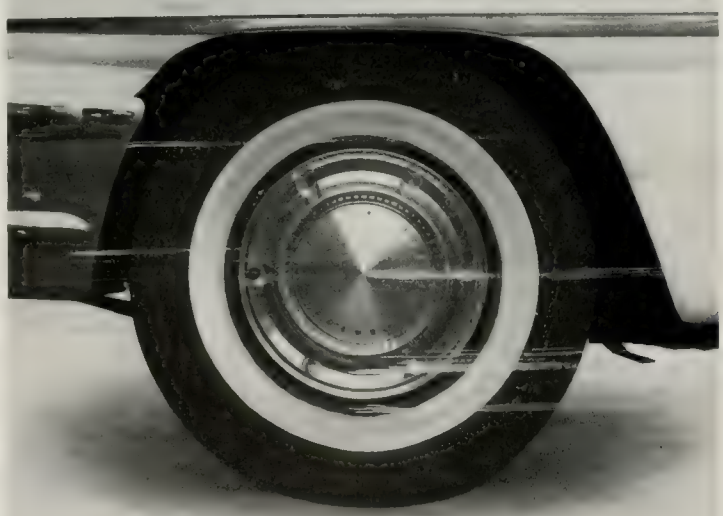
In playing the game, the men are asked to shoot the dice, as in parcheesi, and move across the board encountering red, grey, white and black squares, which are set up to accurately correspond to the emotional picture of typical customers.

For instance, red squares mean hostility and gray areas represent doubt. White squares mean no resistance — an easy sale, while black represents no sale due to some obstacle a salesman can never overcome.

Players, who may range from six to 300 in numbers, are grouped into teams. The idea is that every time a team lands on a red or gray square, it must go to work to overcome specific customer objections for that square, and make the sale to the satisfaction of all the other teams.

Five Advantages Are Noted

Advantages of the game over more traditional sales training techniques are that (1) competition is a strong motivating factor in encouraging men to take a good interest in the session; (2) as a team function, each salesman is assured anonymity — won't just parrot the accepted words from "the book", but use his brains and ingenuity in solving the problem; (3) by listening to the progress of the game, management gets invaluable feedback on actual problems that arise and the salesmen's way of handling them; (4) the game provides a rehearsal time for actually putting new sales techniques in effect; and (5) the game encourages imagination to run free in a sort of brain-storming approach.



Irv Zuckerman points up another value of the Salesmaker game — it provides an immediate reward and an immediate penalty for countering sales objections capably or ineffectively. This is important, for it has been shown that the mind forgets more in the first 36 hours after a meeting than it does in the next 36 days. So the sales techniques that are taught can be put into effect in the game quickly and proved to be effective.

Sales training executives attend a demonstration of Salesmaker game.

Robert Taylor, president of Visualscope, said he was glad to welcome the Assured Salesmaker division to the Visualscope organization because he believed it served to give an added valuable service to the company's clients.

REVIEWING THE SPONSORED PICTURE

Vital Goal in Public Health

TB Testing of Migrant Farm Workers Theme of New Jersey Health Picture

SPONSOR: The New Jersey Department of Health, in cooperation with Lederle Laboratories Division of American Cyanamid Company.

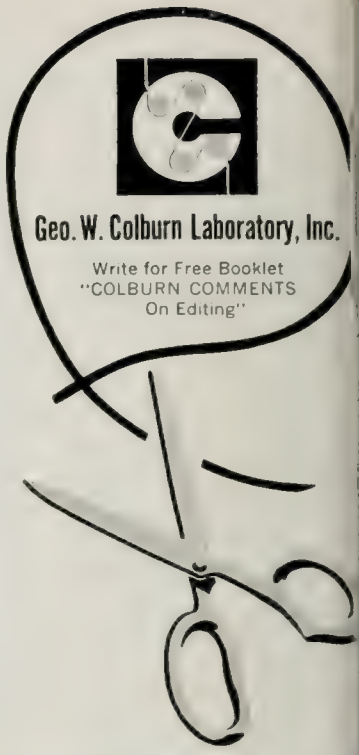
TITLE: *Read My Arm*, 16½ min. color, produced by Harold Mantell, Inc.

☆ The nation's half-million migratory farm workers and their million-and-a-half dependents are a major target of infectious diseases throughout the country, largely because their constant movements between states prevents them from using public health services available to other citizens.

A growing public awareness of this problem has led to considerable activity by the individual states and by the Federal Government. A recent bill (SB 1130) passed by Congress seeks to improve migrant health by providing up to $3,000,000 annually for the next three years to stimulate state and local health programs in migratory worker areas.

Documents the New Tuberculin Tine Test

Indicative of the work that can be done is the recent release of the film *Read My Arm* which documents the first demonstration of a new tuberculosis screening test, the Tuberculin Tine Test, on farm migrants by the New Jersey Health Department's Division of Preventable Diseases.



The Department has sought to demonstrate in the film that (1) local and state public health agencies can provide an answer to the health needs of migratory farm workers by devising new ways of bringing their services directly to migrants in the field; (2) the partnership of employer, church and civic agencies is essential to the development of effective migrant worker care; and (3) that this cooperative process can be applied to control infectious diseases — specifically tuberculosis.

The Key Role of a Good Health Officer

Read My Arm begins with a message from Senator Harrison A. Williams, Jr., N. J., Chairman of the Senate Subcommittee on Migratory Labor. While the film vividly demonstrates the new screening technique which is finding increasing acceptance in TB control, *Read My Arm* depicts something additional. The vigilant concern of a dedicated health officer can strip away the distrust and reveal the human qualities of our "forgotten" citizens, the two million migratory farm workers and their families.

Read My Arm will be of especial interest to nursing groups and TB and health associations. It is restricted to professional and leadership audiences who may be planning tuberculosis screening projects. It may be borrowed from Tuberculosis Education Unit, Public Relations Department, Lederle Laboratories, Pearl River, N. Y.

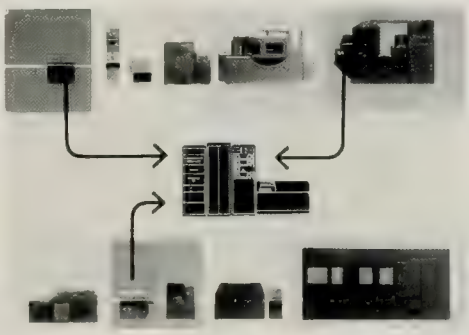
New Role for Automation



Computer-Controlled Production Line Shown in "Tyranny of Large Numbers"

SPONSOR: Western Electric Company

TITLE: *Tyranny of Large Numbers*, 15 min, color, produced by Ted Lowry, associate producer, Pelican Films, Inc.

☆ A survey made by the Western Electric Company several years ago indicated that a big increase was coming in the use of electrical resistors, with a trend toward the deposited carbon type. Also indicated was a severe need for greater reliability in resistors, particularly for military usage.

But making hundreds of thousands of small precision parts of this nature by hand and with conventional machinery is a major problem. Maintaining rigid quality takes as much, or more, time and effort as the actual manufacturing process. Western Electric met this challenge by working out a new automated production line at its plant in Winston Salem, N. C.

Visualization *of Western Electric's computer-controlled process for resistor production.*

First Automated Process of Its Kind

The first of its kind anywhere, the automated production line is a completely computer-controlled process for making deposited carbon resistors. *Tyranny of Large Numbers* documents on film the challenge, the inspiration and the technique which made possible the new method of resistor production.

The film shows the problems involved — in physics, chemistry and electronics — with beautiful close-up shots, eerie photographic effects and music designed to enhance an aura of excitement in activities which are not easy to picture. The production line is seen to perform hundreds of incredibly precise operations with constant quality checks and to immediately correct itself when the slightest deviation from standards occur.

Credits for Design, Script, Direction

Credits for the film go to Ted Lowry at Pelican for overall design, Jeri Sopanen for script, and Lewis W. Bushnell for direction.

Tyranny of Large Numbers was an NVPA award winner and an American entry at the recent Berlin Film Festival. It is being distributed nationwide through facilties of the Bell System companies.

Colorful Show of Flowers

Pictorial Tour of Big New York Show a Visual Delight for Home Gardeners

SPONSOR: International Flower Show

TITLE: *Flowers in Wonderland*, 13½ min, color, produced by Victor Kayfetz Productions.

☆ The more than half a million flowers that fill New York's Coliseum each March are the background for this new promotional film released by the International Flower Show management.

The film pictures the show as seen through eyes of a home gardener and his wife who enter the show competitively for the first time. They marvel at the preparations necessary to put the show together from the confusion of packing crates, balled and burlapped shrubs, potted plants and a thousand other ingredients. They set up their own display of tenderly-cared-for Rex Begonias and then tour the show itself.

One of the highlights of *Flowers in Wonderland* is a special condensed time-lapse sequence of a specimen rhododendron bursting into bloom in less than one minute. This was supplied to the Show by John Nash Ott, of Lake Forest, Ill., a renowned specialist in time-lapse photography. Other special sequences were supplied by Eastman Kodak Company, one of the principal exhibitors in the annual Show.

Flowers in Wonderland is available to civic groups, garden clubs, schools and television stations from The International Flower Show Film Library, 1780 Broadway, New York 19.

Life-Line for Urban Water

100-Mile Pipeline to Oklahoma City

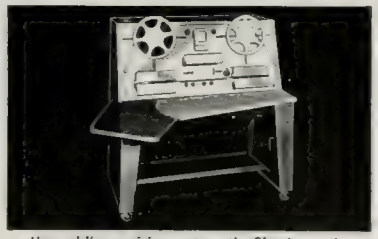
SPONSOR: International Pipe and Ceramics Corporation

TITLE: 100 *Miles to Atoka*, 27 min, b/w, produced by Lewis Studios.

☆ This new film documents a current, and one of the country's most ambitious public works projects. Showing the small army of men and machines which are hastening to complete the longest continuously built water supply system line in the United States, 100 *Miles to Atoka* is a study in ingenuity.

The film shows how a progressive community has planned to meet its vital water needs through the year 1990, and the tremendous task of burrowing to a reservoir at Lake Atoka 100 miles away. By the end of 1963, the finished main will gush 60 million gallons daily of much-needed water to Oklahoma City.

100 *Miles to Atoka* shows huge conglomerations of pipe being lifted into wide trench positions stretching over a variety of different terrain. It also describes the advanced engineering of this program as well as the construction of a nearby plant where the half million feet of pre-stressed concrete pipe is being made.



100 *Miles to Atoka* is being distributed for showings on TV stations by Sterling Movies U.S.A.

Technology of Blue Prints

Modern Methods of Reproduction Are Pictured in "Blue Print for Action"

SPONSOR: International Association of Blue Print and Allied Industries

TITLE: *Blue Print for Action*, 28 min., color, produced by Vision Associates in association with Film Counselors, Inc.

☆ This film provides a contribution to the understanding of the art of graphic reproduction. In presenting the historic events leading to the birth of the industry it demonstrates old methods of duplicating and contrasts them to the high speed precise methods of today.

Blueprinting has become a vital part of today's technology especially where speed and quality of reproduction are important.

Ideas born in the mind of man are effectively translated into a pattern for action through the use of the blue print, and as America moves forward, the blue print industry will move forward with it, the film says.

Prints of *Blue Print for Action* are available to community organizations, colleges, high schools and television stations through Association Films.

A TV Trilogy on Sweden

Three Films on Modern Sweden Show Its Schools, Culture and Industry

SPONSOR: The Swedish Institute

TITLES: *At School in Sweden*, 27 min, produced by Artfilm Studios; *Souvenirs from Sweden*, 27 min, produced by Svensk Filmindustri; and *Made in Sweden*, 27 min, produced by Svensk Filmindustri.

☆ *A School in Sweden* documents the Swedish progressive educational system. It shows children beginning their compulsory schooling at age seven, and views their nine years of academic and on-the-job preparation for a choice of individual careers.

Souvenirs from Sweden describes the country's Viking heritage, its culture, arts, crafts, industries and agriculture. Scenes of Sweden's magnificent forest, sports and colorful terrain are also included.

Made in Sweden portrays the important contributions which Swedish industry has contributed to world trade. The country's timber, ore and hydroelectric power are dramatically seen as major influences of a strong economy. A vast amount of steel, machines and tools, shops, wood pulp and paper products are also viewed.

These half-hour films are available on a free loan basis for showings on U. S. television stations from Sterling Movies U. S. A.

☆ Arriflex Corporation of America announces the availability of an Arriflex-35 motion picture camera with a signal generator and automatic start marker.

The signal generator and automatic start mark combination is available as an original factory installation on a new camera only.

The generator itself, provides a 60 cycle, 1.4 volt output for the control signal. This output is perfectly compatable with all the synchronous sound recording systems

Arri-35 With New Accessories

which use quarter inch tape for the Audio. The marker light system in the camera automatically establishes start marks. Each time the 16 volt, transistorized governor controlled motor is started, the marker lights are energized.

As soon as the camera comes to speed, the lights go out. As a result, two or three frames of film are flashed at the beginning of each take. The end of the flash area is the start mark. Check NP #3 for additional product data.

Instrument Designed to Solve Film Lighting Control Problems

☆ A new instrument designed to solve problems of lighting control faced in live and film television production has been developed by Gamma Scientific, Inc.

The A-500 Luminance Analyzer is the first instrument designed to measure scene luminance ratios. It enables the cinematographer or lighting director to establish white reference quickly and correctly and relate flesh tones and shadow areas as well as all other scene luminances directly to this reference. In general photography, the instrument can also solve light measurement problems for the photographer on difficult or critical assignments.

The hand-held instrument is a photomultiplier spot photometer. With its look angle of ½ degree, it makes possible the measurement of light from 1/4000 of the area of a typical scene.

Measuring 7½ inches long, 2½ inches wide, and 6 inches high, the A-500 Luminance Analyzer weighs three pounds. It is completely self-contained using standard batteries. For other information, check NP #4 in the Request Form.

Portable TV Tape Recorder Unveiled by Ampex Corp.

☆ TV's usefulness as a teaching aid has been advanced with the introduction by Ampex Corporation of a portable television tape recorder one-twentieth the size and one-fourth the cost of previous models.

The Ampex VR-1500 Videotape recorder, descendant of the original Ampex Videotape recorder used by TV broadcasters throughout the world, is specifically designed for closed circuit and off-the-air recording of educational material. It records live action or program material on magnetic tape for immediate or later replay through TV receivers.

Weighing 130 pounds, the VR-1500 operates on household current and has a minimum of controls for easy operation. Check NP #5 in the convenient request form for additional details.

New Multi-Channel Recorder Produced by Magnasync Corp.

☆ A multi-channel recorder/reproducer for audio monitoring is being produced by Magnasync Corporation.

The versatile Magnasync Model TR-1510 multi-channel recording system will record up to 10 simultaneous audio transmissions with continuous around-the-clock operation.

The incoming recorder anticipates the switch-over and the overlap time is adjustable on both transports. The unique Magnasync "fail-safe" feature detects mechanical or electronic failure and automatically starts tandem recorder. No important transmissions are lost.

Plug-in transistorized circuitry provides maximum reliability with minimum maintenance. Check NP #6 for additional product data.

Cummins Announces New Line of Film Marking Perforators

☆ A new line of film marking perforators for use in commercial and industrial film labs is announced by Cummins-Chicago Corp.

Two standard film perforator models are available — one for numbering both types of 35mm film and the other for use on both 16mm and 8mm.

Cummins film marking perforators employ the same basic principle as Cummins canceling equipment used in banks and offices throughout the world. The machines actually perforate holes on the film leader which spell out numbers or letters making positive identification possible at any time, and avoiding any possibility of losing or destroying the identifying mark. Check NP #7 in the request form for additional details.

Portable Sound Lectern Announced by Oravisual Co.

☆ A portable sound amplifier lecternette is being produced by Oravisual Company.

This lectern has a complete high fidelity public address system built into one self-contained portable unit. Compact and easy to handle, it is ideal for use at meetings, conventions, banquets, training sessions — wherever a fine quality, low cost, portable lectern is needed.

It closes up like a suitcase to 10 inches by 19 by 20 inches. Weight is 37 pounds. The eight transistor, 16 watt high fidelity sound system provides unusual power and clarity. Two 8-inch extended range cone-type speakers enable use before large groups, without strain for speakers.

Other features are speaker's timer and signal lights. The adjustable speaker's timer measures silently in minutes up to one hour. Two signal lights remind speakers of the time factor. For complete data, check NP #8 in the Request Form.

Low-Cost Rear Projector Unit Developed by Jack Coffey Co.

☆ A new low-cost rear projection unit has been developed by the Jack C. Coffey Co. so that motion pictures and filmstrips can be

AudioVisual Equipment TradeFair

a Master Vu-Graph; Film Editor, Optical Printer from Abroad

Luxor Rear Projection Unit

shown in lighted classrooms, using equipment many schools already own.

The unit can be placed on one of two same-height projector stands or tables (or one long table or desk) while the projector goes on the other. If the school has two same-height projector stands, no further equipment is needed.

The Luxor Rear Projection unit has a large 18 by 24 inch full screen for sharp screen images. Check NP #9 in the convenient Request Form for more data.

Master Vu-Graph Overhead Projector Unveiled by Beseler

☆ A new, improved Master Vu-Graph overhead projector has been introduced by the Charles Beseler Company.

Sharp, brilliant screen images are projected — even in fully lighted rooms. The unit accepts full size 10 by 10 inch transparencies and projects them as large as 13 by 13 feet.

This is made possible by a precision optical system consisting of a special 4-inch diameter 14-inch focal length f3.5 projection anastigmat, and optically ground and polished 5-inch diameter condenser, special plastic Beseler fresnel lens, and a 1000 watt pre-focus lamp with 4½ inch reflector.

The new Vu-Graph 6600 offers a built-in cellophane roll attachment that will accommodate a 100 foot cellophane or a 50 foot acetate roll. This permits utilization of the Vu-Graph as an "electric blackboard" with user projecting what he writes as he writes it. For additional data, check NP #10 in the Request Form.

Mitchell Adds Vari-Stroke

☆ Vari-Stroke control added to Mitchell NC and BNC film movements allows the camera assistant to time the movement to match variations in the film being used.

The Mitchell Camera Corp. announces that the result is a quieter operating movement, free of picking noise, when transporting film which is not up to standard. This adjustable movement provides the operator with a control over the movement in relation to the film condition. Check NP #11 in the Request Form for complete data.

England's Latest: Motorized Edit-Or Mark II for 16 Film

☆ The Edit-Or Mark II, introduced under the Premier label by Robert Rigby Limited of London, is a new compact motorized editor specially designed for 16mm work.

The main features are that it will handle both optical and magnetic married prints as well as separate picture and either magnetic or optical sound reels. Two sprockets allow easy threading and marking up of picture and sound. Each sprocket is individually declutchable to lift sound or picture.

The large back projection screen shows a picture size 7" x 4" and includes the full width of film — picture and sound track. There is provision for showing picture on an external screen if required.

The one watt amplifier is fully transistorized and includes earphone, socket and volume control. The rotation of a central knob operates the motor — forward or reverse — at either normal projection speed or at double speed.

Motorized Edit—Or Mark II

In either case the machine stops within a frame. The center inching knob can adjust to an individual frame mark. A footage framecounter is fitted.

The unit is mounted on a rugged trolley table with cutting bins and work surfaces. Modular construction is employed throughout for easy maintenance.

Further details may be obtained from Robert Rigby Ltd., Premier Works, Northington Street, London W.C.1. or check NP #12 in the Request Form this month.

A CONVENIENT REQUEST FORM FOR PRODUCT DATA

- ☐ NP # 1: The Thermo-Fax "66" Overhead Projector.
- ☐ NP # 2: New Dual-Unit "Inspect-O-Film."
- ☐ NP # 3: Arriflex "35" Camera With Accessories.
- ☐ NP # 4: Luminence Analyser for Light Control.
- ☐ NP # 5: Ampex VR-1500 Portable Videotape Unit.
- ☐ NP # 6: Magnasync's New Recorder/Reproducer.
- ☐ NP # 7: Film Marking Perforator by Cummins.
- ☐ NP # 8: Portable Sound Amplifier/Lecternette.
- ☐ NP # 9: The new Luxor Rear Projection Unit.
- ☐ NP # 10: Improved Master Vu-Graph Projector.
- ☐ NP #11: Vari-Stroke Control, Mitchell Camera.
- ☐ NP # 12: Motorized Edit-Or for 16mm Work.
- ☐ NP # 13: Optical Reduction Printer
